# Foreword

*Taxing Wages*<sup>1</sup> is an annual publication that provides details of taxes paid on wages in the 38 member countries of the OECD. The information contained in the Report covers the personal income tax and social security contributions paid by employees, the social security contributions and payroll taxes paid by their employers and cash benefits received by families. The objective of the Report is to illustrate how personal income taxes, social security contributions and payroll taxes are calculated and to examine how these levies and family benefits affect household incomes and labour costs. The results also allow cross-country comparisons of the overall tax and benefit position of different household types.

The Report shows the amount of taxes, social security contributions, payroll taxes and cash benefits for eight household types, which differ by income level and household composition. It also presents the resulting average and marginal tax rates. Average tax rates show the share of gross wage earnings or total labour costs<sup>2</sup> that is taken in personal income taxes (before and after cash benefits), social security contributions and payroll taxes. Marginal tax rates show the share of an increase in gross earnings or total labour costs that is paid in these taxes.

This edition of the Report presents data on the tax and benefit position of employees in 2024, which it compares with corresponding data for the year 2023. The results for France for 2024 should be interpreted with caution because the indexation of the tax schedule and income tax parameters to inflation (of 1.8%) could not be incorporated in the *Taxing Wages* models for this Report. This omission, which was due to the late adoption of the 2025 budget bill, results in higher estimated tax rates in 2024 than those that were effectively in force.

The Report is structured as follows:

- Part I (Tax burden comparisons and trends) includes six chapters:
  - Chapter 1 contains an overview of the main results for 2024.
  - Chapter 2 contains the Special Feature on “Decomposition of personal income taxes”.
  - Chapter 3 reviews the main results for 2024, which are summarised in comparative tables and figures.
  - Chapter 4 presents a graphical exposition of the estimated tax burden on labour income in 2024 for gross wage earnings between 50% and 250% of the average wage.
  - Chapter 5 provides comparative tables showing the main results for 2023.
  - Chapter 6 shows historical trends in the tax burden for the period 2000-2024.
- Part II contains individual country tables specifying the wage levels considered and the associated tax burdens for eight separate household types, together with descriptions of each country's tax/benefit system.
- The Annex describes the *Taxing Wages* methodology and its limitations.

The Report has been prepared by the OECD's Centre for Tax Policy and Administration (CTPA) under the auspices of Working Party No.2 on Tax Policy Analysis and Tax Statistics (WP2) of the Committee on Fiscal Affairs. The Report was led by Edoardo Magalini and Leonie Cedano under the supervision of the Director, Manal Corwin; the Head of the Tax Policy and Statistics Division, Kurt Van Dender; and the Head of the Tax Data and Statistical Analysis Unit, Alexander Pick. The Special Feature was authored by Alexander Pick and Edoardo Magalini. The authors would like to acknowledge Michael Sharratt for his role in data management and dissemination and Rebekka Hviid Kanstrup for the publication formatting. The authors would like to thank other colleagues in CTPA for their support and valuable comments: Bert Brys, Karena Garnier, Hazel Healy, Sarah Perret, Michaël Sicsic and Carrie Tyler. The authors would also like to thank the delegates of WP2 for their inputs. The development of the *Taxing Wages* models used in this Report was funded by the European Union. The views expressed herein can in no way be taken to reflect the official opinion of the European Union.

# Executive Summary

Workers' post-tax income increased in a majority of OECD countries in 2024 as real wages before tax grew and effective tax rates on labour were broadly unchanged. This followed two years in which high inflation and fiscal drag had weighed on workers' take-home pay in many OECD countries, curtailing the recovery in post-tax incomes that followed the COVID-19 shock. Single-parent households with children remained a key focus for labour tax policy in 2024: as was also the case in 2023, this was the only household type for which the tax wedge<sup>3</sup> declined on average across the OECD and for which the tax wedge remained below its pre-pandemic level.

The OECD average tax wedge increased on average for seven of the eight household types examined in *Taxing Wages* but for six of these household types the increase was no greater than 0.05 percentage points (p.p.). For a single worker earning the average wage, the OECD average tax wedge edged up by 0.05 p.p. from the level in 2023 to 34.9%; this was the third consecutive year in which the average tax wedge for this household type has risen, following two years of decline during the COVID-19 pandemic in 2020 and 2021.

The tax wedge for a single worker earning the average wage increased in 20 of the 38 OECD countries between 2023 and 2024, decreased in 15 and stayed the same in three. The increase in the tax wedge exceeded one percentage point in Italy (1.61 p.p.), where the average wage rose above the threshold for the reduced social security contribution rate in 2024, and in Slovenia (1.44 p.p.), due to the introduction of a flat-rate compulsory employees' health insurance contribution. The decrease in the tax wedge for a single worker earning the average wage exceeded 1 p.p. in Finland (-1.57 p.p.), the United Kingdom (-1.74 p.p.) and Portugal (-1.75 p.p.). The decreases in Finland and the United Kingdom were due to a reduction in social security contributions, while in Portugal the main driver of the decrease was a revision of the tax schedule that reduced the tax rates applied to the first six brackets.

The OECD average tax wedge for a one-earner couple with two children at average wage levels rose by 0.16 p.p. to 25.8% in 2024, the largest increase among the household types, but declined in 20 countries. The difference between the OECD average tax wedge for this household type and that of the single worker earning the average wage narrowed by 0.11 p.p. to 9.2 p.p. in 2024, indicating a slight weakening of the fiscal advantage for households with children. The OECD average tax wedge for a two-earner couple with two children (one earning 100% of the average wage, the other earning 67% thereof) increased by 0.01 p.p. in 2024 to 29.5%. For this household type, the tax wedge decreased in 20 countries.

The only household for which the average tax wedge decreased in 2024 was the single parent of two children earning 67% of the average wage. This was also the only household type for which the OECD average tax wedge decreased in 2023, when it fell by 0.36 p.p. On average, the tax wedge for single parents decreased by 0.38 p.p. to 15.8% in 2024 and fell in 24 countries. Particularly large decreases in the tax wedge for this household type were observed in Poland (-7.2 p.p.) and Portugal (-4.1 p.p.), which in both cases was partly due to increases in the value of cash transfers for families with children.

The Report contains a Special Feature on decomposing personal income taxes, with a specific focus on tax credits and allowances. While most studies on the impact of personal income tax on progressivity and

post-tax incomes focus on marginal tax rates, this Special Feature uses the *Taxing Wages* models for 2024 to show how credits and allowances interact with the tax schedule to affect the average tax rates of different household types and influence the progressivity of labour taxation in OECD countries. The analysis demonstrates that these instruments make a significant difference to households' final post-tax net income and are a channel by which OECD countries reduce the tax liability of specific household types, in particular households with children. This is particularly the case for countries without other types of cash transfer, such as New Zealand; countries with relatively few tax brackets, such as the Slovak Republic; and countries with relatively high effective tax burdens on households without children, such as Belgium. The chapter also shows that credits and allowances collectively enhance the progressivity of labour taxation by between 28% and 44% depending on the household type, although credits tend to contribute more to the progressivity of PIT systems than allowances, especially when there is no means-testing mechanism to determine the amount of the relief.

## Key findings

### ***The average tax wedge for a single worker earning the average wage increased in a majority of countries in 2024***

- The tax wedge of a single worker with no children earning the average national wage was 34.9% of labour costs on average across the OECD in 2024.
- Between 2023 and 2024, the tax wedge for this household type increased in 20 countries, fell in 15 and was unchanged in three.
- In 2024, the largest tax wedge for this household type was observed in Belgium (52.6%), Germany (47.9%), France<sup>4</sup> (47.2%), Italy (47.1%) and Austria (47.0%).
- The personal average tax rate for this household type was 25.0% of gross wage earnings in 2024. Belgium had the highest rate, at 39.7%; Denmark, Germany, Lithuania and Slovenia were the only other countries with rates above 35%.

### ***The tax wedge for most household types with children fell in a majority of countries in 2024***

- The tax wedge fell in a majority of OECD countries for three of the four *Taxing Wages* household types with children.
- The tax wedge for a single parent earning 67% of the average wage declined in 24 countries and by 0.38 p.p. on average across the OECD to 15.8%. This was the only household type for which the OECD average tax wedge declined.
- The tax wedge for a one-earner couple at the average wage declined in 20 countries and was 25.7% on average across OECD countries. The tax wedge for a two-earner couple (one earning 100% of the average wage, the other earning 67% thereof) also declined in 20 countries and averaged 29.5% in 2024.
- The tax wedge for a married couple with children in which both earn the average wage rose in 20 countries, with the OECD average rising to 31.8%.
- The tax wedge for a one-earner married couple with children was lower than for a single worker in almost all OECD countries. The difference was greater than 15% of labour costs in Belgium, Luxembourg, Poland and the Slovak Republic.

### ***Average wages and post-tax incomes recovered in real terms across the OECD***

- The average wage increased in 37 OECD countries in nominal terms in 2024 from the previous year and increased in 34 countries in real terms. In 2022 and 2023, real wages declined in a majority of OECD countries.
- The post-tax income of a single worker earning the average wage increased in 28 countries between 2023 and 2024 in real terms, having declined in 21 countries in 2023 and in 33 countries in 2022.

### ***Decomposing personal income taxes (Special Feature)***

- The Special Feature examines the impact of credits and allowances on personal income tax rates of three household types: a single worker earning the average wage, a single parent with two children earning 67% of the average wage, and a one-earner married couple with two children where the principal earns the average wage.
- Tax credits reduced the tax liability of a single worker earning the average wage by 1.9% on average across the OECD in 2024. The equivalent reduction was 4.7% for the one-earner married couple and 7.3% for the single parent.
- Tax allowances amounted to 15.9% of taxable income for the single worker earning the average wage, 21.7% for the one-earner married couple and 27.7% for the single parent.
- For a single worker earning the average wage, tax allowances amounted to 5.4% of post-tax net income on average across OECD countries in 2024 while tax credits amounted to 2.6%. For the single parent, tax credits amounted to 7.4% of net income while allowances were 5.7%; for the one-earner married couple, credits were 5.4% of net income and allowances were 5.2%.
- Excluding credits and allowances reduces the structural progressivity of personal income tax among almost all OECD countries for all three household types; excluding credits has a greater impact on progressivity than excluding allowances.

## Notes

<sup>1</sup> Earlier editions were published under the title *The Tax/Benefit Position of Employees* (1996–1998 editions) and *The Tax/Benefit Position of Production Workers* (editions published before 1996).

<sup>2</sup> The reference wage for these calculations is provided by countries. The estimates for the average wage refer to a full-time employee (engaged either in manual or non-manual activities) who works in either industry sectors B-N inclusive with reference to the International Standard Industrial Classification of All Economic Activities, Revision 4 (ISIC Rev.4) or in industry sectors C-K inclusive with reference to the International Standard Industrial Classification of All Economic Activities, Revision 3 (ISIC Rev.3). More information is contained in Chapter 1 of the Report and in the Annex.

<sup>3</sup> The tax wedge is the primary indicator presented in this Report. It measures the difference between the labour costs to the employer and the corresponding net take-home pay of the employee. It is calculated as the sum of the total personal income tax and social security contributions paid by employees and employers, minus cash benefits received, as a proportion of the total labour costs for employers.

<sup>4</sup> France's tax schedule for 2024 has been adjusted for inflation in the 2025 budget bill. However, due to the late adoption of the 2025 budget bill, the indexation of the tax schedule and income tax parameters to inflation (of 1.8%) could not be incorporated into the *Taxing Wages* model for this Report. This results in higher estimated tax rates than those effectively in force.

# Part I Effective tax rates on labour income - Comparisons and trends

# 1 Overview

---

This chapter presents and analyses the main indicators of labour taxation across OECD countries in 2024. Most emphasis is given to the tax wedge, which measures the difference between labour costs to the employer and the corresponding net take-home pay of the employee. The chapter also examines the net personal average tax rate, which expresses personal income tax and employee social security contributions net of cash benefits as a percentage of gross wage earnings. The analysis focuses on a single worker with no children at average earnings; a one-earner married couple with two children, at the same income level; and a two-earner couple with two children, where one spouse earns the average wage and the other 67% thereof. The chapter also includes analysis of changes in the average wage in OECD countries in 2024.

---

This Report provides unique information for the 38 OECD countries on the income taxes paid by workers, their social security contributions, the transfers they receive in the form of cash benefits, as well as the social security contributions (SSCs) and payroll taxes paid by their employers. The taxpayer-specific detail in this Report complements the information provided annually in *Revenue Statistics*, which provides internationally comparable data on tax levels and tax structures in OECD countries.

Part I of the Report presents detailed information about the effective tax rates on labour income in OECD countries in 2024 for eight illustrative household types earning comparable levels of income as well as the implied total labour costs for employers. It also provides detailed analysis of changes in effective tax rates between 2023 and 2024 as well as changes since 2000. Part II provides detailed information on labour taxation systems in OECD countries. The methodology followed in this Report is explained in the Annex. The results for France for 2024 should be interpreted with caution because the indexation of the tax schedule and income tax parameters to inflation (of 1.8%) could not be incorporated into the *Taxing Wages* models for this Report. This omission, which was due to the late adoption of the 2025 budget bill, results in higher estimated tax rates in 2024 than those that were effectively in force.

This chapter begins with an introduction to the *Taxing Wages* methodology, which is followed by a review of the indicators of effective tax rates across OECD countries in 2024. The review analyses the tax wedge and the personal average tax rates for a single worker without children who earns the average wage. It also examines the corresponding indicators for a one-earner couple earning the average wage with two children and a two-earner married couple, also with two children, where one spouse earns the average wage and the other 67% thereof. The chapter concludes by analysing changes in nominal and real average wages as well as changes in post-tax income by country in 2024 and by setting out the industry classification on which the wage data is based.

## Introduction

The *Taxing Wages* methodology focuses on full-time employees. It is assumed that their annual income from employment is equal to a given percentage of the average full-time adult gross wage earnings for each OECD economy, referred to as the average wage (AW). This covers both manual and non-manual workers for either industry sectors C-K inclusive with reference to the International Standard Industrial Classification of All Economic Activities, Revision 3 (ISIC Rev.3) or industry sectors B-N inclusive with reference to the International Standard Industrial Classification of All Economic Activities, Revision 4 (ISIC Rev.4).<sup>1</sup> Further details are provided in Table 1.8 as well as in the Annex of this Report. Additional assumptions are made about the personal circumstances of these wage earners in order to determine their tax and benefit position.

In *Taxing Wages*, the term ‘tax’ includes personal income tax, SSCs and payroll taxes (which are aggregated with employer SSCs in the calculation of tax rates) payable on gross wage earnings. Consequently, any income tax that might be due on non-wage income and other kinds of taxes – such as corporate income tax, net wealth tax and consumption taxes – are not taken into account. The transfers included are those paid by general government as cash benefits, usually in respect of dependent children.

For most OECD countries, the tax year is equivalent to the calendar year, the exceptions being Australia, New Zealand and the United Kingdom. In the case of New Zealand and the United Kingdom, where the tax year starts in April, the calculations apply a ‘forward-looking’ approach. This implies that, for example, the tax rates reported for 2024 are those for the tax year 2024-2025. However, in Australia, where the tax year starts in July, a ‘backward-looking’ approach is adopted to present more reliable results; the year 2024 in respect of Australia is the 2023-2024 tax year.

*Taxing Wages* presents several measures of taxation on labour. Most emphasis is given to the tax wedge, a measure of the difference between labour costs to the employer and the corresponding net take-home

pay of the employee. This indicator is calculated by expressing the sum of personal income tax, employee plus employer SSCs together with any payroll tax, minus benefits as a percentage of labour costs. Employer SSCs and – in some countries – payroll taxes are added to the gross wage earnings of employees in order to determine a measure of total labour costs.

The average tax wedge measures that part of total labour costs which is taken in tax and SSCs net of cash benefits, while the marginal tax wedge measures that part of an *increase* in total labour costs that is paid in taxes and SSCs less cash benefits. The tax wedge only includes payments that are classified as taxes according to the OECD Interpretative Guide. Employees and employers may also make non-tax compulsory payments (NTCPs)<sup>2</sup> that may affect the indicators presented in this Report, such as the tax wedge. An accompanying paper to *Taxing Wages* presents “compulsory payment indicators” that combine taxes and NTCPs. It is available at: <https://www.oecd.org/content/dam/oecd/en/topics/policy-issues/tax-policy/non-tax-compulsory-payments.pdf>.

This Report also includes analysis of the personal average tax rate and the net personal average tax rate. The personal average tax rate is the term used when the personal income tax and employee SSCs are expressed as a percentage of gross wage earnings. The net personal average tax rate corresponds to the above measure net of cash benefits. The net personal marginal tax rate shows that part of an *increase* in gross wage earnings that is paid in personal income tax and employee SSCs net of cash benefits.

## Taxation of single workers

### *The tax wedge*

Table 1.1 shows that the tax wedge between the labour costs to the employer and the corresponding net take-home pay for single workers without children, at average wage earnings levels, varied widely across OECD countries in 2024 (see column 1). While the tax wedge exceeded 45% of labour costs in Austria, Belgium, France<sup>3</sup>, Germany and Italy, it was lower than 20% in Chile and Colombia. The largest tax wedge was observed in Belgium (52.6%) and the lowest in Colombia (0.0%). In Colombia, a single worker earning the average wage did not pay personal income taxes in 2024, while their contributions to pension, health and employment risk insurance are considered to be NTCPs<sup>4</sup> and therefore not counted as taxes in the *Taxing Wages* models. Table 1.1 shows that the average tax wedge as a percentage of labour costs in OECD countries was 34.9% in 2024.

Changes in the tax wedge as a percentage of labour costs between 2023 and 2024 for a single worker earning the average wage without children are described in column 2 of Table 1.1. The OECD average tax wedge for this household type increased by 0.05 percentage points (p.p.) in 2024, having increased by 0.15 p.p. in 2023 and by 0.12 p.p. in 2022. Between 2023 and 2024, the tax wedge increased in twenty OECD countries and fell in fifteen while remaining the same in three (Colombia, Costa Rica and Hungary).

Hungary and Latvia are the only OECD countries where there was no change in the thresholds, rates and amounts for personal income tax, SSCs or cash transfers in 2024, implying that changes in the tax wedge were attributable solely to a change in the average wage. In Australia, Korea, Poland, Slovenia and the United Kingdom, there was no change in the rules concerning personal income taxes but there were adjustments to other components of the tax wedge. More in general, policy changes in 2024 (whether reforms or parametric adjustments) affected at least one of the components of the tax wedge in almost all countries. This makes it difficult to ascribe changes in the average tax wedge in a specific country to either a change in policies or in average earnings, especially since some policy rates might be automatically indexed to wage growth (OECD, 2023<sup>[1]</sup>).

Increases in the tax wedge for a single worker earning the average wage ranged from 0.04 p.p. in the United States to 1.61 p.p. in Italy. The increase in the tax wedge was larger than 0.5 p.p. in eight countries,

while only Italy and Slovenia recorded an increase larger than 1 p.p. In Slovenia, a 1.44 p.p. increase in the tax wedge was mainly due to the introduction of a flat-rate compulsory employees' health insurance contribution of EUR 420 per year in 2024. In Italy, the increase was mainly due to the fact that the average wage earner in 2024 no longer benefited from the reduced employee SSC rate as their salary was above the threshold of EUR 35 000, having been below this threshold in 2023.

In fourteen out of the twenty countries where the tax wedge increased, the rise was driven by higher personal income tax as a percentage of labour costs (see column 3 of Table 1.1). In the countries where the rules concerning the tax schedule did not change, such as Australia, Greece, Korea, Latvia, Mexico, Poland, Slovenia and Spain, this was due to increases in the nominal average wage between 2023 and 2024. Higher average wages increase personal income tax through the progressivity of income tax systems if income tax thresholds increase by less than average earnings (OECD, 2023<sup>[1]</sup>). In Estonia, the higher personal income tax was due to the removal of certain tax allowances while in Lithuania it was primarily the result of a higher proportion of earnings becoming subject to tax while the value of tax allowances and tax credits fell relative to earnings. Chapter 2 of this Report examines the role of tax reliefs in determining PIT rates in OECD countries.

In Canada, Czechia, Germany, Italy, the Slovak Republic and Slovenia, the increase in the tax wedge was mostly due to higher employee or employer SSCs. In Canada, employee and employer SSCs increased mainly due to the introduction of a second bracket for pension contributions at a rate of 4%. In Czechia, employee SSCs increased due to the re-introduction of sickness insurance. In Germany, the increase in both employee and employer SSCs was mainly due to the increase in the sickness insurance rate. In the Slovak Republic, the employer health contribution is being gradually increased from 10% to 11% between 2024 and 2027 inclusive while the contribution rate to Pillar I of the pension system was increased from 8.5% to 10% in 2024. The causes of the increases in Italy and Slovenia are discussed above.

In ten of the fifteen OECD countries where the tax wedge decreased as a percentage of labour costs, the decrease was mostly derived from lower personal income tax (Austria, Belgium, Iceland, Ireland, Luxembourg, Japan, New Zealand, Portugal, Sweden and Switzerland).

The decreases in the tax wedge observed in 2024 exceeded 1 p.p. in Finland (-1.57 p.p.), the United Kingdom (-1.74 p.p.) and Portugal (-1.75 p.p.). In Finland, the decrease in the tax wedge was due to a reduction in employee and employer health-related SSCs. In the United Kingdom, similarly to the case of Finland, the decrease was mainly due to the reduction in employee SSCs, from a rate of 12% to 8%. In Portugal, the main driver of the decrease was a revision of the tax schedule in 2024 that reduced the tax rates applied to the first six brackets.

Table 1.2 and Figure 1.1 show the components of the tax wedge across OECD countries in 2024: personal income tax, employee SSCs and employer SSCs (including payroll taxes where applicable), as a percentage of labour costs for a worker without children earning the average wage. Labour costs in Table 1.2 are expressed in US dollars with equivalent purchasing power.

The percentage of labour costs paid in personal income tax varied considerably across OECD countries in 2024. The lowest figures were in Colombia and Costa Rica (both 0.0%) and Chile (0.2%), with Czechia, Greece, Japan, Korea, Mexico, Poland and the Slovak Republic also below 10%. The highest share was in Denmark (35.4%), with Australia, Belgium, Iceland, Ireland and New Zealand also above 20%. The percentage of labour costs paid in employee SSCs also varied widely, ranging from 0.0% in Australia, Colombia, Denmark and New Zealand to 19.2% in Lithuania and 20.3% in Slovenia. Employers in France<sup>5</sup> paid 26.7% of labour costs in SSCs, the highest amongst OECD countries. Employer SSCs accounted for more than 20% of labour costs in nine other countries: Austria, Belgium, Costa Rica, Czechia, Estonia, Italy, the Slovak Republic, Spain and Sweden.

Combined employee and employer SSCs exceeded 20% of labour costs in 23 countries and represented at least one-third of labour costs in Austria, Czechia, France<sup>6</sup>, Germany, Slovak Republic and Slovenia.

## ***Personal average tax rates***

The personal average tax rate is defined as personal income tax plus employee SSCs as a percentage of gross wage earnings. Table 1.3 shows the personal average tax rate in 2024 for a single worker without children at the average wage level, with the average worker's gross wage earnings expressed in US dollars with equivalent purchasing power. Figure 1.2 provides a graphical representation of the personal average tax rate decomposed between income tax and employee SSCs.

Table 1.3 and Figure 1.2 show that, on average, the personal average tax rate for a single worker at average earnings in OECD countries was 25.0% in 2024. Belgium had the highest rate, at 39.7% of gross wage earnings; Denmark, Germany, Lithuania and Slovenia were the other countries with rates above 35%. The lowest personal average tax rates were in Mexico (12.2%), Costa Rica (10.7%), Chile (7.2%) and Colombia (0.0%). The personal average tax rate was zero for Colombia as the single worker did not pay personal income tax at the average wage level in 2024, as discussed above.<sup>7</sup>

The impact of taxes and benefits on a worker's take-home pay varies greatly among OECD countries. Such wide variations in the size and make-up of the tax wedge in different countries partly reflect differences in:

- The overall ratio of aggregate tax revenues to Gross Domestic Product; and
- The share of personal income tax and SSCs in the national tax mix.

In 2024, the share of income tax within the personal average tax rate was higher than the share of employee SSCs for 23 of the 38 OECD member countries. No employee SSCs were levied in Australia, Colombia, Denmark and New Zealand and their level was below 5% of gross earnings in Estonia, Iceland, Ireland and Mexico. In contrast, a single worker at the average wage level paid substantially more in employee SSCs than in personal income tax (i.e., more than six p.p.) in five countries: Chile, Costa Rica, Japan, Poland and Slovenia. In seven countries – Czechia, Greece, Korea, Lithuania, Portugal, the Slovak Republic and Türkiye – the respective shares of personal income tax and employee SSCs as a percentage of gross earnings were very close (i.e., differences smaller than 3 p.p.).

## Single versus one-earner couple taxpayers

Many OECD countries provide a fiscal benefit to households with children through advantageous tax treatment and/or cash benefits. Table 1.4 compares the tax wedge as a percentage of labour costs for a one-earner married couple with two children with that of a single individual without children, at average wage levels. The tax wedge for the couple with children is generally smaller than that observed for the individual without children: the OECD average tax wedge as a percentage of labour costs for the one-earner married couple with two children was 25.7% in 2024, compared with 34.9% for the single worker. This gap decreased by 0.11 p.p. between 2023 and 2024 due to the fact that the average tax wedge for the one-earner married couple with two children increased slightly more than the tax wedge for the single worker without children between 2023 and 2024.<sup>8</sup>

The tax savings realised by a one-earner married couple with two children compared with a single worker without children was at least 20% of labour costs in Poland and the Slovak Republic, and it exceeded 15% of labour costs in Belgium and Luxembourg. The tax wedge for a one-earner married couple with two children was the same as for a single worker on the average wage in Costa Rica, Mexico and Türkiye.

The tax wedge of a one-earner married couple with two children increased by 0.16 p.p. on average and rose in 16 countries between 2023 and 2024 (column 4). In 20 countries, there was only a small change (not exceeding plus or minus one percentage point). There were increases of more than one percentage point in seven countries: Czechia, Estonia, Hungary, Italy, Latvia, the Slovak Republic and Slovenia.

In Czechia, the tax wedge of an average one-earner married couple with two children increased by 7.38 p.p. due to the removal of the pre-school tax credit and because the tax credit for a dependent spouse was limited to families with children under the age of three, which meant that the households considered by the *Taxing Wages* models were no longer eligible.<sup>9</sup> In Estonia, the increase (3.72 p.p.) was caused by the cessation of the supplementary basic allowance and the child allowance, which were targeted at families with children. In Hungary, the increase (1.11 p.p.) was due to growth in labour costs while cash transfers remained unchanged in nominal terms. In Italy, the increase (1.53 p.p.) was mainly due to the loss of the reduced employee SSC rate for this household due to their gross earnings exceeding the eligibility threshold. In Latvia, the increase (1.60 p.p.) was partly due to higher employee SSCs. In the Slovak Republic, the tax wedge increased by 2.52 p.p. due to the temporary increase of the employer's health insurance contribution. In Slovenia, the increase for the one-earner married couple with two children (3.07 p.p.) was mainly due to the introduction of the flat-rate compulsory health SSC of EUR 420 per year.

Decreases of at least one percentage point in the tax wedge of a one-earner married couple receiving the average wage with two children occurred in eight countries: Finland, Iceland, Japan, Korea, the Netherlands, Poland, Portugal and the United Kingdom. In Finland (-1.61 p.p.), the tax wedge decreased due to lower employee and employer SSCs, in Iceland (-1.48 p.p.), the decrease was due to an increase in the supplementary child allowance and in Japan (-2.20 p.p.) it was due to the introduction of special tax credits for central and local taxes. In Korea (-1.72 p.p.), the decrease was due to a reform of the refundable child tax credit, which became more generous for lower-earning households with two children. In the Netherlands (-1.11 p.p.), it was due to an increase in the child-related cash transfers while in Poland (-4.03 p.p.) it was due to an increase of cash transfers provided via the Family 500 Plus programme. In Portugal (-2.36 p.p.), it decreased due to the lower tax rates applied to the first six brackets of the tax schedule as well as an increase in the generosity of the child-related cash transfer. In the United Kingdom, the decrease (-1.35 p.p.) was driven by a reduction in employee SSCs, from 12% to 8%.

A comparison of changes in the tax wedge between 2023 and 2024 for one-earner married couples with two children and single persons without children, at the average wage level, is shown in column 6 of Table 1.4. The fiscal preference for families increased in seventeen of the 38 OECD countries: Australia, Belgium, Colombia, Denmark, Finland, France<sup>10</sup>, Greece, Iceland, Italy, Japan, Korea, Lithuania, the Netherlands, New Zealand, Norway, Poland and Portugal.

**Figure 1.3. Income tax plus employee contributions less cash benefits, 2024**

As % of gross wage earnings, by household type

Notes: Countries ranked by decreasing rates for single taxpayer without children.

The household type 'single no child' corresponds to a wage level of 100% of average wage and 'married one earner couple 2 children' corresponds to a combined wage level of 100%-0% of average wage.

StatLink  <https://stat.link/4ia7yh>

Figure 1.3 compares the net personal average tax rate for a single worker earning the average wage with that of a one-earner married couple with two children at the same income level. Due to tax reliefs and cash benefits for families with children, the one-earner married couple's disposable income exceeded that of the single worker by more than 20% of earnings in the Slovak Republic (31.2%), Poland (26.6%) and Luxembourg (22.5%); and by more than 15% in Belgium (19.8%), Austria (18.2%), Germany (17.6%), Italy (15.4%) and Portugal (15.2%). The disposable income of the one-earner married couple exceeded that of the single worker by less than 10% of earnings in 15 countries: Hungary (9.7%), Denmark (9.4%), the Netherlands (8.9%), Estonia (8.0%), Japan (8.0%), Australia (7.2%), Sweden (5.9%), Spain (5.9%), Israel (5.3%), Norway (4.7%), Chile (4.6%), Finland (4.5%), Colombia (4.4%), the United Kingdom (4.32%) and Greece (2.4%). The disposable income was the same for both household types in Costa Rica, Mexico and Türkiye, as in each country their net personal average tax rates were identical.

## Taxation of two-earner couples

The preceding sections focused on two households with comparable levels of income: the single worker at 100% of the average wage and the married couple with one earner at 100% of the average wage, with two children. This section extends the analysis to examine the tax wedge and personal average tax rate for a third household type: the two-earner married couple, earning 100% and 67% of the average wage respectively, with two children.

### *The tax wedge*

For this household type, the OECD average tax wedge as a percentage of labour costs was 29.5% in 2024 (Figure 1.4 and Table 1.5). Belgium had a tax wedge of 44.8%, which was the highest among OECD countries for this household type. The other countries with a tax wedge exceeding 40% were France<sup>11</sup> and Germany (41.0% and 40.9%, respectively). The lowest tax wedge for this household type was observed in Colombia (-5.2%). In Colombia, the tax wedge was negative because this household type did not pay income taxes at that level of earnings (although it paid contributions that are not considered to be taxes) and received cash benefits that were paid on top of their wages. The other countries where the tax wedge for this household type was below 20% were New Zealand (18.6%), Korea (18.3%), Switzerland (17.1%), Israel (15.6%) and Chile (4.4%).

Figure 1.4 shows the average tax wedge and its components as a percentage of labour costs for the two-earner married couple in 2024. On average across OECD countries, income tax represented 10.6% of labour costs and the sum of the employee and employer SSCs represented 21.4%. The OECD tax wedge is net of cash benefits, which represented 2.5% of labour costs in 2024. The cash benefits that are included in the *Taxing Wages* models are those universally paid to workers in respect of dependent children between the ages of six to eleven inclusive. In-work benefits that are paid to workers regardless of their family situation are also included in the calculations.

The OECD average tax wedge of the two-earner married couple increased by 0.01 p.p. in 2024 from the previous year, as indicated in Table 1.5 (column 2). For this household type, the tax wedge increased in 17 countries and decreased in 20. The increase exceeded one percentage point in six countries: Türkiye (1.10 p.p.), Latvia (1.34 p.p.), Estonia (1.78 p.p.), the Slovak Republic (1.91 p.p.), Slovenia (1.96 p.p.) and Czechia (2.43 p.p.). In Türkiye, the tax wedge increased due to the progressivity of the tax schedule, as the average wage increased by a larger proportion than the earnings thresholds in the tax schedule. Similarly, in Latvia, the increase was mostly due to the fact that the tax schedule did not change between 2023 and 2024. In Estonia, the tax wedge increased primarily due to the elimination of the supplementary basic allowance and the child allowance, as mentioned above. In the Slovak Republic, the increase was mainly due to higher employer SSCs while cash transfers did not change. In Slovenia,

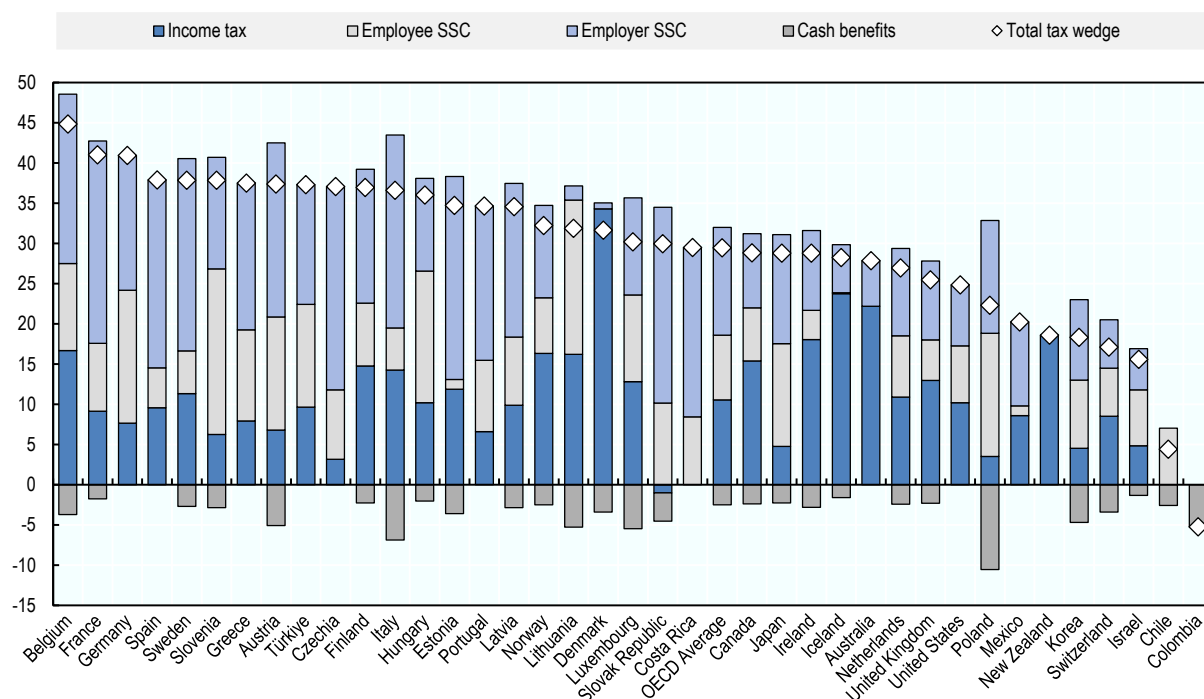

the average tax wedge increased due to the introduction of a flat-rate compulsory health SSC, as mentioned above. In Czechia, the increase was primarily due to the removal of the pre-school tax credit.

Among the countries where the tax wedge rose for two-earner married couples with children in 2024, the increase in income tax as a percentage of labour costs accounted for most of the increase in twelve: Australia, Czechia, Estonia, France<sup>12</sup>, Germany, Hungary, Korea, Latvia, Mexico, Spain, Türkiye and the United States. Meanwhile, an increase in SSCs was the main factor behind the higher tax wedge for this household type in four countries: Canada, Italy, the Slovak Republic and Slovenia. In Ireland, the increase (0.16 p.p.) was driven by a decrease in the cash transfers received by this household.

In most countries where the tax wedge for families with children decreased between 2023 and 2024, this resulted from changes in income tax systems and SSCs, as observed for the single workers, as well as from increased cash benefits or tax provisions for dependent children. Decreases of more than one percentage point were observed in six countries: Japan (-1.27 p.p.), Portugal (-1.28 p.p.), Iceland (1.54 p.p.), Finland (-1.66 p.p.), the United Kingdom (-1.66 p.p.) and Poland (-2.39 p.p.). As observed in previous sections, the decrease in the tax wedge resulted from a reduction of SSCs in Finland and the United Kingdom, an increase in tax reliefs for families in Iceland and Japan, an increase in cash benefits in Poland and a reduction of tax rates in Portugal.

## Personal average tax rates

The net personal average tax rate for a two-earner married couple with two children where one spouse earns the average wage and the other earns 67% thereof, was 18.6% of gross wage earnings on average in 2024. Table 1.6 shows the net personal average tax rate for each OECD country and its components as a percentage of gross wage earnings. Household gross wage earnings in column 5 are expressed in US dollar terms with equivalent purchasing power. Unlike the results shown in Table 1.3, cash benefits are taken into account in Table 1.6 and reduce the impact of income taxes and employee SSCs (column 2 plus column 3, minus column 4).

The net personal average tax rate of the two-earner married couple varied greatly among OECD countries in 2024, ranging from -5.2% in Colombia to 31.1% in Denmark. In Colombia, the net personal average tax rate was negative because this household type did not pay income taxes at that level of earnings, paid contributions that are not considered to be taxes<sup>13</sup> and received cash benefits that were paid on top of their wages. The disposable income of the household after tax represented 105.2% of the couple's gross wage earnings in Colombia while it represented 68.9% in Denmark. The net personal average tax rate was equal to or lower than 10% in Poland (9.6%), Korea (9.2%), the Slovak Republic (7.4%) and Chile (4.4%).

The *Taxing Wages* indicators focus on the structure of labour taxation. To assess the overall impact of the government sector on people's welfare, other factors including indirect taxes (such as value added tax) should also be taken into account, as should taxation of other forms of income, such as capital income (Hourani et al., 2023<sup>[4]</sup>). NTCPs are not included in the calculations presented in this Report but further analysis of those payments is presented in the accompanying online paper: <https://www.oecd.org/content/dam/oecd/en/topics/policy-issues/tax-policy/non-tax-compulsory-payments.pdf>.

## Wages

The average wage increased in 37 OECD countries between 2023 and 2024 in nominal terms, and it increased in 33 of the 38 countries in real terms. The real post-tax income for a single worker earning the average wage increased in 28 countries in real terms over the same period, having declined in 21 countries in 2023 and in 33 countries in 2022.

Table 1.7 shows gross wage earnings in national currency of the average worker across OECD countries in 2023 and 2024. The figures for 2024 are estimated by the OECD Secretariat by applying the change in the compensation per employee in the total economy as presented in the *OECD Economic Outlook* Volume 2024 Issue 2 database (OECD, 2024<sup>[2]</sup>) to the final average wage values provided for previous years by OECD countries. More information on the value of the average wage and the estimation methodology is included in the Annex of this Report.

The annual change in gross nominal wages in 2024 – shown in column 3 – ranged from -0.03% in Finland to 82.9% in Türkiye. To a large extent, changes in nominal wage levels in OECD countries were higher than inflation rates (see column 4 of Table 1.7). The annual change in real wage levels (before personal income tax and employee SSCs) was within the range of -2% to +2% in 19 countries (see column 5 of Table 1.7). The real wage decreased the most in Belgium (-1.02%), while real wages increased by more than 2% in 19 countries.

By combining changes in the average wage in 2024 with the changes in the net personal average tax rate discussed earlier in this chapter, it is possible to calculate changes in workers' post-tax real income between 2023 and 2024. However, it should be noted that this indicator provides only a partial view of changes in workers' overall disposable income because it does not take into account government policies that do not meet the criteria for inclusion in the *Taxing Wages* models. These government policies may

nonetheless have a significant impact on workers' disposable income, thereby offsetting declines in real wages. Such 'non-standard' measures are typically linked to consumer spending and may include policies to reduce the cost of staple goods or to lower the cost of health and education. Further information on the benefits included in the *Taxing Wages* models is provided in Annex A, while country-specific information can be found in the country chapters located in Part II of the Report.

In ten OECD countries, the average single worker without children had lower real post-tax income in 2024 than in 2023, either because the personal average tax rate (column 6) increased or remained unchanged while the real wage before tax decreased (column 5), or because the personal average tax rate increased by more than the real wage before tax.

In contrast, the average single worker without children had higher real post-tax income in 2024 in 28 countries: Austria, Canada, Chile, Colombia, Costa Rica, Denmark, Finland, Germany, Hungary, Iceland, Ireland, Israel, Japan, Latvia, Lithuania, Luxembourg, the Netherlands, New Zealand, Norway, Poland, Portugal, the Slovak Republic, Slovenia, Sweden, Switzerland, Türkiye, the United Kingdom and the United States.

- The real wage before tax decreased by less than the personal average tax rate in Finland, Iceland and Luxembourg.
- The personal average tax rate decreased or remained unchanged while the real wage before tax increased in Austria, Colombia, Costa Rica, Hungary, Ireland, Israel, the Netherlands, New Zealand, Norway, Portugal, the Slovak Republic, Sweden, Switzerland and the United Kingdom.
- The personal average tax rate increased by less than the real wage before tax in Canada, Chile, Denmark, Germany, Latvia, Lithuania, Poland, Slovenia, Türkiye and the United States.

When comparing wage levels, it is important to note that the definition of average wage earnings may vary between countries due to data limitations. For instance, some countries do not include the wages earned by supervisory and managerial workers or do not exclude the wage earnings of part-time workers (see Table A.4 in the Annex).

Table 1.8 provides more information on whether average wages for the years 2000 to 2024 are based on industry sectors C-K inclusive with reference to the International Standard Industrial Classification of All Economic Activities, Revision 3 (ISIC Rev.3), industry sectors B-N inclusive with reference to the International Standard Industrial Classification of All Economic Activities, Revision 4 (ISIC Rev.4), or on alternative classification systems where countries are not able to provide data in line with the two previously mentioned approaches.<sup>14</sup>

United States	2000-2006	2007-2024

1. For Australia, data is based on ANZSIC06 such that the categories substantially overlap with ISIC 4, sectors B-N.

2. For Austria, 2000-2003 average wage values are not based on the NACE (ISIC) classification.

3. For Chile, the values for 2000 to 2008 are estimates deriving from the annual changes in the average wages based on "CIU Rev.3" (2009=100) between 2000 and 2008 and the average wage for 2009 based on CIU Rev.4 (2016=100). From 2009, the values are based on ISIC4.CL2012 sectors B to R, excluding O (8422) "Defense Activities" and O (8423) "Public order and safety activities".

4. For Colombia, average wage values are based on ISIC rev. 3. The "Agriculture, hunting and forestry", "Other community, social and personal service activities" and "Activities not adequately defined" sectors are excluded.

5. For Costa Rica, the average wage from 2000 onwards refers to the earnings of workers within the formal sector. The average worker's wage was calculated based on microdata from national household surveys.

6. For Denmark, average wage values are based on sectors B-N and R-S (NACE rev 2).

7. For Greece, average annual earnings refer to full time employees for the sectors B to N of NACE Rev 2, including Division 95 and excluding Divisions 37, 39 and 75 from 2008 onwards.

8. For Iceland, this uses a national classification system that corresponds with the NACE rev. 2 classification system.
9. For Ireland, values from 2008 onwards are based on CSO table EHA05 for NACE rev.2 B-N. Values for prior years are Secretariat estimates based on the growth rates of the average wages for sectors C to E in reference to NACE.
10. Information on data for Israel is available at: <http://oe.cd/israel-disclaimer>.
11. For Korea, average wage values are based on 6<sup>th</sup> Korean Standard Industrial Classification (KSIC) C-K for 2000-2001, 8<sup>th</sup> KISC C-M for 2002 to 2007. Average wage data from 2008 to 2010 is based on the 9<sup>th</sup> KISC B-N (samples of firms with five or more permanent employees). Average wage data of 2011 to 2019 is based on the 9<sup>th</sup> KISC B-N (samples of firms with one or more permanent employees). Average wage data of 2020 and the estimate for 2021 are based on the 10<sup>th</sup> KISC B-N (samples of firms with one or more permanent employees).
12. For Latvia, values are based on NACE rev.2 and cover the private sector that includes commercial companies with central or local government capital participation up to 50%, commercial companies of all types without central or local government capital participation, individual merchants, and peasant and fishermen farms with 50 or more employees.
13. For Mexico: Average wage values from 2000-2023 are based on the Mexican Classification of Economic Activities (Clasificación Mexicana de Actividades Económicas [CMAE]), which is based on one of the first versions of ISIC.
14. For the Netherlands, average wages from 2012 onwards include all economic activities (sectors A to U from SBI2008). Values for the private sector only (sectors B to N) are not available.
15. For New Zealand: see the note for Australia, which applies from 2004.
16. For Slovak Republic, average wage values are based on SK NACE Rev. 2 classification (B to N) without the earnings of the self-employed. However, employment data used for the calculation of the weighted mean still include the self-employed.
17. For Türkiye, the average wage is based on the average production worker wage ISIC rev. 3.1 sector D for years 2000 to 2006.

## Notes

<sup>1</sup> Not all national statistical agencies use ISIC Rev.3 or Rev.4 to classify industries. However, the Statistical Classification of Economic Activities in the European Community (NACE Rev.1 or Rev.2), the North American Industry Classification System (US NAICS 2012). The Australian and New Zealand Standard Industrial Classification (ANZSIC 2006) and the Korean Standard Industrial Classification (6th to 9th KISC) include a classification which broadly conforms either with industries C-K in ISIC Rev. 3 or industries B-N in ISIC Rev.4.

<sup>2</sup> Non-tax compulsory payments are required and unrequited compulsory payments to privately-managed funds, welfare agencies or social insurance schemes outside general governments and to public enterprises (<https://www.oecd.org/content/dam/oecd/en/topics/policy-issues/tax-policy/non-tax-compulsory-payments.pdf>).

<sup>3</sup> France’s tax schedule for 2024 has been adjusted for inflation in the 2025 budget bill. However, due to the late adoption of the 2025 budget bill, the indexation of the tax schedule and income tax parameters to inflation (of 1.8%) could not be incorporated into the *Taxing Wages* model for this Report. This results in higher estimated tax rates than those effectively in force.

<sup>4</sup> In Colombia, the general social security system for healthcare is financed by public and private funds. The pension system is a hybrid of two different systems: a defined contribution, fully-funded pension system; and a pay-as-you-go system. Each of those contributions are mandatory and more than 50% of total contributions are made to privately managed funds. Therefore, they are considered to be non-tax compulsory payments (NTCPs) (further information is available in the country details in Part II of the report). In addition, in Colombia, all payments for employment risk are made to privately managed funds and are considered to be NTCPs. Other OECD countries also have NTCPs (please see <https://www.oecd.org/content/dam/oecd/en/topics/policy-issues/tax-policy/non-tax-compulsory-payments.pdf>).

<sup>5</sup> See note 3.

<sup>6</sup> See note 3.

<sup>7</sup> See note 4.

<sup>8</sup> The fiscal advantage for a couple with children may disincentivise the non-working spouse from taking-up employment. The tax wedge for a second earner in a married couple may be significantly higher than for a single worker at the same income level and with the same number of children, which may reduce women's labour participation and thus contribute to persistent gender inequality across many OECD countries in terms of labour outcomes. This topic is discussed in detail in Chapter 2 of the *Taxing Wages 2024* report (OECD, 2024<sup>[5]</sup>).

<sup>9</sup> For household types containing two children, the children are assumed to be aged between 6 and 11 years old in the *Taxing Wages* models.

<sup>10</sup> See note 3.

<sup>11</sup> See note 3.

<sup>12</sup> See note 3.

<sup>13</sup> See note 4.

<sup>14</sup> Most OECD countries have calculated average wage earnings on the basis of sectors B-N in the ISIC Rev. 4 Industry Classification since 2008 or earlier. Some countries have revised the average wage values for prior years as well. Average wage values based on the ISIC Rev. 4 Classification or any variant are available for years back to 2000 for Australia, the Czech Republic, Estonia, Finland, Greece, Hungary, Iceland, Italy, Japan, Latvia, Lithuania, Portugal, the Slovak Republic, Slovenia, Spain and Switzerland.

Australia (for all years) and New Zealand (from 2004 onwards) have provided values based on the 2006 ANZSIC industry classification, divisions B to N, which substantially overlaps with the ISIC Rev.4, sectors B to N. For New Zealand, the years prior to 2004 are based on sectors C-K in ANZSIC. Türkiye has provided values based on the NACE Rev.2 classification sectors B-N from 2007 onwards. Values for the years prior to 2007 are based on the average production worker wage (ISIC rev.3.1, sector D). The average wage values are not based on the sectors B-N in the ISIC Rev. 4 Industry Classification for Costa Rica (all years), the Netherlands (from 2012 onwards) or Mexico (all years).

## Special feature: Decomposition of personal income taxes

### Introduction

Personal income tax (PIT) is a significant part of the tax wedge analysed in Chapter 1 of this Report and a key source of revenues, accounting for 23.6% of total tax revenues on average across the OECD in 2022 (OECD, 2024<sup>[1]</sup>). At the same time, PIT systems are a channel for income redistribution and contain mechanisms to support households, mitigate possible disincentives to work and encourage specific behaviours, such as saving. While most studies of PIT's impact on progressivity and post-tax incomes have focused on marginal tax rates, this Special Feature uses the *Taxing Wages* models to show how tax allowances and credits interact with the tax schedule in OECD countries to affect the average tax rates of different household types and influence the progressivity of labour taxation.

The Special Feature demonstrates that tax allowances and credits (collectively known as tax reliefs) are key elements in determining the tax rates of different household types and amount to a significant share of households' final post-tax net income in OECD countries. It also shows that they are a channel by which OECD countries reduce the tax liability of specific household types, in particular families with children, and that tax credits tend to contribute more to the progressivity of PIT systems than tax allowances.

It should be noted that not all tax reliefs implemented by OECD countries meet the criteria for inclusion in the *Taxing Wages* models; only those that are universally available to taxpayers with certain characteristics and are not conditional on their expenditures are included in the calculations shown in this chapter. Further detail on the tax reliefs that exist in each country and whether they are included in the *Taxing Wages* models is provided in the country chapters found in Part II of this Report.

The results for France for 2024 should be interpreted with caution because the indexation of the tax schedule and income tax parameters to inflation (of 1.8%) could not be incorporated into the *Taxing Wages* models for this Report. This omission, which was due to the late adoption of the 2025 budget bill, results in higher estimated tax rates in 2024 than those that were effectively in force.

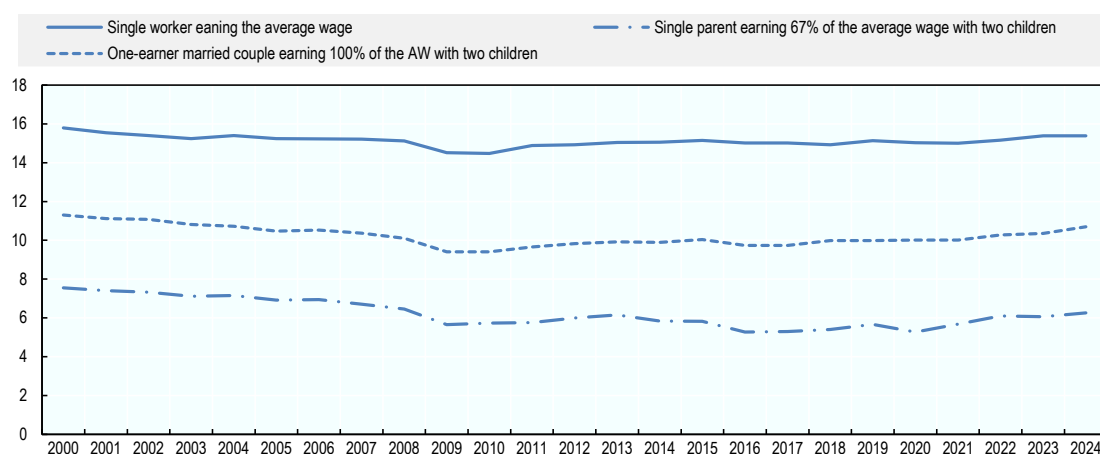

The Special Feature is structured as follows. Section 1 explains how tax reliefs contribute to the variation in the PIT rates of different household types shown in this Report. Section 2 examines the impact of tax credits on selected households' tax liability while Section 3 analyses the impact of tax allowances on their taxable income. Section 4 investigates the combined impact of credits and allowances on households' post-tax net income, while Section 5 analyses how these policies jointly affect the structural progressivity of PIT systems in OECD countries. Section 6 concludes.

## Understanding the *Taxing Wages* PIT indicator

The average PIT rate is a standard *Taxing Wages* indicator. It shows the share of gross earnings a household pays in PIT, taking into account any tax reliefs to which they are eligible (provided that the reliefs meet the criteria for inclusion within the *Taxing Wages* models). To set the scene for the analysis in this chapter, this section explains how variation in PIT rates across household types partly reflects the design of tax reliefs, as well as defining the chapter's key concepts, scope and methodology.

StatLink  <https://stat.link/eqxyos>

The chapter focuses on three household types: a single worker earning the average wage, a single parent with two children earning 67% of the average wage (hereafter, 'low-earning') and a one-earner married couple with two children where the principal earns the average wage. The single worker is the household type least impacted by tax reliefs across OECD countries, as workers without children mostly benefit from basic or earnings-related reliefs while the two other households are eligible for a broader range of policies, including measures to reduce rates for families with children.

Household types with higher earnings (whether single, married or containing children) also benefit from tax reliefs across OECD countries. However, the impact of tax reliefs on the indicators shown in this chapter for these higher-earning households follows similar dynamics to those shown for the three households specified above (albeit with differences in the exact impact reflecting the higher reference earnings). For reasons of space, the results for higher-earning household types are only included in the final section of this chapter, which focuses on the impact of tax reliefs on the progressivity of PIT systems at earnings between 67% and 300% of the average wage.

PIT rates differ significantly between these household types examined in this chapter (Figure 2.1). On average across the OECD, the PIT rate was highest for a single worker earning the average wage, at 15.4% of gross earnings in 2024. This was 4.7 percentage points (p.p.) higher than for the one-earner married couple with two children (10.7%), while the PIT rate for the low-earning single parent was 6.3%.

These different rates reflect variation in how taxable income and tax liabilities are calculated for different household types in *Taxing Wages*. While part of this variation results from differences in total earnings, it is also determined by tax reliefs that might reduce households' taxable income or their gross tax liability. Such policies tend to vary between household types according to their income level, marital status and the presence (or otherwise) of children. While many of these measures are well established, some may be timebound, such as those that OECD countries introduced during the COVID-19 pandemic or in response to subsequent increases in living costs.<sup>1</sup>

In *Taxing Wages* and for the purposes of this analysis, tax reliefs are limited to those that are automatically available to all taxpayers who satisfy the eligibility conditions. The *Taxing Wages* models do not include non-standard tax reliefs related to household expenditures such as spending on education or healthcare. While this simplification excludes many reliefs in place across OECD countries,<sup>2</sup> it allows for comparable results without making assumptions about households' consumption patterns.

This chapter focuses on two types of tax relief: allowances and credits. Tax allowances are defined as the amounts deducted from gross earnings to obtain the taxable income, while tax credits are deductions applied to a household's gross tax liability. Depending on the rules in place, these measures may be universal or means-tested, and they may consist of flat amounts linked to household composition or they may taper above a certain level of earnings.

Zero-rate tax brackets or reduced rates for specific household types are included in the *Taxing Wages* models but do not fall within the definition of tax reliefs as they are considered to be part of a tax schedule's structure. Box 2.1 explains the focus of this analysis and provides additional detail on the methodology for obtaining the results discussed in the chapter.

### Box 2.1. Decomposing the PIT: scope, methodology and definitions

OECD countries adopt a variety of policies to reduce the effective PIT rate levied on households. These policies might be universal or targeted, and they may affect different components of the PIT: taxable income, the tax schedule or the tax liability. This Box provides an overview of these policies and explains the decision to focus on allowances and credits.

#### Policy tools to reduce the PIT rate on labour income

The main policies implemented by OECD countries to reduce the final PIT liability are as follows:

- Allowance: amount deducted from the earnings to derive the taxable income
- Exemption: amount excluded from the definition of the taxable income
- Credit: amount deducted from the tax liability
- Rate relief: a reduced tax rate applied to a class of taxpayer
- Tax deferral: a delay in paying tax

Among these, tax deferrals are explicitly out of scope with respect to the *Taxing Wages*' methodology, as no assumption is made concerning when the tax liability is paid.

This chapter focuses on allowances and credits, and it includes exemptions within the definition of tax allowances. An example of the latter are deductions for social security contributions, which are included within total tax allowances since they are deducted from a household's gross earnings and thus affect its taxable income. The analysis in this chapter only considers allowances and credits received by households with earnings at the levels stipulated in the text.

The scope of allowances and credits examined here is broader than the concept of tax expenditure defined by OECD (2010<sup>[3]</sup>), which does not cover basic allowances and credits that are universally available to all taxpayers.

Rate reliefs, such as zero-rate tax brackets or reduced rates for specific household types, are included in the *Taxing Wages* models of various countries and may achieve similar objectives to credits and allowances. Although their impact on households' tax liability is reflected in the indicators shown in this chapter, rate reliefs are considered to be components of a country's tax schedule as they determine the statutory tax rate and are therefore not specifically analysed here.

The exclusion of zero-rate tax brackets from the analysis in this chapter should be borne in mind when considering the results for Australia, Austria, Chile, Colombia, Costa Rica, France, Luxembourg, Norway, Sweden and Switzerland, whose tax schedules include zero-rate tax brackets at low-earnings levels. The results for Ireland, Luxembourg, Switzerland and the United States should also be treated with caution as each has different tax schedules depending on the composition of the household. Torres, Mellbye and Brys (2012<sup>[4]</sup>) provide a detailed account of the similarities and differences between basic tax allowances and zero rate tax brackets.

### **Tax reliefs in *Taxing Wages***

The standard *Taxing Wages* methodology decomposes the final liability for central government taxes between the gross liability and tax credits. Tax credits are further disaggregated between basic credits, married head-of-family credits, child credits and other credits for those deductions that do not fall into the previously mentioned categories.

In this chapter, two additional categories have been added to the disaggregation of tax credits: earned income tax credits and unused wastable tax credits to show the portion of the wastable credits that the household could not utilise. The category for earned income tax credits consists of measures specifically described by OECD countries as "earned income credits"; these would otherwise be included within basic tax credits (please see Part II of this Report).

While the standard *Taxing Wages* models show the sub-central tax liability net of tax credits available at the state or local level, this chapter disaggregates the final sub-central tax liability between the sub-central gross tax liability and sub-central tax credits. This approach provides more detailed results for the decomposition of total tax credits.

Concerning tax allowances, this analysis adopts the standard *Taxing Wages* classification between basic tax allowance, married or head-of-family allowance, dependent children allowance, deduction for social security contributions and income taxes, work-related expenses allowance, and 'other standard allowances' not included in the other categories.

All deviations from the standard *Taxing Wages* calculations that have been introduced to allow for the analysis carried out in this chapter are listed in Annex Table 2.A.1.

Before proceeding with the analysis, it is important to acknowledge that the average tax rates on labour shown in the *Taxing Wages* models are also affected by the social security contributions (SSCs) payable by different household types, while households' overall liability may be reduced by any cash benefits to which they are eligible. Although SSCs and cash benefits are beyond the scope of this Special Feature, their existence and design are usually intrinsically linked with the design of the PIT system, and they will have an impact on the indicators for post-tax net income and progressivity shown later in the chapter.

Moreover, the chapter does not analyse the effectiveness of tax reliefs in achieving the specific objectives that may influence their design, such as promoting employment or alleviating poverty among low-income earners or households with children. Overall, the chapter should not be construed as providing guidance as to an optimal labour taxation system<sup>3</sup> but rather as an examination of specific components within such a system that have traditionally received less attention but may nonetheless have a significant impact on the tax rates of different household types.

For example, the Special Feature on taxation of second earners in *Taxing Wages 2024* demonstrated that household-level tax reliefs affect the incentives of second earners to take up employment, even in countries that primarily tax income on an individual basis (OECD, 2024<sup>[5]</sup>). Moreover, the existence (and importance) of the various tax reliefs examined in this chapter underscores the importance of indexing all components of a PIT system to inflation in order to avoid fiscal drag (OECD, 2023<sup>[6]</sup>).

### ***A graphical decomposition of the PIT***

To demonstrate the decomposition of effective PIT rates for different households, Figure 2.2 shows how the gross tax liability (including both central and sub-central taxes) is partially offset by tax credits in many OECD countries. The overall PIT rate is the sum of the central and sub-central tax liabilities<sup>4</sup> (the dark and light blue bars above the x axis) reduced by the respective tax credits (the dark and light grey bars below the x axis). The black diamond shows the resultant average PIT rate.

As shown in Panel A, the average PIT rate across OECD countries for a single worker earning the average wage was 15.4% of gross earnings in 2024. The rate was highest in Denmark (35.7%) and lowest in Chile, Colombia and Costa Rica (0.0%). In most OECD countries, the central government tax liability was the largest component of this indicator, with the exceptions of Sweden and Switzerland, where local taxes were more significant. In 19 countries, tax credits reduced this household type's gross tax liabilities, leading to a lower tax rate. This reduction was most notable in Sweden.

Panels B and C show that the average PIT rate was much lower for households with children in 2024. The OECD average PIT rate for a low-earning single parent with two children was 5.5% of gross earnings, while it was 10.4% for a one-earner married couple with two children. The impact of tax reliefs, which are visible both directly and indirectly in the Figure, in reducing these households' PIT rate is compounded by the lower earnings level for the single parent (Panel B) and by the existence in certain countries of specific tax schedules for these household types (Panels B and C).

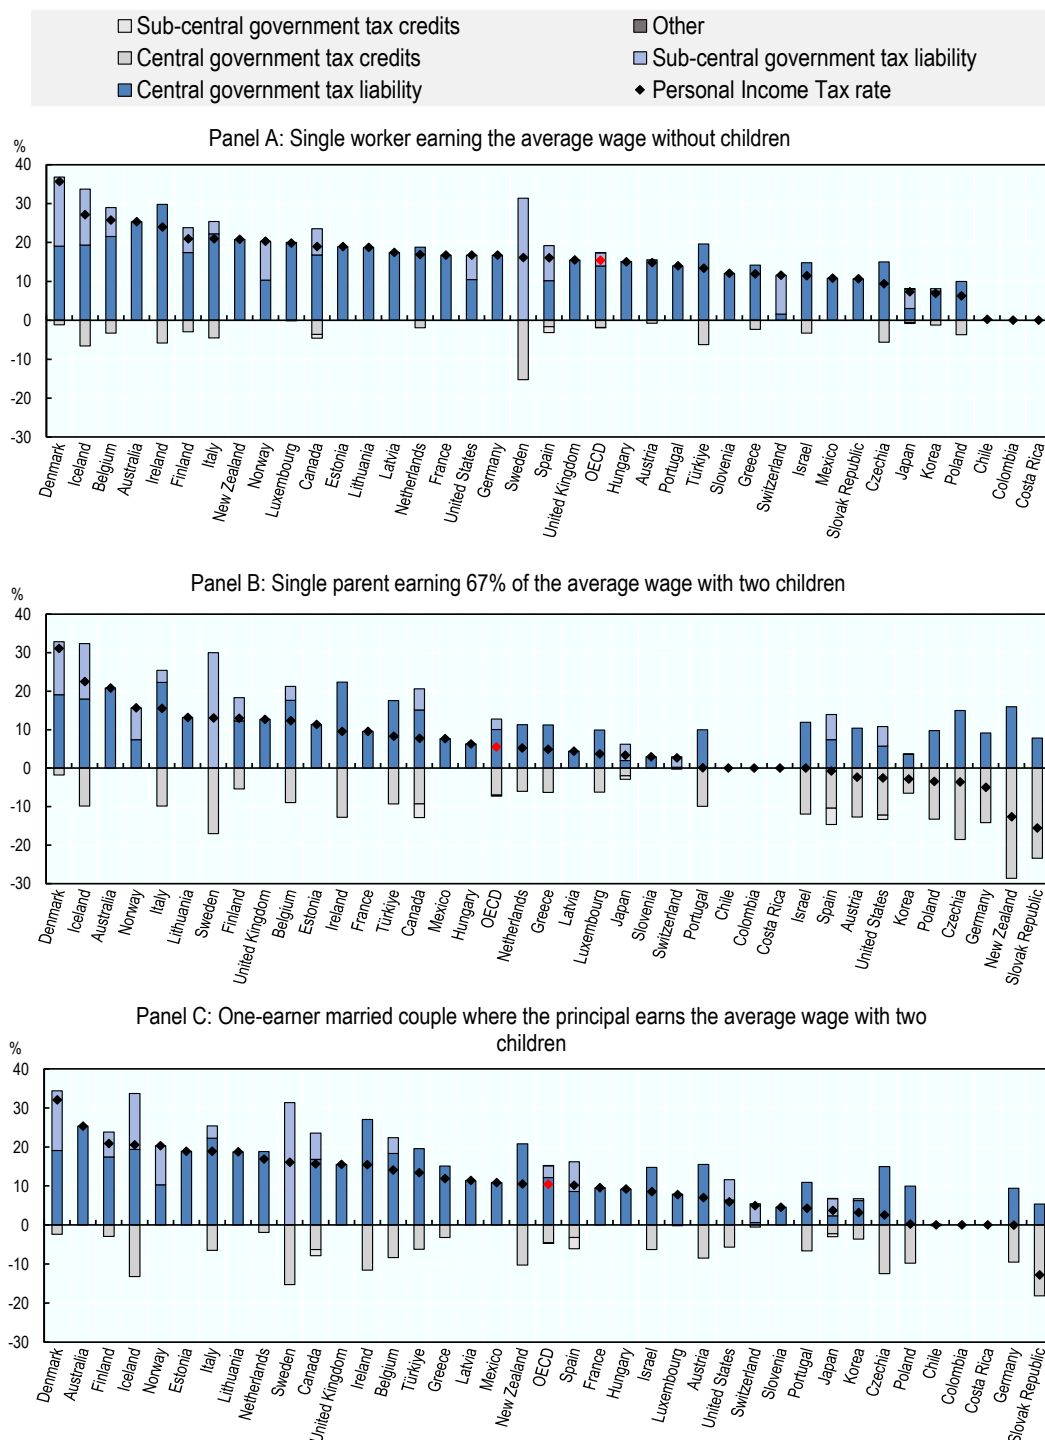

Figure 2.2 *directly* shows that the two household types with children were eligible for additional or more generous tax credits than single earners without children, which reduced the overall average tax rate. These credits were present in more OECD countries for these two household types than for a single earner without children shown in Panel A (25 countries in Panel B; 26 countries in Panel C). In some countries, such as the Slovak Republic, the PIT rate was negative because the value of tax credits exceeded the household's tax liability and could be refunded as if they were a transfer.<sup>5</sup>

Meanwhile, tax allowances are *indirectly* reflected in the Figure due to their impact on the gross tax liability. A comparison of Panels A and C partially demonstrates the effect of tax allowances: the gross tax liability for households with children is lower in some countries even if, at 100% of the average wage, gross earnings are the same because these households receive more generous tax allowances.

The following sections provide detailed information on the composition and size of tax credits and allowances in OECD countries respectively. Section 4 combines tax allowances and tax credits to show their combined and simultaneous impact on households' post-tax net income while Section 5 looks at their effect on the progressivity of PIT systems.

## Decomposing PIT credits

This section analyses PIT credits across the OECD countries that implement these policies. As each country adopts specific naming conventions for tax credits, categorising the various policies included under this umbrella can be challenging. In line with the *Taxing Wages* methodology, this chapter divides central government tax credits between basic tax credits, married or head of family tax credits, child tax credits, earned income tax credits, other tax credits (the latter category contains credits that fall outside the previously mentioned categories, such as tax credits linked to SSCs), and unused wastable tax credits, which include the portion of the wastable tax credits that the household did not use as the value of these credits exceeded the total tax liability.

Tax credits applicable to sub-central taxes are shown as a separate category although they cannot be disaggregated due to a lack of information. Credits on sub-central taxes are marginal across all three household types, with results showing only for Canada, Japan, Spain and the United States.

Figure 2.3 shows the breakdown of the total tax credit received by the three household types between the abovementioned categories for OECD countries that implemented these policies. In the 19 countries where tax credits existed for single workers without children in 2024, these households mostly benefitted from basic tax credits as they were not eligible for other types of credits (Panel A), with an average overall reduction in tax liability equivalent to 1.9% of their gross earnings.<sup>6</sup> For this household type, wastable credits were fully utilised as they tend to be low relative to gross earnings.

Meanwhile, single parents earning 67% of the average wage and one-earner couples earning the average wage (Panels B and C, respectively) were eligible for credits linked to the presence of children or a dependent spouse; for single parents, these reduced the tax liability by 7.3% of gross earnings on average while for single-earner married couples the reduction was 4.7% on average.

For both household types, child-related tax credits were larger than basic credits as a share of gross earnings (respectively 3.4% and 1.8% in Panel B, and 2.0% and 1.4% in Panel C), while credits linked to being head of a household only amounted to 0.8% for single parents and 0.4% for the one-earner married couple.

The greater relevance of tax credits for the low-earning single parent is due both to the provision of additional or more generous credits for this household type in some countries and to the lower level of reference earnings. The lower level of earnings means that the value of the credit represents a larger proportion of a household's gross earnings and that there is less (or no) tapering of the credits (in cases where tapering exists).

Earned income tax credits appear to be more relevant for lower-earning households, amounting to 0.5% of gross earnings in Panels A and C and 1.0% of gross earnings in Panel B. Sweden had the largest earned income tax credit relative to gross earnings for a single worker and one-earner married couple with two children, while this credit was largest for the low-earning single parent with two children in Italy in 2024.

Meanwhile, in Panels B and C, a few countries display unused wastable tax credits. For a low-earning single parent (Panel B), unused credits are present in Chile, Costa Rica, Israel, Japan, Poland and Switzerland; for a one-earner married couple (Panel C), they are present in Chile and Costa Rica, where these household types pay no income taxes.

### Figure 2.3. Decomposition of tax credits for different household types, 2024

Percentage of gross earnings

Note: Only countries that implement tax credits eligible for inclusion in the *Taxing Wages* models are shown. The only tax credit available to workers in Italy in 2024 was the earned income tax credit because the child tax credit was integrated within the universal cash transfers for children in 2022.

## Decomposing PIT allowances

PIT allowances reduce households' gross tax liability. As such, they have already been taken into account in Figure 2.3, as the gross tax liability in each country is computed by applying the tax schedule to taxable income, which in turn is determined by deducting tax allowances from gross earnings. This section disaggregates PIT allowances into basic tax allowances, married or head-of-family tax allowances, dependent children tax allowances, work-related tax allowances, deductions for SSCs and income taxes, and other standard tax allowances (for the amounts that do not follow within the aforementioned categories).

Figure 2.4 displays the decomposition of tax allowances in OECD countries for the three household types analysed previously. Unlike in the case of tax credits, the *Taxing Wages* models for almost all OECD countries contain tax allowances for all three household types. Unlike Figure 2.3, this decomposition focuses only on the allowances for central government taxes because the tax base across countries with sub-central taxes is either the same as for central government taxation or is computed on the basis of the central government tax liability.

As discussed in Box 2.1, some countries have additional policies, such as zero-rate tax brackets or specific tax schedules, that achieve similar objectives to those obtained by allowances. Nevertheless, in this analysis, said policies are considered to be components of a country's tax schedule as they determine the statutory tax rate. They are therefore not considered in this section of the analysis, which only focuses on those reliefs categorised as allowances within the framework of the *Taxing Wages* models. Additional details on country-specific reliefs are provided in the country chapters in Part II of this Report.

On average across the OECD, total tax allowances amounted to 15.9% of taxable income for the single worker earning the average wage in 2024 (Panel A). In the same year, the corresponding indicator was 27.7% for the low-earning single parent and 21.7% for the one-earner married couple with two children (Panels B and C respectively). Among the household types shown, tax allowances are especially significant for single parents, amounting to more than 80% of gross earnings in Slovenia.

OECD countries display great variation in their use of this form of tax relief. The only countries without tax allowances for all three household types analysed in this chapter are Australia, Czechia, Ireland, Israel and New Zealand. Australia implements a zero-rate tax bracket whereby the first AUD 18 200 earned by any taxpayer is not subject to income taxes.<sup>7</sup> Meanwhile, Czechia, Ireland, Israel and New Zealand provide tax credits that are also available to a single worker without children. In Hungary, tax allowances are linked to the presence of children so a single worker without children is not eligible.

On average, basic allowances and deductions for SSCs made up the majority of deductions across the three household types. Of all the countries with some form of tax allowance in place in 2024, only 11 did not include deductions for SSCs: Colombia, Costa Rica, Hungary, Lithuania, Mexico, the Netherlands, Norway, Portugal, Sweden, the United Kingdom and the United States. Meanwhile, allowances for children (for the single parent and the one-earner married couple) were particularly important in Colombia, Hungary, Latvia, Slovenia and Switzerland.

The countries with the largest shares of "other standard tax allowances" were Chile, Colombia, Costa Rica, Denmark, Korea and the Netherlands. In Chile, Colombia and the Netherlands, this category refers to the allowance for non-tax compulsory payments (NTCPs).<sup>8</sup> In Costa Rica, it refers to the bonus allowance equal to 30 days of salary. In Denmark and Korea, the "other tax allowance" refers to means-tested allowances linked to earnings from work.

**Figure 2.4. Decomposition of tax allowances by household type, 2024**

Percentage of gross earnings

## Combining the impact of credits and allowances on post-tax net income

This section compares the contribution of tax allowances and credits to households' post-tax net income (hereafter shortened to 'net income'), while the following section does the same with regard to their impact on progressivity. Comparing tax allowances with tax credits is not straightforward: while credits are directly deducted from a household's tax liability, allowances determine its taxable income, which in turn interacts with the tax schedule to determine the gross tax liability.

In other words, allowances affect the "last taxes" paid on taxable income while the size of a credit is always the same regardless of taxable income (in the absence of means testing).<sup>9</sup> A comparison of the net amounts 'received' by households through allowances and credits would be biased by the fact that each currency unit of allowance deducted from the tax base is weighted by the marginal tax rate applied. The importance of tax allowances would thus be overestimated.

To overcome this challenge, the following two sections compute the relative impact of allowances and credits on the indicators of interest by comparing two scenarios: a "status quo", whereby both allowances and credits are considered in the calculations, and a "counterfactual" scenario, whereby the taxpayer is assumed to receive no tax reliefs and their taxable income is thus the same as their gross earnings and their gross tax liability is not reduced by any credits.

This approach allows for a precise comparison of the effects of tax allowances and tax credits by focusing on the "post-tax impact" of both policies on the net income of the households analysed. The impact of tax credits can be identified directly through the amount that is deducted from the tax liability in the "status quo" scenario. For tax allowances, the effect is determined by simply subtracting the effect of the tax credits on the net income from the total effect of tax reliefs computed in the previous step.

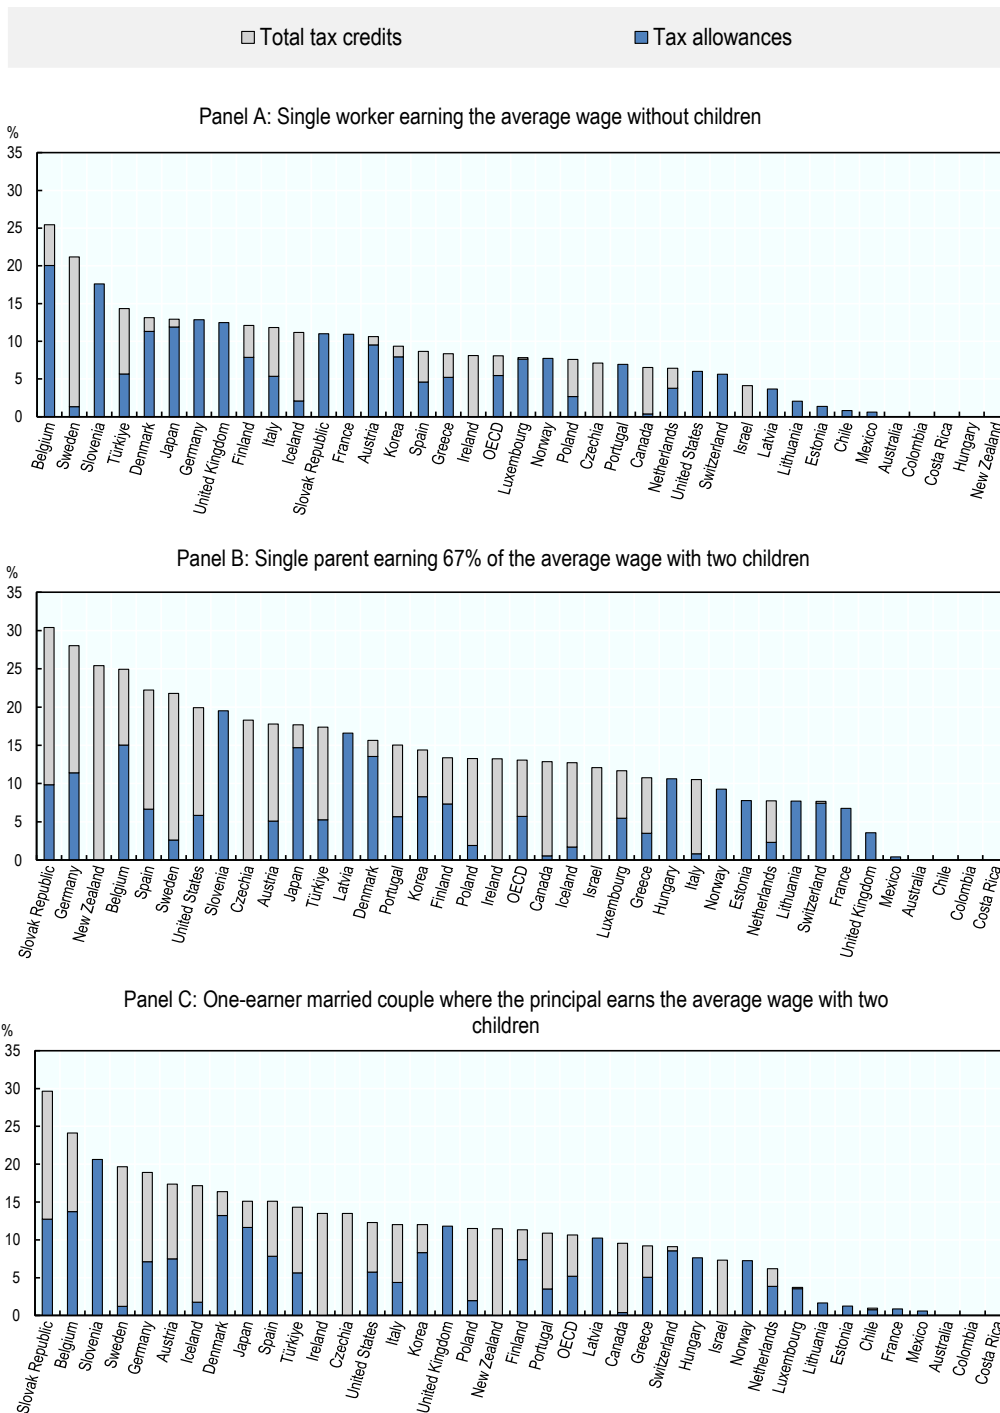

Figure 2.5 shows tax allowances and tax credits as a share of net income for the same household types previously examined across all OECD countries, where net income is calculated as the difference between the gross earnings and the sum of the total tax liability and employee SSCs, net of the cash transfers received by the household.

Panel A shows that, for a single worker earning the average wage, tax allowances amounted to more than twice as much as tax credits as a share of net income on average across OECD countries in 2024 (5.4% versus 2.6%). As mentioned previously, tax allowances were also more common across OECD countries for this household type than tax credits, which only existed in 19 countries. Most countries display either a relatively large tax allowance or large tax credits as a share of net income for this household type, except those countries that provide neither.

For the low-earning single parent with two children (Panel B), both tax reliefs were much higher than shown in Panel A, with tax credits contributing net income more than tax allowances on average (7.4% versus 5.7% respectively) in 2024. This household type is shown to benefit from particularly generous child-related credits, which account for a larger share of their net income than for the other household types as they earn less. The inverse relationship between the two reliefs is still visible in some countries, although there are more countries that display similar shares for both, such as Belgium, Finland, Germany, Korea, Luxembourg, Portugal and the Slovak Republic.

Figure 2.5. Effect of tax reliefs on net incomes, 2024

Percentage of net income

Note: The total share of the net income attributable to the tax reliefs has been computed by comparing the standard *Taxing Wages* results with a counterfactual scenario without any tax reliefs. The proportion attributed to tax credits was computed by dividing the amount of the tax credits by the net income, while the proportion for the tax allowances was computed by deducting the proportion for the credits from the total share of the net income attributable to tax reliefs.

Source: Country submissions, (OECD, 2024<sup>[2]</sup>) Economic Outlook Volume 2024 Issue 2.

Panel C for the one-earner married couple with two children shows a similar share for tax allowances to that of the single worker without children (5.2%), while tax credits are almost as large as allowances, at 5.4% of net income. Again, the more generous credits can be explained by the presence of children and of a dependent spouse in the household. As for the other households, the inverse relationship between allowances and credits is still visible, while the aforementioned exceptions hold true.

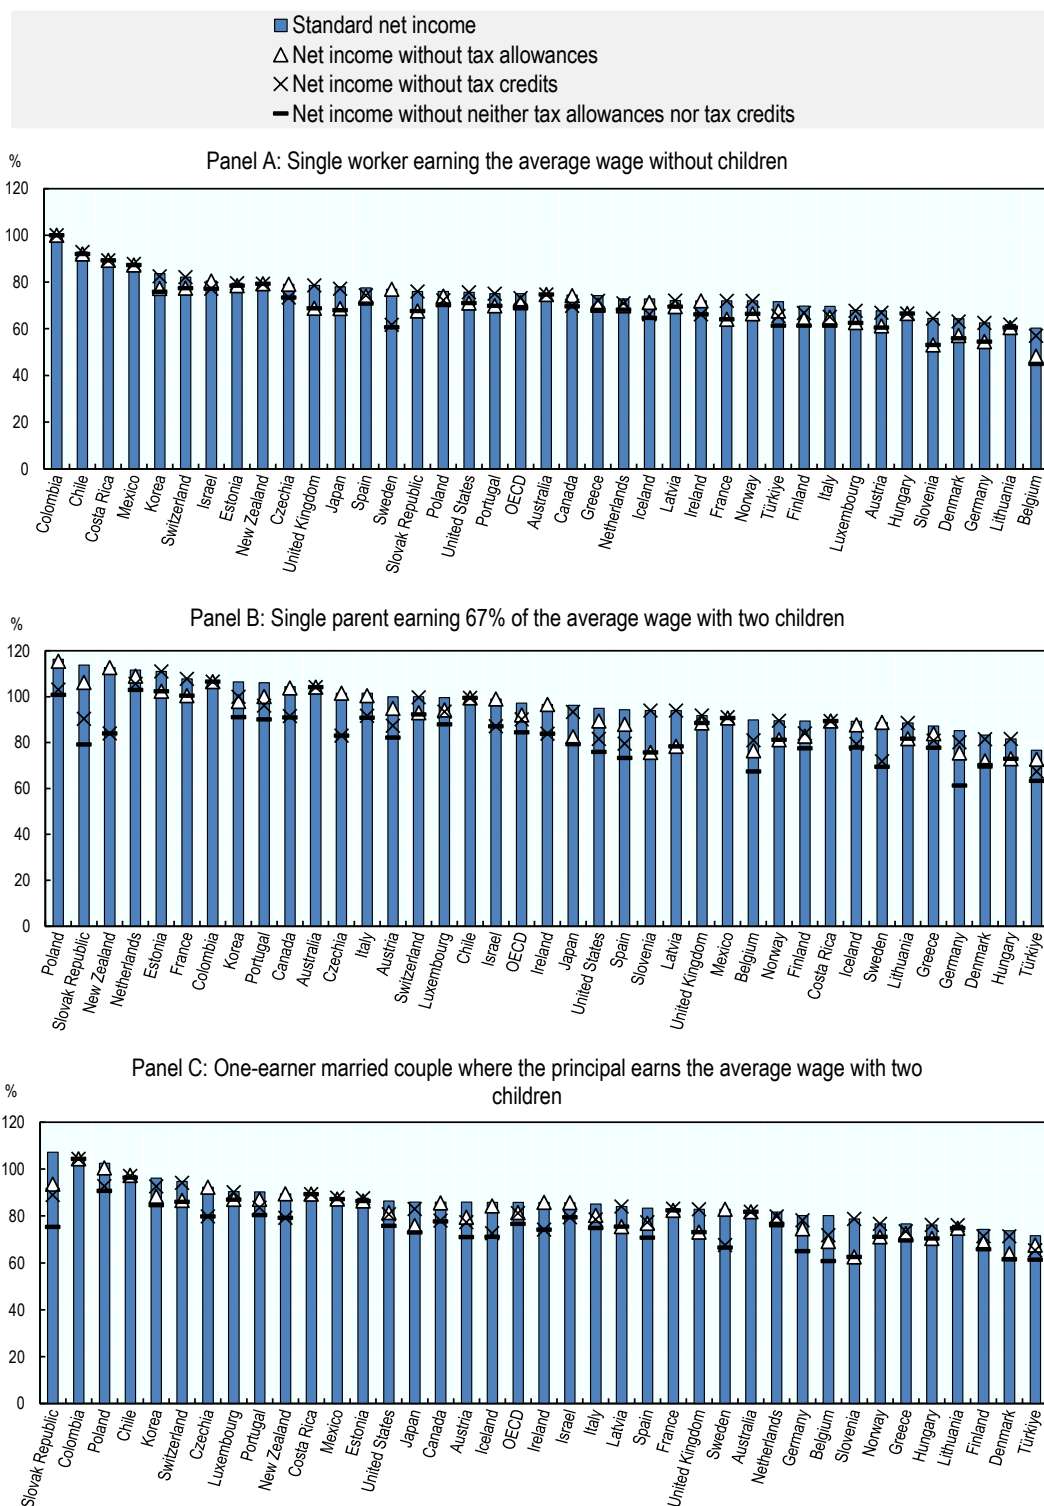

Figure 2.6 examines the same variables as Figure 2.5 (also with reference to 2024) but through a different lens. It displays the net income of the same three household types in all OECD countries as a share of gross earnings in various scenarios: the results as they appear in the *Taxing Wages* models (hereafter 'standard'); assuming that the households receive no allowances; assuming they receive no credits, and assuming they receive neither allowances nor credits.

While the shares of gross earnings retained as net income vary significantly across OECD countries, the presence of tax reliefs significantly affects households' residual after-tax income.

For single workers without children (Panel A), net income decreases from 75.0% to 69.2% of gross earnings when tax allowances and tax credits are excluded, with tax allowances responsible for a larger share of the decrease. The decreases are larger in Panels B and C, where households receive more generous tax reliefs: on average, the net income of a low-earning single parent drops from 97.2% to 84.5% of gross earnings, while it decreases from 85.8% to 76.7% for a one-earner married couple with two children.

As the net incomes shown here include cash transfers for households with children, they can be larger than gross earnings (i.e., above 100% in the figures) in countries with very low taxation at these earnings levels even in the absence of tax reliefs (for example, in Australia, Colombia and New Zealand).

Figure 2.6. Net income as a share of gross earnings with and without tax reliefs, 2024

Note: The standard net income is the net income inclusive of tax allowances and credits.

## The impact of tax reliefs on the structural progressivity of PIT systems

To conclude the analysis in this chapter, this section examines the extent to which tax reliefs affect the progressivity of PIT systems across the OECD. In the absence of data on income distributions in OECD countries, this analysis considers the progressivity implied by the design of the PIT system (structural progressivity) rather than the actual impact of PIT on the income distribution as might be measured, for example, by its effect on the Gini coefficient.<sup>10</sup> The progressivity indicator for the PIT rate follows the methodology adopted in the *Taxing Wages 2013* report (OECD, 2013<sup>[7]</sup>).

Figure 2.7 uses this *Taxing Wages* progressivity indicator to display how excluding either or both tax reliefs affects the progressivity of PIT systems in OECD countries. The progressivity indicator shows the change in the PIT rate as gross earnings increase as a percentage of the average wage over a given income range, and it is computed as follows:

$$\text{Progressivity of PIT} = \frac{(PIT_{300\% \text{ AW}} - PIT_{67\% \text{ AW}})}{(300 - 67)}$$

The indicator should be interpreted as the increase in the PIT rate for an increase in earnings. More precisely: between the earnings levels considered, for each increase of 1 percentage point of the average wage in gross earnings, there is an x% increase in the PIT rate. A higher value means that the PIT rate increases more steeply between the bottom (67% of the average wage) and the top (300% of the average wage) earnings levels considered, implying greater progressivity (OECD, 2013<sup>[7]</sup>).

Figure 2.7 shows that excluding tax reliefs leads to a reduction in the structural progressivity of PIT among almost all OECD countries for all three household types considered in this chapter. Allowances are particularly important in countries with a flat tax system, such as Estonia and Hungary, where the presence of a means-tested allowance introduces progressivity in the *Taxing Wages* models.<sup>11</sup> Across OECD countries, the reduction in progressivity is larger for households with dependents, in particular for the low-earning single parent.

More precisely, when both allowances and credits are excluded, progressivity decreases from 0.07 to 0.05 for the single worker (Panel A), from 0.08 to 0.05 for the single parent with two children (Panel B) and from 0.09 to 0.05 for the one-earner married couple with two children, on average across OECD countries.

Excluding tax credits contributes to a larger average reduction in the progressivity of PIT rate than excluding tax allowances for all three household types. This suggests that, on average across OECD countries, tax credits tend to be more progressive than tax allowances, which may sometimes even be regressive because they result in a higher tax deduction for higher-earning workers due to the progressivity of tax schedules.

This finding is reinforced by the fact that for Costa Rica, Chile, Colombia, France,<sup>12</sup> Greece, Iceland, Italy, Japan, the Netherlands, Poland, Switzerland and Türkiye, omitting allowances leads to an increase in the progressivity of PIT. In these countries, allowances tend to increase with earnings either because (i) they mostly consist of deductions for employee SSCs or, where present, NTCPs (in Chile, Colombia, France, Greece, Iceland, Italy, the Netherlands, Poland, Switzerland and Türkiye), or (ii) the main allowance is computed as an uncapped proportion of gross earnings (such as in Costa Rica, where it equals one month's salary; in France, where there is a work allowance equal to 10% of gross earnings; and in Japan, where there is an employment allowance linked to earnings).

Meanwhile, omitting tax allowances leads to lower progressivity in those countries where they are reduced progressively as earnings increase (such as Estonia or the United Kingdom). This is consistent with the economic literature highlighting the potential regressive impact of certain types of allowance (Avram, 2014<sup>[8]</sup>; Wagstaff and Doorslaer, 2001<sup>[9]</sup>).

Figure 2.7. Contribution of tax allowances and tax credits to the progressivity of the PIT rate, 2024

Note: The progressivity indicator shows the change in the PIT rate as gross earnings increase as a percentage of the average wage over a given income range.

## Conclusion

PIT is a key source of revenues for OECD countries and features prominently in the tax wedge on labour for most household types analysed in *Taxing Wages*. Nonetheless, average PIT rates vary significantly across these household types, reflecting not only different marginal tax rates applied at different levels of earnings but also the tax reliefs to which these households may be eligible.

This Special Feature decomposes PIT rates to understand the nature and impact of these tax reliefs, with a specific focus on tax credits and allowances. While allowances are present in almost every OECD country, the prevalence of tax credits varies by household type; married households or households with children tend to be more likely to receive credits than single workers.

The chapter considers the impact of tax credits with reference to their impact on the tax liability. On average across the OECD in 2024, tax credits reduced the tax liability for a single worker earning the average wage by 1.9% of their gross earnings, while the associated reduction was 4.7% of gross earnings on average for one-earner married couples with two children earning the average wage, and 7.3% for a single parent earning 67% of the average wage.

Tax allowances, meanwhile, are analysed with reference to their impact on a household's gross income. The chapter shows that total tax allowances amounted to 15.9% of taxable income for the single worker earning the average wage in 2024, 21.7% for the one-earner married couple with two children and 27.7% for the low-earning single parent.

To enable a combined (and thus comparative) analysis of tax credits and allowances, this chapter introduces a new indicator showing the impact of tax reliefs on households' net income. This indicator shows the relative importance of credits and allowances between household types and across countries.

For a single worker earning the average wage, allowances amounted to a larger share of net income than credits in 2024, while the opposite was the case for the low-earning single parent. For the one-earner married couple, credits and allowances amounted to a similar amount of net income. In many countries and across household types, tax allowances tend to have a greater impact on net incomes where tax credits have a lesser (or no) impact, and vice versa.

The chapter extends this approach to examine the impact of tax credits and allowances on the structural progressivity of PIT systems in OECD countries. It finds that removing tax credits reduces structural progressivity by more than removing tax allowances, in particular for households with children. Indeed, in some countries, tax allowances reduce the progressivity of the PIT.

It is important to note that the analysis in this chapter does not include all the policies OECD countries implement to support households' net income. Nor does it include reliefs that are embedded in tax schedules, such as specific rates or zero-rate tax brackets.

Nonetheless, it is a unique starting point for deeper analysis on the use of tax reliefs, which could be complemented by an examination of how these have evolved over time and how their impact on tax rates compares with other components of a given labour taxation system, including SSCs and cash benefits. In addition, the results on structural progressivity could be set against income distributions in OECD countries to better understand the incidence and distributional impact of tax reliefs as part of broader studies on tax and inequality.

## Annex 2.A. Changes made to the standard *Taxing Wages* models for the purposes of this analysis

**Annex Table 2.A.1. List of changes made to the standard *Taxing Wages* models for the purposes of this analysis**

Country	Tax liability	Tax allowances	Tax credits
Belgium	No change	No change	In the standard <i>Taxing Wages</i> calculations, the final tax liability is obtained by weighting the gross tax liability by an “autonomy factor” necessary to compute regional taxes. In order to balance the final tax liability between the gross tax liability and the tax credits, for this analysis the gross tax liability itself is weighted by the “autonomy factor”.
Canada	No change	No change	An additional variable is added to the model to show the credits applied to sub-central taxes.
Chile	No change	No change	An additional variable is added to the model to show the unused wastable tax credits.
Costa Rica	No change	No change	An additional variable is added to the model to show the unused wastable tax credits.
Denmark	In the standard calculations, the final tax liability is the sum of the gross PIT liability and the Labour Market contribution, net of credits. For this analysis, the Labour Market contribution is added to the gross PIT liability. It is important to note that the tax base for the PIT includes tax allowances, while the Labour Market contribution is paid on gross earnings from work.	For this analysis, NTCP deductions for pension insurance are classified as SSC deductions.	No change
Finland	In the standard calculations, the final tax liability is the sum of the gross PIT liability and the broadcasting tax, net of credits. For this analysis, the broadcasting tax is added to the gross PIT liability. It is important to note that the tax base for the PIT includes all tax allowances, while the broadcasting tax is paid on the gross earnings from work net of the allowances for work-related expenditures that are above a certain threshold.	The earned income deduction is shown in the category of “other tax allowances” (in contrast to the standard calculations, where it is shown with “deductions for SSCs and income taxes”).	An additional variable is added to the model to show the earned income tax credit as a unique amount.
Germany	No change	In the standard calculations, the	No change

		household receives either the child-related allowance or the child-related credit: if the value of the tax credit is less than the relief calculated applying the tax allowances, the tax allowance is applied (otherwise the tax credit). To calculate the results for the scenario without tax credits, the standard calculations were edited to ensure that the child-related allowance is always available to households with children.	
Iceland	In the standard calculations, the final tax liability is the sum of the gross PIT liability and the broadcasting fee, net of credits. For this analysis, the broadcasting fee is added to the gross PIT liability. It is important to note that the tax base for the PIT is the taxable income net of the allowances available to the taxpayer, while the broadcasting fee is paid on gross earnings from work.	No change	No change
Ireland	In the standard calculations, the final tax liability is the sum of the gross PIT liability and the Universal Social Charge (USC), net of credits. For this analysis, the USC is added to the gross PIT liability. It is important to note that the tax base for the PIT is the taxable income net of the allowances available to the taxpayer, while the USC is paid on gross earnings from work.	No change	No change
Israel	No change	No change	The total tax credit amount is considered net of the unused wastable tax credits. Moreover, an additional variable is added to the model to show the earned income tax credit as a unique amount.
Italy	No change	No change	An additional variable is added to the model to show the earned income tax credit as a unique amount.
Japan	No change	No change	An additional variable is added to the model to allow to show the credits applied to sub-central taxes. Moreover, an additional variable is added to show the unused wastable tax credits.
Korea	No change	The deduction for sickness and unemployment insurance contributions is categorised in the amount for the “deductions for SSCs and income taxes” (in contrast to the standard calculations, where it is shown with “other tax allowances”).	An additional variable is added to the model to show the earned income tax credit as a unique amount.
Luxembourg	No change	No change	An additional variable is added to the model to show the earned income tax credit as a unique amount.
Netherlands	No change	No change	An additional variable is added to the model to show the earned income tax credit as a unique amount.
Norway	No change	The total tax allowance is disaggregated into categories for the basic tax allowances and the “married or head of family allowance”.	No change
New Zealand	No change	No change	In the standard calculations, the

			refundable tax credits are categorised as cash transfers to the household. For this analysis, they are categorised as tax credits and hence subtracted from the gross tax liability to determine the final PIT liability. Moreover, an additional variable is added to the model to show the earned income tax credit as a unique amount.
Poland	No change	No change	An additional variable is added to the model to show the unused wastable tax credits.
Slovenia	No change	In the standard calculations, the allowance for a dependent spouse is shown within a custom category specific to the model for Slovenia. For this analysis, this allowance is shown as part of the “married or head of family allowances” category.	No change
Spain	No change	No change	An additional variable is added to the model to allow to show the credits applied to sub-central taxes.
Sweden	No change	No change	In the standard calculations, the tax credits are shown as a total amount. For this analysis, the earned income tax credit is shown in the specific category for this type of credit, while the tax credit for SSCs is shown in the category for “other tax credits”.
Switzerland	No change	No change	An additional variable is added to the model to show the unused wastable tax credits.
Türkiye	In the standard calculations, the final tax liability is the sum of the gross PIT liability and the stamp tax, net of credits. For this analysis, the stamp tax is added to the gross PIT liability. It is important to note that the tax base for the PIT is the taxable income net of the allowances available to the taxpayer, while the stamp tax is paid on gross earnings from work above a certain threshold.	No change	No change
United States	No change	No change	An additional variable is added to the model to show the earned income tax credit as a unique amount.

Note: For more information on the policies in place in each country, please refer to the country chapters provided in Part II of this Report.

## Notes

<sup>1</sup> See the Special Features of the *Taxing Wages* reports for 2021 and 2022 for a detailed analysis of how OECD governments adapted labour tax policy in response to the COVID-19 pandemic (OECD, 2021<sup>[11]</sup>; OECD, 2022<sup>[12]</sup>), while the *Taxing Wages* report for 2023 includes information on measures introduced to support households as inflation rose to its highest level in over three decades in 2022 (OECD, 2023<sup>[6]</sup>).

<sup>2</sup> Non-standard tax reliefs feature in the tax systems of almost all OECD countries (Australia, Austria, Belgium, Canada, Chile, Colombia, Czechia, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Israel, Italy, Japan, Korea, Latvia, Lithuania, Luxembourg, Mexico, the Netherlands, Norway, Poland, Portugal, the Slovak Republic, Slovenia, Spain, Sweden, Switzerland, Türkiye, United Kingdom and the United States). In all these countries, the results shown in this chapter can be considered to provide an upper estimate of the average PIT rate, as resident households would be able to claim additional deductions that increase their post-tax net income. The PIT would be overestimated the most in those countries where most tax reliefs are non-standard, such as in Greece.

<sup>3</sup> Please see Kaplow (2024<sup>[10]</sup>) for a recent overview of the literature on optimal labour taxation.

<sup>4</sup> Sub-central tax liabilities include taxes levied at the state or regional level in federal or decentralised countries as well as taxes levied at the county or city level (as happens, for example, in Belgium and the United States). For comparability purposes, they are shown as part of this unique category for all OECD countries.

<sup>5</sup> The “tax relief for children” available to families in the Slovak Republic consists of a non-wastable tax credit of EUR 1 680 per child, capped at a certain share of the household’s total taxable income depending on the number of children.

<sup>6</sup> The large share of the “other tax credits” category observed in Panel A for Sweden and Ireland is due to deductions that do not fall under the definitions for the other categories. In Sweden, it consists of a credit linked to SSCs paid by the household. In Ireland, it consists of the employee credit, which is a flat amount available to all working individuals (and separate from the basic credit).

<sup>7</sup> In addition to the zero-rate tax bracket mentioned, low-earning workers in Australia can benefit from the Low Income Tax Offset (LITO). However, this tax credit is not reflected in the results shown in this chapter because a worker earning 67% of the average wage (AUD 69 542 in 2024) is above the maximum earnings threshold to be eligible for the LITO (AUD 66 667).

<sup>8</sup> While non-tax compulsory payments are not included within total SSC amounts shown in this Report, any deduction or credits linked to them are included since these are compulsory payments for all workers. For more details on this, please see the Methodology and Limitations section of the Report.

<sup>9</sup> The following example illustrates how the effect of allowances on the tax liability depends on gross earnings and the tax schedule. Consider a single worker earning NCU 1 000, who is faced with a 10% tax rate on earnings between NCU 0 and NCU 500, and a 20% tax rate on earnings above NCU 500. In the absence of any allowance, their tax liability would be NCU 150. Introducing an allowance of NCU 100 would reduce their taxable income to NCU 900 and the liability to NCU 130. Now consider a worker with gross earnings of NCU 500, whose liability of NCU 50 without any allowance drops to NCU 40 when the

allowance is introduced. The savings for the higher-earning individual are thus NCU 20, while they are NCU 10 for the lower-earning individual.

<sup>10</sup> The Gini coefficient is based on the comparison of cumulative proportions of the population against cumulative proportions of income they receive. It ranges between 0 in the case of perfect equality (that is, each share of the population gets the same share of income), and 1 in the case of "perfect inequality" (that is, all income goes to the individual with the highest income) (OECD, 2025<sup>[13]</sup>).

<sup>11</sup> This is also the case for Lithuania. Although Lithuania's tax schedule has two brackets, the upper bracket only applies to earnings above the maximum earnings level tested in Figure 2.7 and hence does not affect the progressivity indicator shown.

<sup>12</sup> France's tax schedule for 2024 has been adjusted for inflation in the 2025 budget bill. However, due to the late adoption of the 2025 budget bill, the indexation of the tax schedule and income tax parameters to inflation (of 1.8%) could not be incorporated into the *Taxing Wages* model for this Report. This results in higher estimated tax rates than those effectively in force.

# 3

## Effective tax rates on labour income in 2024

---

The effective tax rates on labour income in 2024 calculated for the eight model household types are presented in Tables 3.1 to 3.13 and Figures 3.1 to 3.7. The household types vary by marital status, number of children and economic status. For each household type, the chapter presents different indicators for the average rates (tax wedge, personal tax rate, net personal tax rate, personal income tax rate and employee social security contribution rate) and marginal rates (tax wedge and net personal tax rate). The results for two measures of tax progressivity are also considered: tax elasticity on gross earnings and labour costs.

---

This chapter shows the main *Taxing Wages* results for 2024 for all countries and household types, which are summarised in comparative tables and figures. The results for France should be interpreted with caution because the indexation of the tax schedule and income tax parameters to inflation (of 1.8%) could not be incorporated in the *Taxing Wages* models for this Report. This omission, due to the late adoption of the 2025 budget bill, results in higher estimated tax rates in 2024 than those that were effectively in force.

## Average tax rates

Table 3.1<sup>1</sup> and Figure 3.1 show the average tax wedge for 2024, which combines personal income tax, employee social security contributions (SSCs) and employer SSCs while also taking into account the cash benefits to which each household type was entitled. Total taxes due minus transfers received are expressed as a percentage of labour costs, defined as gross wage *plus* employer SSCs (including payroll taxes). In the case of a single worker earning the average wage (AW), the tax wedge ranged from zero (Colombia) and 7.2% (Chile) to 47.9% (Germany) and 52.6% (Belgium). For a one-earner married couple with two children, at the average wage level, the tax wedge was lowest in Colombia (-4.4%) and highest in Türkiye (39.0%) and France<sup>2</sup> (39.1%). As stated in Chapter 1, the tax wedge tends to be lower for a married couple with two children at this wage level than for a single individual without children due to receipt of cash benefits and/or more advantageous tax treatment. The tax wedge for a single parent with two children, earning 67% of the AW, was negative in New Zealand (-12.6%) and Colombia (-6.5%). A negative tax wedge occurs when the cash benefits received by families, plus any applicable non-wastable tax credits, exceed the sum of the total tax and SSCs that are due.

Table 3.2 and Figure 3.2 combine personal income tax and employee SSCs in 2024, expressed as a percentage of gross wage earnings (the corresponding measures for income tax and employee contributions separately are shown in Tables 3.4 and 3.5). For single workers at the average wage level without children, the highest average levels of tax plus SSCs were seen in Lithuania (38.2%) and Belgium (39.7%). The lowest average rates were in Colombia (0.0%), Chile (7.2%), Costa Rica (10.7%), Mexico (12.2%), Korea (16.3%), Switzerland (18.0%), Israel (19.6%), Estonia (20.5%) and New Zealand (20.8%).

Table 3.3 shows personal income tax and employee SSCs, reduced by the entitlement to cash benefits, for each household type in 2024. Figure 3.3 illustrates this for single individuals without children and one-earner married couples with two children, with both household types on average earnings. Comparing Table 3.2 and Table 3.3, the average tax rates for families with children (columns 4-7) are lower in Table 3.3 because most countries support families with children through cash benefits.

Comparing Table 3.2 and Table 3.3 for single parents earning 67% of the average wage shows that 32 countries provided cash benefits for this household in 2024. In Poland, New Zealand and France, cash benefits amounted to over 25% of gross earnings (30.6%, 28.6% and 28.6%, respectively). Thirty-two countries provided cash benefits for a one-earner married couple with two children earning the average wage, although these were less generous relative to income, ranging up to 20.5% in Poland. The lower level for the married couple may be attributable to three factors: single parents may be eligible for more generous treatment; benefits may be fixed in absolute amount; or benefits may be subject to means testing.

Table 3.4 shows personal income tax due as a percentage of gross wage earnings in 2024. For single persons without children earning the average wage (column 2), the income tax burden ranged from 0.0% (Colombia and Costa Rica) to 35.7% (Denmark). In most countries, at the average wage level, the income tax burden for one-earner married couples with two children was lower than that for single persons (compare columns 2 and 5). These differences are illustrated in Figure 3.4. In twelve countries, the income tax burden of a one-earner married couple with two children is less than half that faced by a single individual (Austria, Chile, Czechia, Germany, Korea, Luxembourg, Poland, Portugal, the Slovak Republic, Slovenia, Switzerland and the United States). There was no difference in a further thirteen countries: Australia, Colombia, Costa Rica, Estonia, Finland, Lithuania, Mexico, the Netherlands, New Zealand, Norway,

Sweden, Türkiye and the United Kingdom. In Colombia and Costa Rica, neither a single worker nor a one-earner married couple at the average wage paid personal income taxes.

In two OECD countries, the personal income tax rate for a married worker at the average wage with two children was negative in 2024: Germany (-0.1%) and Slovak Republic (-12.8%). This was due to the presence of non-wastable tax credits, whereby credits were paid in excess of the taxes due. Single parents with two children earning 67% of the average wage showed a negative tax burden in eight countries: Austria, Czechia, Germany, Korea, Poland, the Slovak Republic, Spain and the United States. In four other countries (Chile, Colombia, Costa Rica and Israel) this household type paid no income tax.

Comparison of columns 5 and 6 in Table 3.4 demonstrates that if the second spouse was employed at 67% of the average wage, the income tax burden of the household (now expressed as 167% of the average wage) would be slightly higher in 20 countries, the largest differences being in Germany (9.2 percentage points [p.p.]) and the Slovak Republic (11.4 p.p.). The income tax burden was lower for the two-earner household where the principal earns the average wage and the spouse earns 67% of the average wage in fourteen countries, the largest difference being in the Netherlands (4.7 p.p.), Israel (3.4 p.p.) and Finland (3.2 p.p.). There was no impact on the tax burden in Chile, Colombia or Costa Rica.

An important consideration in the design of an income tax is the degree of progressivity – the rate at which the income tax burden increases with income. A comparison of columns 1 to 3 in Table 3.4 provides an insight into the progressivity of income tax systems of countries. Comparing the income tax burden of single individuals at the average wage level with their counterpart at 167% of the average wage (columns 2 and 3), the lower-paid worker faced a lower tax burden in all countries except in Colombia and Hungary in 2024. In Colombia, neither the average single worker nor their counterpart at 167% of the average wage paid personal income tax. In Hungary, a flat tax rate was applied on labour income and all households without children paid the same percentage of income tax. Comparing single individuals at 67% of the average wage level with their counterparts at the average wage level (columns 1 and 2), the lower-paid worker also faced a lower tax burden across all countries except Colombia, Costa Rica and Hungary. The burden faced by single individuals at 67% of the average wage level represented less than 25% of the burden faced by their counterparts at 167% in two countries: Chile (0.0%) and Costa Rica (0.0%).

The addition of SSCs to the average tax rate reduces this progressivity as well as the proportional tax savings (i.e. tax savings of the low-income workers relative to higher-income workers). When comparing Table 3.2 with Table 3.4, the OECD personal average tax rate including SSCs for single individuals at 67% of the average wage level was only 31.8% lower than their counterparts at 167%, compared to the OECD average tax savings of 47.1% for personal income taxes alone in 2024. The OECD average tax savings observed for one-earner married couples with two children at the average wage level relative to the average single worker fell from 30.5% for the personal income tax to 18.7% for the personal average tax rate including SSCs. These lower figures reflect that there is little variation in SSC rates across household types, as shown in Table 3.5.

Table 3.5 shows employee SSCs as a percentage of gross wage earnings in 2024. For a single worker without children at the average wage (column 2), the contribution rate varied between zero (Australia, Colombia, Denmark and New Zealand) and 23.6% (Slovenia). Australia, Denmark and New Zealand did not levy any employee SSCs paid to general government. In Colombia, most of the SSCs are paid to funds outside the general government and are considered to be non-tax compulsory payments; they are therefore not counted as SSCs in the *Taxing Wages* calculations. There were three other countries with very low rates: Iceland (0.1%), Mexico (1.4%) and Estonia (1.6%).

SSCs are usually levied on all earnings without a minimum earnings threshold. Although a number of OECD member countries apply a ceiling to SSCs, this usually applies to wage levels above 167% of the average wage. As a result, the contribution on earnings tends to be flat between 67% and 167% of average wage for most countries. A constant proportional burden for employee SSCs for the eight household types was observed in Lithuania (19.5%), Hungary (18.5%), Poland (17.8%), Türkiye (15.0%), Greece (13.9%),

the Slovak Republic (13.4%), Czechia (11.6%), Portugal (11.0%), Costa Rica (10.7%), Latvia (10.5%), Norway (7.8%), the United States (7.7%), Chile (7.0%), Spain (6.5%), Ireland (4.0%) and Estonia (1.6%). In addition, at the average wage level, Belgium and Germany imposed different levels of SSCs on employees according to their family status (Figure 3.5).

## Marginal tax rates

Table 3.6 and Figure 3.6 show the percentage of the marginal increase in labour costs that was deducted through the combined effect of increasing personal income tax, employee and employer SSCs (including payroll taxes) and decreasing cash transfers in 2024. It is assumed that the gross earnings of the principal earner rise by 1 currency unit. This is the marginal tax wedge. In most cases, the marginal tax wedge absorbed 25% to 55% of an increase in labour costs for a single individual without children earning the average wage in 2024. However, in six countries, these individuals faced marginal wedges above 55%: Finland (56.2%), Luxembourg (57.3%), France<sup>3</sup> (58.2%), Austria (58.3%), Italy (64.1%) and Belgium (65.0%). By contrast, Chile (10.2%) had the lowest marginal tax wedge. For Colombia, no income tax was paid at the average wage level in 2024 while SSCs are considered as non-tax compulsory payments (NTCPs) and thus not included in the *Taxing Wages* calculations.<sup>4</sup>

In twenty-seven OECD member countries, the **marginal tax wedge** for a one-earner married couple at average earnings with two children was either the same as that for a single worker at average wage with no children or within 5 p.p. thereof. The marginal tax wedge was more than 5 p.p. points lower for one-earner married couples in seven countries: France<sup>5</sup> (16.2 p.p.), Luxembourg (14.5 p.p.), the United States (9.3 p.p.), Germany (7.2 p.p.), Portugal (6.9 p.p.), Slovenia (6.7 p.p.) and Switzerland (6.2 p.p.). In contrast, the marginal rate for one-earner married couples with two children was more than 5 p.p. higher than for single workers with no children in Canada (5.5 p.p.), the Netherlands (5.6 p.p.), Iceland (7.2 p.p.) and New Zealand (27.0 p.p.). These higher marginal rates arise because of the phase-out of income-tested tax reliefs and/or cash benefits. When an income-tested measure is phased out, the reduction in the relief or benefit compounds the increase in the tax payable. These programmes are set out in greater detail in the relevant country chapters in Part II of the Report.

Table 3.7 and Figure 3.7 show the incremental change to personal income tax and employee SSCs less cash benefits when gross wage earnings increased at the margin in 2024. As with the marginal tax wedge (Table 3.6), personal income tax and employee SSCs absorb between 25% and 55% of a worker's pay rise for single individuals without children at the average wage level in most countries. The marginal tax rate for the average worker was higher than 55% only in Belgium (55.6%) and lower than 25% in Chile (10.2%), Costa Rica (10.7%), Mexico (23.0%) and Korea (23.5%). As previously mentioned, no income tax was paid in Colombia at the average wage while SSCs are considered non-tax compulsory payments.

In twenty-seven OECD countries, the **net personal marginal tax rate** for one-earner married couples with two children at the average wage level was either the same as or within 5 p.p. of that for single persons with no children. The marginal rate was more than 5 p.p. lower for the one-earner married couple in seven countries: France<sup>6</sup> (22.1 p.p.), Luxembourg (16.2 p.p.), the United States (10.0 p.p.), Portugal (8.5 p.p.), Germany (8.0 p.p.), Slovenia (7.8 p.p.) and Switzerland (6.6 p.p.). In contrast, the marginal rate for one-earner married couples with two children was more than 5 p.p. higher than it was for single persons with no children in Canada (5.7 p.p.), the Netherlands (6.2 p.p.), Iceland (7.7 p.p.) and New Zealand (27.0 p.p.). Similar to the marginal tax wedges, these higher net personal marginal rates arise because of the phase-out of income-tested tax reliefs and/or cash transfers.

Table 3.8 shows the percentage increase in net income relative to the percentage increase in gross wages when the latter increased by 1 currency unit in 2024, i.e. the elasticity of after-tax income.<sup>7</sup> Under a proportional tax system, net income would increase by the same percentage as the increase in gross earnings, in which case the elasticity is equal to 1. The more progressive the system is – at the income

level considered – the lower this elasticity will be. In the case of the one-earner married couple with two children at the average wage (column 5 of Table 3.8), the most progressive systems of income tax plus employee SSCs in 2024 were found in New Zealand (0.45), Belgium and Italy (both 0.55), the Netherlands (0.58) and Ireland (0.61). In contrast, Chile (0.96), France<sup>8</sup> (0.95) and Mexico (0.88) either implemented or were close to a proportional system of income tax plus employee SSCs for this household type. For Colombia (0.96) and Costa Rica (1.0), no income tax was paid at that level of earnings. In Colombia, SSCs are considered non-tax compulsory payments and not included in the *Taxing Wages* calculations. However, the household's cash benefit remained fixed while the gross wage increased. As a result, the percentage increase in net income was slightly less than the percentage increase in the gross wage.

Table 3.9 provides a different elasticity measure: the percentage increase in net income relative to the percentage increase in labour costs (i.e. gross wage earnings plus employer SSCs and payroll taxes) when the latter rose by 1 currency unit in 2024.<sup>9</sup> In this case, taxes and SSCs paid by employers are also part of the analysis. In nineteen countries, the value of this elasticity lay between 0.50 and 0.97 for the eight selected household types. The elasticity was below 0.50 for single parents earning 67% of the average wage in the United States and Luxembourg (both at 0.49), Belgium (0.44), the Netherlands (0.43), New Zealand (0.38), the United Kingdom (0.34), France<sup>10</sup> (0.31), and Australia and Canada (both 0.24) and for one-earner married couples at the average wage level with two children in New Zealand (0.45). In contrast, the elasticity was between 0.97 and 1.0 for most household types in Costa Rica and Chile and some household types in Canada, Colombia, Germany and Hungary, and for one household type in Estonia and Lithuania. Using this elasticity measure, the income tax system was regressive for a single individual at 67% of the average wage with and without children in Mexico (1.01) and for a single individual at 167% of the average wage in Germany (1.04) and Austria (1.07).

Table 3.10 and Table 3.11 set out gross wage earnings and net income for the eight household types in 2024 after all amounts have been converted into U.S. dollars with the same purchasing power. Single workers earning the average wage had a net income above USD 50 000 in fifteen countries: Switzerland (USD 84 728), the Netherlands (USD 63 080), Norway (USD 61 772), Ireland (USD 61 567), the United Kingdom (USD 60 361), Luxembourg (USD 60 149), Iceland (USD 59 936), Austria (USD 58 796), Korea (USD 56 464), Germany (USD 55 807), Canada (USD 55 670), Australia (USD 55 316), the United States (USD 53 401), Denmark (USD 53 393) and Belgium (USD 52 101) (Table 3.10 column 4). The lowest levels (below USD 25 000) were in Mexico (USD 17 813) and Colombia (USD 20 848). In the case of a one-earner married couple with two children at the average wage level, families had net incomes above USD 60 000 in Australia, Austria, Belgium, Canada, Denmark, Germany, Iceland, Ireland, Korea, Luxembourg, the Netherlands, Norway, Switzerland, the United Kingdom and the United States, with the lowest level again observed in Colombia and Mexico (Table 3.11). With the exceptions of Costa Rica, Mexico and Türkiye, the net income for the one-earner married couple in OECD countries was higher than for the single individual (with both household types at the average wage level) due to the favourable tax treatment of this household and/or the cash transfers to which they were entitled.

Table 3.12 and Table 3.13 show the corresponding figures to Table 3.10 and Table 3.11 for labour costs and net income in 2024. Thus, the 'net' columns in Table 3.10 and Table 3.11 are identical to those in Table 3.12 and Table 3.13, respectively. Usually, labour costs are significantly higher than gross wages, because any employer SSCs (including payroll taxes) are taken into account. If measured in US dollars with equal purchasing power, labour costs for single workers earning the average wage level (see Table 3.12) were highest (above USD 90 000) in France (USD 91 825), Ireland (USD 94 964), Norway (USD 97 059), the Netherlands (USD 97 164), Luxembourg (USD 100 830), Germany (USD 107 168), Belgium (USD 109 810), Switzerland (USD 109 886) and Austria (USD 110 886), and lowest (less than USD 30 000) in Colombia (USD 20 848) and Mexico (USD 22 523). Annual labour costs are equal to annual gross wage in Chile, Colombia and New Zealand. In those countries, neither compulsory employer SSCs nor payroll taxes paid to general government are levied on wages. However, employers in Chile and Colombia are subject to NTCPs.

Note: Net income is calculated as gross earnings minus personal income tax and employee social security contributions plus family benefits. The increase reported in the Table represents a form of elasticity. In a proportional tax system, the elasticity would equal 1. The more progressive the system at these income levels, the lower is the elasticity. The reported elasticities in Table 3.8 are calculated as  $(100 - \text{METR}) / (100 - \text{AETR})$ , where METR is the marginal rate of income tax plus employee social security contributions less cash benefits reported in Table 3.7 and AETR is the average rate plus employee social security contributions less cash benefits reported in Table 3.3.

1. Two-earner couple. Assumes a rise in the labour costs associated with the principal earner in the household.

1. Two-earner couple.

## Notes

<sup>1</sup> Tables 3.1 to 3.7 show figures rounded to the first decimal. Due to rounding, changes in percentage points that are presented in the text may differ by one-tenth of a percentage point relative to those in the Tables.

<sup>2</sup> France's tax schedule for 2024 has been adjusted for inflation in the 2025 budget bill. However, due to the late adoption of the 2025 budget bill, the indexation of the tax schedule and income tax parameters to inflation (of 1.8%) could not be incorporated into the *Taxing Wages* model for this Report. This results in higher estimated tax rates than those effectively in force.

<sup>3</sup> See note 2.

<sup>4</sup> In Colombia, the general social security system for healthcare is financed by public and private funds. The pension system is a hybrid of two different systems: a defined-contribution, fully-funded pension system; and a pay-as-you-go system. Each of those contributions are mandatory and more than 50% of total contributions are made to privately managed funds. Therefore, they are considered to be non-tax compulsory payments (NTCPs) (further information is available in the country details in Part II of the report). In addition, in Colombia, all payments for employment risk are made to privately managed funds and are considered to be NTCPs. Other countries also have NTCPs (please see <https://www.oecd.org/content/dam/oecd/en/topics/policy-issues/tax-policy/non-tax-compulsory-payments.pdf>).

<sup>5</sup> See note 2.

<sup>6</sup> See note 2.

<sup>7</sup> The reported elasticities in Table 3.8 are calculated as  $(100 - \text{METR}) / (100 - \text{AETR})$ , where METR is the marginal rate of income tax plus employee social security contributions less cash benefits reported in Table 3.7 and AETR is the average rate of income tax plus employee social security contributions less cash benefits reported in Table 3.3.

<sup>8</sup> See note 2.

<sup>9</sup> The reported elasticities in Table 3.9 are calculated as  $(100 - \text{METR}) / (100 - \text{AETR})$ , where METR is the marginal rate of income tax plus employee and employer social security contributions less cash benefits reported in Table 3.6 and AETR is the average rate of income tax plus employee and employer social security contributions less cash benefits reported in Table 3.1.

## **Graphical exposition of effective tax rates in 2024**

---

The chapter presents graphical expositions of effective tax rates on labour income in 2024 for gross wage earnings ranging from 50% to 250% of the average wage. These are illustrated in separate graphs for four household types and for each OECD member country. The household types are single taxpayers without children; single parents with two children; one-earner married couples without children and one-earner married couples with two children. The graphs are divided into two sets showing the components of the average and marginal tax wedge as a percentage of total labour costs. The graphs also show the net personal average and marginal tax rates.

---

The graphs in this section show effective tax rates on labour income in 2024 for gross wage earnings between 50% and 250% of the average wage (AW). For each OECD member country, there are separate graphs for four household types: single taxpayers without children, single parents with two children, one-earner married couples without children and one-earner married couples with two children. The net personal average and marginal tax rates ([the change in] personal income taxes and employee social security contributions [SSCs] net of cash benefits as a percentage of [the change in] gross wage earnings) are included in the graphs that show the average and the marginal tax wedge, respectively.<sup>1</sup>

The results for France for 2024 should be interpreted with caution because the indexation of the tax schedule and income tax parameters to inflation (of 1.8%) could not be incorporated in the *Taxing Wages* models for this Report. This omission, which was due to the late adoption of the 2025 budget bill, results in higher estimated tax rates in 2024 than those that were effectively in force.

The graphs illustrate the relative importance of the different components of the tax wedge: central government income taxes, local government income taxes, employee SSCs, employer SSCs (including payroll taxes where applicable) and cash benefits as a percentage of total labour costs. It should be noted that a decreasing share in total labour costs implies that the value of tax payments less benefits is not increasing as rapidly as the corresponding total labour costs. It does not necessarily imply that the value of payments less benefits is decreasing in cash terms.

Low-income households are treated favourably by the tax and benefit systems of many OECD countries. Negative central government income taxes are observed in Belgium because of the non-wastable tax credits for low-income workers and for dependent children; in Canada<sup>2</sup> because of the non-wastable working income tax benefit; in Austria, Czechia, Germany, Korea and the Slovak Republic because of non-wastable child tax credits; in Israel because of the non-wastable earned income tax credit (EITC) for families with children; in Luxembourg because of a tax credit for social minimum wage earners; in Poland because of a conditional refundable child tax credit; in Spain because of non-wastable tax credits for single parents; and in the United States because of the non-wastable EITC and the child tax credit. In Sweden, the charts show negative central government income taxes for the four household types due to an EITC; however, the tax credit is wastable in the sense that it cannot reduce the individual's total income tax payments to less than zero. The EITC is also deducted from the local government income tax.

In the majority OECD countries, the net personal average tax rate is negative for single parents or one-earner married couples at lower income levels, meaning that these household types do not pay income taxes or SSCs, or these payments are fully offset by cash benefits. For example, the net personal average tax rate becomes positive at more than 100% of the AW in Poland (at 109% of the AW for the single parent and the one-earner married couple with children) and the Slovak Republic (at 107% of the AW for the single parent and at 124% for the one-earner married couple with children). In Austria, Czechia, Israel, Korea, Poland the Slovak Republic and Spain, negative net personal average tax rates result from the combined effect of refundable tax credits and cash benefits. There are large variations in cash benefit levels across OECD countries. They represent about a quarter or more of total labour costs for low-income single parents and/or one-earner married couples with two children in Australia, Canada, France, Ireland, Lithuania, the Netherlands, New Zealand, Poland and the United Kingdom.

The marginal tax wedge is relatively flat across the earnings distribution in some countries because of flat SSCs and personal income tax rates. The marginal tax wedge for single taxpayers without children on incomes between 50% to 250% of AW is flat in Czechia (45.1%) and Hungary (41.2%). In Colombia, the marginal tax wedge for the single worker and the one-earner married couple without children is equal to zero up to 247% of the AW, as no personal income taxes is paid up to this level. For households with two children, the marginal tax rate is zero across the whole income range with the exception of a spike at 206% of the AW, which is caused by the loss of eligibility for the child-related cash transfer. Moreover, contributions to pension, health and employment risk insurance are considered to be non-tax compulsory payments (NTCPs)<sup>3</sup> and therefore are not counted as taxes in the *Taxing Wages* calculations. The

marginal tax wedge is also relatively constant in Iceland, the Slovak Republic and Türkiye. In Iceland, the marginal tax wedge for households without children is 40.2% on earnings below 130% of the AW, 47.6% on earnings at 130% and then 47.7% on earnings from 131% to 250% of the AW. In the Slovak Republic, the marginal tax wedge for the single worker is 45.9% on earnings below 149% of the AW, 48.4% on earnings at 149% and then 49.1% on earnings from 150% to 250% of the AW. In Türkiye, the marginal tax wedge for all household types is 47.8% on earnings up to 179% of the AW, 52.8% on earnings at 180% of the AW, and 53.6% on earnings from 181% to 250% of the AW.

SSCs are levied at flat rates in many OECD countries. Some countries have an earnings ceiling above which no additional SSCs have to be paid. The variations in the marginal SSCs are in general the same for the four family types, since the contribution rates or income ceilings do not vary depending on marital status or the number of dependent children. Within the income range of 50% to 250% of the AW, the marginal employer SSC rates fall to zero as a result of income ceilings in Germany (at 145% of the AW), Luxembourg (208%), the Netherlands (117%) and Spain (179%). Marginal employee SSC rates fall to zero in Austria (at 138% of the AW), Germany (145%), the Netherlands (205%), Spain (179%) and Sweden (115%). In Canada, the marginal employee SSC rate falls to zero at 84% of the AW. However, two spikes are observed at 82% and 227% of the AW. The Ontario Health premium, which is calculated on an income schedule, is a fixed payment that is adjusted when a taxpayer moves to a higher income bracket.

In addition, taxpayers may experience declining marginal employee and/or employer SSC rates as a percentage of total labour costs over some parts of the earnings range as their wage increases. This is observed in Austria, Belgium, Canada, France, Germany, Japan, Korea, Luxembourg, the Netherlands, Poland, Switzerland, the United Kingdom and the United States. Large decreases in marginal rates as a percentage of total labour costs are observed in Austria, where the employer SSC rate drops from 21.6% to 6.3% on earnings above 136% of the AW; in Japan, where the marginal employee and employer SSC rates drop from 12.7% to 5.3% and from 13.6% to 6.2% respectively on earnings above 142% of the AW; in Luxembourg, where the marginal employee SSC rate drops from 10.9% to 1.40% on earnings above 206% of the AW; in Poland, where the employee and employer SSCs rate drops from 15.3% to 10.8% and from 14.1% to 3.6% respectively on earnings above 242% of the AW; in the United Kingdom, where the marginal employee SSC rate drops from 7.0% to 1.8% of earnings above 96% of the AW; and in the United States, where the marginal employer and employee SSC rates drop from 7.1% to 1.4% on earnings above 237% of the AW.

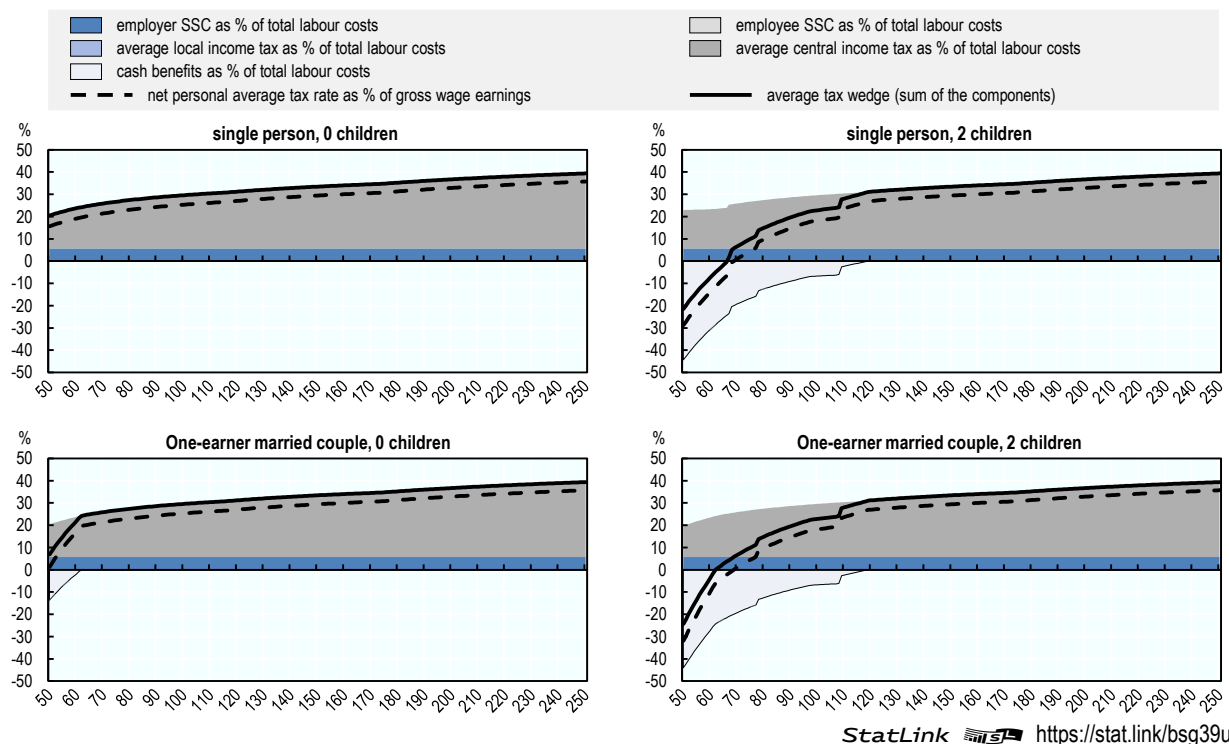

In Slovenia, the marginal employer SSCs are negative up to 57% of the AW. This is because the employer pays additional contributions on earnings that are below the social security minimum income threshold. This additional contribution decreases as earnings increase and is completely exhausted once the employee's earnings reach the social security minimum income threshold. The negative marginal employer SSC rates derive from the decreasing additional contributions.

Taxpayers face net personal marginal tax rates and wedges of about 70% or more in several of OECD countries at specific earnings levels. This is the case for taxpayers without children in Australia, Austria, Belgium, Chile, France<sup>4</sup>, Italy, Japan, Luxembourg, Mexico, Slovenia, Spain and the United Kingdom. They also apply to families with children in Australia, Austria, Belgium, Canada, Chile, Colombia, Czechia, France<sup>5</sup>, Greece, Ireland, Italy, Korea, Japan, Lithuania, Luxembourg, Mexico, New Zealand, Portugal, the Slovak Republic, Slovenia, Spain and the United Kingdom. In many countries, these high marginal tax rates are partly the result of reductions in benefits, allowances or tax credits that are targeted at low-income taxpayers as earnings rise.

The zigzag movement in the marginal tax burdens observed in some of the graphs arises when changes in taxes, SSCs and/or cash benefits for small rises in income vary over the income range in a non-continuous way. This is the case because of rounding rules in Germany, Japan, Luxembourg, Sweden and Switzerland; and the discrete characteristics of the PAYE (Pay As You Earn) tax credit, the spouse tax credit and the child transfers in Italy.

## Notes

<sup>1</sup> The marginal tax wedges in the graphs are calculated in a slightly different manner than the marginal tax rates that are included in the rest of the *Taxing Wages* publication. In *Taxing Wages*, marginal rates are usually calculated by increasing gross earnings by one currency unit (except for the spouse in the one-earner married couple whose earnings increase by 67% of the average wage). However, the '+1 currency unit' approach requires the calculation of marginal rates for every single currency unit within the income range included in the graphs. It otherwise would not be correct to draw a line through the different data points because the data for the income levels in between the different points would be missing. In order to reduce the required number of calculations, the marginal rates that are shown in the graphs are calculated by increasing gross earnings by 1 percentage point – each line in the graph therefore consists of 200 data points – instead of 1 currency unit.

<sup>2</sup> Although it is not visible on the charts, the central government income tax was negative for income levels below 47% of the AW for the single parent and the couple with or without children.

<sup>3</sup> In Colombia, the general social security system for healthcare is financed by public and private funds. The pension system is a hybrid of two different systems: a defined contribution, fully-funded pension system; and a pay-as-you-go system. Each of those contributions is mandatory and more than 50% of total contributions are made to privately managed funds. Therefore, they are considered to be non-tax compulsory payments (NTCPs) (further information is available in the country details in Part II of the report). In addition, in Colombia, all payments for employment risk are made to privately managed funds and are considered to be NTCPs. Other countries also have NTCPs (please see <https://www.oecd.org/content/dam/oecd/en/topics/policy-issues/tax-policy/non-tax-compulsory-payments.pdf>).

<sup>4</sup> France's tax schedule for 2024 has been adjusted for inflation in the 2025 budget bill. However, due to the late adoption of the 2025 budget bill, the indexation of the tax schedule and income tax parameters to inflation (of 1.8%) could not be incorporated into the *Taxing Wages* model for this Report. This results in higher estimated tax rates than those effectively in force.

<sup>5</sup> See note 4.

# 5

## Effective tax rates on labour income in 2023

---

The chapter presents the effective tax rates on labour income for the eight model household types for 2023. Tables 5.1 to 5.13 show a number of measures of the average tax burdens (tax wedge, personal tax rate, net personal tax rate, personal income tax rate and employee social security contribution rate) and the marginal rates (tax wedge and net personal tax rate). The results for two measures of tax progressivity are also considered: tax elasticity on gross earnings and labour costs. The table formats are identical to Tables 3.1 to 3.13 in Chapter 3, which show the effective tax rates on labour income in 2024.

---

The following tables show the effective tax rates on labour income for the eight household types covered by the *Taxing Wages* models in 2023. Single employees, without children, earning the average wage are shown in column 2 of the tables while one-earner married couples, with two children, earning the average wage are shown in column 5. Columns 1, 3-4 and 6-8 of the tables give corresponding results for the six other household types. Indicators presented in the tables can be compared with the corresponding indicators in Chapter 3, which show the results for 2024.

- Table 5.1 presents the total tax wedge (calculated as personal income tax plus employee and employer's social security contributions [SSCs] less cash benefits) by household type as a percentage of labour costs (gross wage plus employers' SSCs [including payroll taxes]). In the majority of countries, changes in the gap between total labour costs and the corresponding net take-home pay in 2024 compared with 2023 were within plus or minus one percentage point.
- Table 5.2 shows the combined burden of personal income tax and employee SSCs in the form of personal average tax rates as a percentage of gross wage earnings.
- Table 5.3 shows the net personal average tax rate, calculated as the total of personal income tax and employee SSCs less the amount of cash benefits as a percentage of gross wage earnings.
- Table 5.4 presents personal income tax due as a percentage of gross wage earnings.
- Table 5.5 provides employee SSCs as a percentage of gross wage earnings.
- Table 5.6 shows the marginal tax wedge (rate of personal income tax plus employee and employer SSCs and payroll taxes where applicable minus cash benefits) as a percentage of labour costs, when the gross wage earnings of the principal earner rose by 1 currency unit.
- Table 5.7 presents the marginal rate of personal income tax plus employee SSCs minus cash benefits (the net personal marginal tax rate) by household type and wage level, when the gross wage earnings of the principal earner rose by 1 currency unit.
- Table 5.8 shows the percentage increase in net income relative to the percentage increase in gross wages when the latter increases by 1 currency unit.
- Table 5.9 shows the percentage increase in net income relative to the percentage increase in labour costs (i.e. gross wage earnings plus employer social security contributions and payroll taxes) when the latter rises by 1 currency unit. The results shown in Tables 5.8 and 5.9 depend on the marginal and average tax rates.
- Table 5.10 to Table 5.13 report background information on levels of labour costs plus gross and net wages.

Note: It is assumed that gross earnings of the principal earner in the household rise. The outcome may differ if the wage of the spouse goes up, especially if partners are taxed individually.

1. Two-earner couple.

Note: Net income is calculated as gross earnings minus personal income tax and employees' social security contributions plus family benefits. The increase reported in the Table represents a form of elasticity. In a proportional tax system, the elasticity would equal 1. The more progressive the system at these income levels, the lower is the elasticity. The reported elasticities in Table 5.8 are calculated as  $(100 - \text{METR}) / (100 - \text{AETR})$ , where METR is the marginal rate of income tax plus employee social security contributions less cash benefits reported in Table 5.7 and AETR is the average rate plus employee social security contributions less cash benefits reported in Table 5.3.

1. Two-earner couple. Assumes a rise in the labour costs associated with the principal earner in the household.

## **Evolution of effective tax rates on labour income (2000-24)**

---

This chapter presents the evolution of effective tax rates on labour income between 2000 and 2024 for the eight household types. Tables 6.1 to 6.8 show the (average) tax wedge comprising income taxes plus employee and employer social security contributions (including any applicable payroll taxes) less cash benefits; Tables 6.9 to 6.16 provide the (average) burden of personal income taxes; and Tables 6.17 to 6.24 depict the (average) burden of income taxes plus employee social security contributions less cash benefits (net personal average tax rates).

---

## Long-term trends in labour taxation since 2000

This chapter presents the evolution of the effective tax rates on labour income for the eight household types depicted by the *Taxing Wages* models over the period from 2000 to 2024.

The results for France for 2024 should be interpreted with caution because the indexation of the tax schedule and income tax parameters to inflation (of 1.8%) could not be incorporated into the *Taxing Wages* models for this Report. This omission, which was due to the late adoption of the 2025 budget bill, results in higher estimated tax rates in 2024 than those that were effectively in force.

Tables 6.1 to 6.24, titled “Tables showing income taxes, social security contributions and cash benefits”, correspond to a tax burden measure for a particular household type. The discussion focuses on the main observable trends over the period and highlights important year-on-year changes.<sup>1</sup> Effective tax rates on labour income shown in this chapter all declined between 2000 and 2024 for all the household types.

- The fall over the period in the OECD average tax wedge ranged from 1.3 percentage points for single workers earning 167% of the average wage (AW) to 3.0 percentage points for single parents earning 67% of the AW.
- The decrease in the OECD average personal income tax rate ranged from 0.8 percentage points for single workers earning 100% of AW to 1.6 percentage points for single parents earning 67% of the AW.
- The OECD net personal average tax rate also declined for all household types in the period considered. The reduction ranged from 0.5 percentage points for single workers earning 167% of the AW to 1.7 percentage points for single parents earning 67% of the AW.

**Table 6.1. Income tax plus employee and employer contributions less cash benefits, single persons at 67% of average wage**

Tax burden as % of labour costs, single persons without children

1. Wage figures are based on the old definition of average worker (ISIC D, rev3.) for years 2000 to 2006.

## Note

<sup>1</sup> Tables 6.1 to 6.24 show figures rounded to the first decimal. Due to rounding, changes in percentage points that are presented in the text may differ by one-tenth of a percentage point relative to those in the tables.

# Australia

## (2023-2024 Income tax year)

---

This chapter includes data on the income taxes paid by workers, their social security contributions, the family benefits they receive in the form of cash transfers as well as the social security contributions and payroll taxes paid by their employers. Results reported include the marginal and average tax burden for eight different family types.

Methodological information is available for personal income tax systems, compulsory social security contributions to schemes operated within the government sector, universal cash transfers as well as recent changes in the tax/benefit system. The methodology also includes the parameter values and tax equations underlying the data.

The national currency is the Australian dollar (AUD). For the 2023-2024 income tax year AUD 1.52 was equal to USD 1. The average full-time worker earned AUD 103 794 in 2023-2024.

## Personal income tax system

### **Federal income tax**

#### *Tax unit*

Members of a family unit are taxed separately. However, individual eligibility for some tax offsets, as well as liability for some taxes, levies and surcharges, are at least partially dependent on the circumstances of other members of an individual's household.

#### *Tax allowances and credits*

##### **Standard tax reliefs**

- Basic reliefs: Income earned up to AUD 18 200 by resident taxpayers is subject to tax at a zero rate.
- Standard marital status reliefs: No relief available.
- Relief(s) for children: See Section 4.2 for more detail on transfers related to dependent children.
- Relief for social security contributions and other taxes: No such contributions are levied.
- Reliefs for low income earners: A tax offset worth a maximum of AUD 700 is available for low income earners called the Low Income Tax Offset. Taxpayers whose taxable income was less than or equal to AUD 37 500 in 2023-2024 are eligible to receive the full amount of the offset. Between taxable income ranges of AUD 37 501 and AUD 45 000, the offset is reduced by AUD 0.05 for every AUD 1 by which a taxpayer's taxable income exceeds AUD 37 500. When taxable income exceeds AUD 45 000, the offset is further reduced by 0.015 AUD for every AUD 1. The offset is no longer available once a taxpayer's taxable income exceeds AUD 66 667.
- Relief for mature age workers: No relief available.
- Relief for recipients of certain social security benefits: The Beneficiary Tax Offset is available for those who receive certain taxable social security benefits called 'rebatable benefits'. It ensures that a person who is wholly or mainly dependent on rebatable benefits, and does not have any other taxable income, is not liable for income tax. The amount of the Beneficiary Tax Offset available to an individual is determined by the total amount of the rebatable benefit(s) they receive in an income year.
- Relief for taxpayers who maintain a dependant who is genuinely unable to work: A taxpayer who maintains a dependant who is genuinely unable to work due to invalidity or carer obligations may be eligible for the Dependent (Invalid and Carer) Tax Offset. This tax offset is worth a maximum of AUD 3 152 in 2023-2024. To qualify for the offset in 2023-2024, the combined adjusted taxable income of the taxpayer and their spouse (where one exists) should not exceed AUD 112 578. The amount of offset that may be received is reduced by AUD 0.25 for every AUD 1 by which the dependant's adjusted taxable income exceeds AUD 282 and is no longer available once the dependant's adjusted taxable income exceeds AUD 12 890. This offset is not included in the Taxing Wages model.
- Relief for pensioners and seniors: The Seniors and Pensioners Tax Offset (SAPTO) is available to recipients of taxable Government Pensions, including the Age Pension. The SAPTO is also available to Australians who meet all of the Age Pension eligibility criteria except the income and/or asset tests. The SAPTO is worth up to AUD 2 230 for a single taxpayer, up to AUD 1 602 for each

member of a senior couple not separated by illness and AUD 2 040 for each member of a senior couple separated by illness. The offset is withdrawn at the rate of AUD 0.125 for every AUD 1 that a recipient's income exceeds their relevant shade out threshold dependent on their circumstances. For a single taxpayer, the offset is withdrawn from AUD 32 279 and is no longer available once income reaches AUD 50 119. For members of a couple not separated by illness, the offset is withdrawn from a combined income of AUD 57 948 and is no longer available once combined income reaches AUD 83 580.

- Other: No other standard relief available.

#### **Main non-standard tax reliefs applicable to an average worker include:**

- Relief for superannuation: Contributions to a low income spouse's superannuation attract an 18% rebate up to a maximum rebate of AUD 540. The income limit for a low income spouse is AUD 40 000. In 2023-2024, the Low Income Superannuation Tax Offset matches AUD 0.15 for each AUD 1 of concessional contributions from at least AUD 10 up to AUD 500 a year for eligible individuals with annual incomes up to AUD 37 000. In addition in 2023-2024, eligible individuals with incomes not exceeding AUD 58 445 can make non-concessional contributions and receive a co-contribution of 50%, up to a maximum of AUD 500. The co-contribution rate progressively decreases for incomes between AUD 43 445 and AUD 58 445, at a rate of AUD 0.03 per AUD 1 of income above AUD 43 445.
- Relief for private health insurance: For the 2023-2024 income year, there are different rebate amounts depending on age and income. For individuals below 65 years without dependants and with annual income for surcharge purposes below AUD 93 000 the rebate is 24.608% of the cost of cover for eligible private health care for the 2023-2024 income year. The same rebate rates apply for families (couples and individuals with at least one dependent child) below 65 years with annual income for surcharge purposes below AUD 186 000. The threshold is increased by AUD 1 500 for each dependent child after the first. The rebate percentages are reduced for individuals and families with annual incomes above these amounts. The rebate percentages are also higher for individuals and families aged 65 years or more.
- Other non-standard reliefs provided as deductions are:
  - subscriptions paid in respect of membership of a trade, business or professional association or union;
  - charitable contributions of AUD 2 or more to specified funds, authorities and institutions, including public benevolent institutions, approved research institutes for scientific research, building funds for schools conducted by non-profit organisations etc.; and
  - work-related expenses including cost of replacement of tools of trade, cost of provision and of cleaning protective clothing and footwear, travelling between jobs or travelling in the course of employment, and certain expenses related to working from home.

#### *Tax schedule*

##### **General rates of tax - resident individuals**

Taxable income (AUD)		
Not less than	Not more than	Tax at general rates on total taxable income
0	18 200	NIL
18 201	45 000	AUD 0.19 for each AUD in excess of AUD 18 200
45 001	120 000	AUD 5 092 + AUD 0.325 for each AUD in excess of AUD 45 000
120 001	180 000	AUD 29 467 + AUD 0.370 for each AUD in excess of AUD 120 000
180 001 and over		AUD 51 667 + AUD 0.450 for each AUD in excess of AUD 180 000

To nominally contribute towards the cost of basic medical and hospital care, a Medicare levy is imposed on the taxable incomes of resident taxpayers. In 2023-2024 the levy is applied at the rate of 2.0% of the taxable income of an individual.

Certain thresholds are applied before the Medicare levy is imposed. For taxpayers aged under Age Pension age in 2023-2024, an individual was not liable for the levy where their taxable income did not exceed AUD 26 000. A taxpayer in a couple or sole parent family who is not receiving Parenting Payment (see section 4.2), does not pay the levy if the taxable family income does not exceed AUD 43 846. Individual senior Australians of Age Pension age were not liable to pay the levy where their taxable income did not exceed AUD 41 089. Pensioner families (including couples and sole parents on Parenting Payment) and senior Australian families of Age Pension age did not become liable to pay any Medicare levy until their combined income in 2023-2024 exceeded AUD 57 198. The thresholds are increased by AUD 4 027 for each dependent child.

Where an individual's or family's taxable income exceeds these thresholds, the Medicare levy shades in at a rate of 10% of the excess taxable income over the threshold, until the levy is equal to 2.0% of the individual's or family's total taxable income.

Individual taxpayers who had income for surcharge purposes greater than AUD 93 000 in 2023-2024 (or if a couple had a combined income greater than AUD 186 000 plus AUD 1 500 for each dependent child after the first child) but who did not have a complying private health insurance policy, were liable for the Medicare levy surcharge. The surcharge rates are 1%, 1.25% and 1.5% depending on the taxpayer's income for surcharge purposes above these thresholds. The surcharge rate is applied as a flat rate on their taxable income, reportable fringe benefits and any amount on which family trust distribution tax has been paid. However, the majority of taxpayers with income above the thresholds purchase a complying policy and avoid incurring the surcharge. The surcharge is therefore not included in the Taxing Wages calculations.

### **State and local income taxes**

In Australia, no states or territories levy a tax based on a resident's income.

## **Social security contributions**

### ***Employees' contributions***

None. There is, however, a Medicare Levy which is based upon taxable income. See Section 1.1.3.

### ***Employers' contributions***

No contributions are collected from employers or employees specifically for pensions, sickness, unemployment or work injury benefits, family allowances or other benefits.

Part of Australia's retirement income system is the provision of compulsory employer contributions (the Superannuation Guarantee system). In 2023-2024 the Superannuation Guarantee required employers to pay 11% on top of employees' gross ordinary time earnings to an approved superannuation fund. There is also a limit to the Superannuation Guarantee. In each quarter any earnings beyond a threshold are not covered by the Superannuation Guarantee. This threshold is indexed to a measure of average earnings. In the 2023-2024 tax year this threshold was AUD 62 270 per quarter. The Superannuation Guarantee rate will increase by 0.5 percentage points each year until it reaches 12% in 2025-26.

These contributions are not reflected in the Taxing Wages calculations because they are not a form of taxation (they are not an unrequited transfer to general government). While employers are legislatively required to make contributions to approved superannuation funds, superannuation funds are private,

although subject to regulation. Employers' contributions are generally made to individual accounts and form part of employees' personal superannuation assets. Some defined benefit schemes for public sector employees and private defined benefit schemes also exist. The employee may take superannuation benefits as either a lump sum payment or pension on retirement. Accordingly, superannuation contributions are reflected in the Non-Tax Compulsory Payment calculations.

## Other taxes

### ***Pay-roll tax***

Australian State Governments levy pay-roll taxes on wages, cash or in kind, provided by larger employers to their employees. The rates of pay-roll tax, thresholds and deductions differ between States. In New South Wales, the State with the largest population, the pay-roll tax rate in 2023-2024 was 5.45% for employers with total Australian wages in excess of AUD 1 200 000. Employers are entitled to an exemption from tax, or a pro-rated pay-roll tax threshold, on wages paid in New South Wales up to a maximum of AUD 1 200 000. The exempt amount is reduced based on the proportion of the employer's New South Wales pay-roll to its total Australian pay-roll.

## Universal cash transfers

### ***Transfers related to marital status***

There are no cash transfers made on a universal basis to married couples.

### ***Transfers related to dependent children***

- Family Tax Benefit Part A (FTB(A)) is paid to a parent, guardian or an approved care organisation to help families meet the costs of raising children. For 2023-2024, the maximum rate of FTB(A) is payable where the combined adjusted taxable income of the family does not exceed AUD 62 634 per year, after which it tapers at a rate of AUD 0.20 per AUD 1 of income until an income limit that is determined by the number and age of dependent children. The base rate of FTB(A) is payable where the combined adjusted taxable income of the family is between the income limit and AUD 111 398, after which the payment shades out at the rate of AUD 0.30 per AUD 1 of income over the ceiling until the payment is nil. The base rate of payment is AUD 1 784.85 per annum (excluding the end of year supplement) for dependent children aged under 18 and for dependent full time students aged 16 to 19. A higher FTB(A) benefit is available for lower income earners, and the value of this benefit is dependent on the age and number of children. For 2023-2024 families may receive a maximum payment (excluding the end of year supplement) of AUD 5 562.60 per annum for each child aged under 13 years and AUD 7 234.30 per annum for each child aged 13 to 15 years and for each child aged 16 to 19 in full time secondary school. For 2023-2024 an end of year supplement of AUD 879.65 per child is also available for families with a combined adjusted taxable income of less than AUD 80 000. However, people receiving any social security allowances or pensions automatically qualify for the maximum higher benefit. The attached calculations assume each dependant is between 5 and 12 years of age.
- Family Tax Benefit Part B (FTB(B)) is targeted at couples with one main income and sole parent families. Eligibility for FTB(B) if you are a single parent or grandparent carer is contingent upon having a child under the age of 16 or a qualifying dependent full-time student up to of the end of the calendar year they turn 18. Eligibility for FTB(B) if you are a member of a couple with one main income is contingent upon having a dependent child aged under 13. There are two separate income

tests applied to the parent(s). The parent earning the higher amount (or the sole parent, in the case of single parent families) must have an adjusted taxable income less than AUD 112 578 for the financial year for the family to be eligible. A secondary earner income threshold is also applied to the parent earning the lower amount. For 2023-2024, this threshold is AUD 6 497, above which the entitlement is reduced by AUD 0.20 for each AUD 1 of income. There is no secondary earner income test applied to sole parents. For 2023-2024, the maximum payment is AUD 3 730.30 (including a one-off supplement of AUD 430.70 paid at the end of the financial year) if the youngest dependent child is aged between 5 and 15 (or up to the end of the calendar year they turn 18 years if the dependent child is a full-time student), and AUD 5 161.10 (including a one-off supplement of AUD 430.70 paid at the end of the financial year) if there is at least one child under 5 years. The attached calculations assume each dependant is between 5 and 12 years of age.

- Recipients of the Family Tax Benefit may elect to receive the benefit in fortnightly instalments or as an end of year lump sum payment.
- A Newborn Supplement and Newborn Upfront Payment may be paid to families for each baby born from 1 March 2014. To be eligible families will need to be eligible for FTB(A) and not be accessing Parental Leave Pay for that child. For multiple births, Parental Leave Pay may be payable for one child and Newborn Supplement for the other child or children. The total value of the Newborn Supplement and Newborn Upfront Payment in 2023-2024 is up to AUD 2 565.65 for the first child (and all multiple births) and up to AUD 1 283.46 for subsequent children.
- Paid Parental Leave is provided through Parental Leave Pay (PLP) which can be shared with an eligible partner. Previously, Dad and Partner Pay (DAPP) could be claimed, however, it has been combined into PLP as of 1 July 2023. Eligible parents with a child born or adopted from 1 July 2023 will receive up to 20 weeks' pay at the national minimum wage (AUD 882.75 per week before tax) in 2023-2024. For partnered parents, generally the most PLP a person can take is 18 weeks as 2 weeks are reserved for each partner and a maximum of 2 weeks can be taken concurrently. Single parents are eligible for the full 20 weeks. The date of the child's birth or adoption will determine how many PLP weeks are available as the scheme undergoes an expansion to 26 weeks by 1 July 2026 and the weeks reserved for each partner increasing. The total number of PLP days do not have to be used in a continuous block but must be taken within 2 years of the child's birth or adoption. Claimants must be caring for a newborn or recently adopted child and must have worked for at least 10 of the 13 months prior to the birth or adoption, and for at least 330 hours in that 10 month period with no more than a twelve week gap between two working days. To be eligible an individual's adjusted taxable income must be equal to or less than an income test threshold in the financial year prior to the date of claim or date of birth or adoption, whichever is earlier. The individual income test threshold that applies for children born or adopted from 1 July 2023 is AUD 168,865 (for the assessed 2022-23 financial year). If an individual does not meet the individual income test then a family income test can be used which assesses family adjusted taxable income. The family income test threshold that applies for children born or adopted from 1 July 2023 is AUD 350,000 (for the assessed 2022-23 financial year). PLP and Newborn Supplement cannot be paid for the same child. A person cannot claim FTB(B) while they are receiving PLP.
- Child Care Subsidy (CCS) is a means-tested payment which assists families with the cost of approved child care services. CCS is payable to eligible families with incomes up to AUD 530 000. A percentage of the cost of childcare is subsidised. The applicable percentage is 90 per cent for families with income less than AUD 80 000 and reduces by 1 per cent for each AUD 5 000 of income above AUD 80 000, until it reaches 0 per cent for families earning AUD 530 000. Families with more than one child aged 5 or under received a higher subsidy for the second and subsequent children. They receive the maximum subsidy percentage of 95 per cent up to a maximum income threshold of AUD 183 118. In 2023-2024, there was no annual cap on the CCS. The attached calculations assume no childcare usage.

## ***Other transfers***

Income support payments in Australia are assessed on fortnightly income. The descriptions below present annualised estimates of fortnightly rates and thresholds by summing up applicable rates across the 2023-2024 year. The modelled results presented in *Taxing Wages 2023-2024* reflect people who have constant income over an entire year. In practice, it is common for fortnightly payment values to fluctuate as recipients' circumstances change.

### ***JobSeeker Payment***

JobSeeker Payment is the primary taxable payment payable to people aged from 22 years to Age Pension age (67 years in 2023-2024) who are unemployed or are regarded as unemployed. JobSeeker Payment is also payable to a member of a couple if their youngest child is aged 6 years or more and to single parents if their youngest child is aged 14 years or more. It is typically conditional on recipients fulfilling a personal Job Plan, which typically involves taking part in activities such as job seeking or training. In 2023-2024 the annual JobSeeker amount for singles without dependants (that are not eligible for the higher payment rate) was AUD 19 237.14 and for partnered individuals was AUD 17 593.42. Recipients are also eligible for an Energy Supplement, and potentially other supplementary payments. These payments typically taper out at a rate of AUD 0.50 per AUD 1 for incomes between AUD 3 900 and AUD 6 656, and reduce at a rate of AUD 0.60 per AUD 1 for incomes over AUD 6 656. Under the thresholds and taper rates that applied in 2023-2024, the JobSeeker payment may be available to some full-time workers under the OECD definition of 30 or more hours of work per week. The JobSeeker Payment for partnered individuals reduces by AUD 0.60 for each AUD 1 of their partner's income above AUD 34 970. For single principal carers with dependent child or children, it reduced at a rate of AUD 0.40 per AUD 1 for incomes over AUD 3 900.

### ***Parenting Payment***

Parenting Payment is a taxable payment payable to low income families with responsibility for the care of a young child. Partnered persons are eligible if they have a qualifying child under six years of age, and sole parents are eligible if they have a qualifying child under fourteen years of age.

In 2023-2024 the maximum annual amount of Parenting Payment (Partnered) (PP(P)) was AUD 17 593.42. Only one parent in a couple can be entitled to PP(P). The maximum annual amount of Parenting Payment (Single) (PP(S)) in 2023-2024 was AUD 25 222.34. Recipients are also eligible for an Energy Supplement, and potentially other supplementary payments. These payments are subject to income and assets tests. The PP(P) tapers out at a rate of AUD 0.50 per AUD 1 of income over AUD 3 900 up to AUD 6 656, and reduces at a rate of AUD 0.60 per AUD 1 for income over AUD 6 656. Under the PP(P) income test, a spouse typically receives a reduced Parenting Payment, tapering at a rate of AUD 0.60, when the higher earning partner's income exceeds AUD 34 970. If the spouse has little or no income (less than AUD 3 900 per annum), he or she would not receive any Parenting Payment when the higher earning partner's income exceeds AUD 63 688. PP(S) reduces by AUD 0.40 for each AUD 1 of income above AUD 5 579.60 plus AUD 639.60 for each child other than the first.

### ***Pharmaceutical Allowance***

Pharmaceutical Allowance (PA) is a non-taxable supplementary payment payable to eligible persons to help with medicine costs; for example, persons who receive the PP(S). PA is added to the maximum basic rate of PP(S) before a person's PP(S) entitlement is calculated. Anyone with a PP(S) entitlement, after PA has been added, receives the full amount of PA. For 2023-2024, the payment is AUD 174.20 for singles and AUD 87.10 for coupled individuals.

### ***Telephone Allowance***

A non-taxable Telephone Allowance is available on a quarterly basis to eligible individuals, including individuals who receive PP(S). The basic rate of the Telephone Allowance is AUD 140.37 for 2023-2024.

### *Energy Supplement*

The Energy Supplement (ES) is an extra payment to help with energy costs, paid alongside certain income support payments. The ES is not indexed. The amount of the supplement varies depending on the main income support payment. FTB(A) and FTB(B) recipients are only eligible for the ES if they have been continuously eligible for their payment since 19 September 2016.

- For eligible FTB(A) recipients, the maximum amount of ES is AUD 91.25 per year for each child under 13 years and AUD 116.80 for each child aged 13 to 15 years and for each child aged 16 to 19 in full time secondary school.
- For eligible FTB(B) recipients, the amount of ES is AUD 73.00 per year where the youngest child is under 5 years, and AUD 51.10 per year where the youngest child is aged 5 to 18 years.
- Recipients of PP(P) receive AUD 205.40 annually, and recipients of PP(S) receive AUD 312.
- For JobSeeker Payment recipients, the ES is typically AUD 228.80 annually for singles without dependents, and AUD 205.40 for partnered individuals.

The calculations assume families and individuals are eligible for the energy supplement as a significant proportion of FTB(A) and FTB(B) recipients were eligible for the supplement in 2023-2024.

## **Recent changes in the tax/benefit system**

### *Changes to Paid Parental Leave*

Dad and Partner Pay and Parental Leave Pay combined into one payment for children born or adopted from 1 July 2023.

### *Increases to JobSeeker and Student Payments*

On 20 September 2023, the base rates of working age and student payments, including JobSeeker Payment, Youth Allowance, Parenting Payment (Partnered), Austudy, ABSTUDY, Disability Support Pension (Youth), and Special Benefit, increased by \$40 per fortnight.

Eligibility for the existing higher rate of JobSeeker Payment was extended to single recipients aged 55 to 59, who are on payment for nine or more continuous months. Previously the qualifying age for this higher rate was 60.

### *Increases to Parenting Payment (Single)*

From 20 September 2023, eligibility for Parenting Payment (Single) was extended to single principal carers with a youngest dependent child under 14 years (up from 8 years).

### *Changes to Superannuation Guarantee*

Before 1 July 2022, Superannuation Guarantee did not have to be paid for a worker earning less than AUD 450 a month. From 2022-23 onwards, this threshold was removed. Superannuation Guarantee must now be paid to all workers 18 and older regardless of their earnings.

## **Memorandum items**

### ***Identification of an average worker***

The source of the information used in replying to the questionnaire was the Australian Bureau of Statistics (ABS) publication Average Weekly Earnings — Australia. The survey is now conducted on a biannual basis (it was previously conducted on a quarterly basis up to the June 2012 quarter) and is based on a

representative sample of employers in each industry. As a result of this change in frequency, average weekly earnings for the 2023-2024 income tax year have been calculated as the average of the two biannual figures (November 2023 and May 2024 (released in August 2024)).

In August 2009, the ABS redesigned the survey and replaced the industry classification based on the 1993 edition of the Australian and New Zealand Standard Industrial Classification (ANZSIC), which had been in use since 1994, with the 2006 edition of ANZSIC. The 2006 edition of ANZSIC was developed to provide a more contemporary industrial classification system, taking into account issues such as changes in the structure and composition of the economy, changing user demands and compatibility with major international classification standards. Accordingly, the average wage figure for 2010 and later years is inconsistent with that provided for previous years.

All wage and salary earners who received pay for the reference period are represented in the Survey of Average Weekly Earnings (AWE), except:

- members of the Australian permanent defence forces;
- employees of enterprises primarily engaged in agriculture, forestry and fishing;
- employees of private households;
- employees of overseas embassies, consulates, etc.;
- employees based outside Australia; and
- employees on workers' compensation who are not paid through the payroll.

Also excluded are the following persons who are not regarded as employees for the purposes of this survey:

- casual employees who did not receive pay during the reference period;
- employees on leave without pay who did not receive pay during the reference period;
- employees on strike, or stood down, who did not receive pay during the reference period;
- directors who are not paid a salary;
- proprietors/partners of unincorporated businesses;
- self-employed persons such as subcontractors, owner/drivers, consultants;
- persons paid solely by commission without a retainer; and
- employees paid under the Paid Parental Leave Scheme.

The sample for the AWE survey, like most ABS business surveys, is selected from the ABS Business Register which is primarily based on registrations with the Australian Taxation Office's (ATO) Pay As You Go Withholding (PAYGW) scheme (and prior to 1 June 2000 the Group Employer (GE) scheme). The population is updated quarterly to take account of:

- new businesses;
- businesses which have ceased employing;
- changes in employment levels;
- changes in industry; and
- other general business changes.

Earnings comprise weekly ordinary time earnings and weekly overtime earnings.

Weekly ordinary time earnings refers to one week's earnings of employees for the reference period attributable to award, standard or agreed hours of work. It is calculated before taxation and any other deductions (e.g. board and lodging) have been made. Included in ordinary time earnings are award, workplace and enterprise bargaining payments, and other agreed base rates of pay, over award and over agreed payments, penalty payments, shift and other allowances; commissions and retainers; bonuses and similar payments related to the reference period; payments under incentive or piecework; payments under

profit sharing schemes normally paid each pay period; payment for leave taken during the reference period; all workers' compensation payments made through the payroll; and salary payments made to directors. Excluded are overtime payments, retrospective pay, pay in advance, leave loadings, severance, termination and redundancy payments, and other payments not related to the reference period.

Weekly overtime earnings refers to payment for hours in excess of award, standard or agreed hours of work.

### ***Employers' contribution to private health and pension scheme***

In Australia very few employers make any contributions towards health schemes for their employees, especially where the employee is at a wage level comparable to that of an average production worker.

Employer contributions to pension schemes are primarily through the superannuation system. This is described in section 2.2.

## 2023-24 Tax Equations

The equations for the Australian system in 2023-2024 are mostly repeated for each individual of a married couple. However, the spouse credit is relevant only to the calculation for the principal earner and the calculation of the Medicare levy uses shading-in rules which depend on the levels of earnings of the spouses. The basis of calculation is shown by the Range indicator in the table below.

The functions which are used in the equations (Taper, MIN, Tax etc) are described in the technical note about tax equations. Variable names are defined in the table of parameters above, within the equations table, or are the standard variables “married” and “children”. A reference to a variable with the affix “\_total” indicates the sum of the relevant variable values for the principal and spouse. And the affixes “\_princ” and “\_spouse” indicate the value for the principal and spouse, respectively. Where the calculation for one earner considers variables for the other earner, the affix “\_oth” is used. Equations for a single person are as shown for the principal, with “\_spouse” values taken as 0.

	Line in country table and intermediate steps	Variable name	Range	Equation

Key to range of equation B calculated separately for both principal earner and spouse P calculated for principal only (value taken as 0 for spouse calculation) J calculated once only on a joint basis. Key refers to an optimisation of benefits i.e. Parenting Payment for principal and JobSeeker Payment for spouse versus Parenting Payment for spouse and JobSeeker Payment for principal.

# Austria

---

This chapter includes data on the income taxes paid by workers, their social security contributions, the family benefits they receive in the form of cash transfers as well as the social security contributions and payroll taxes paid by their employers. Results reported include the marginal and average tax burden for eight different family types.

Methodological information is available for personal income tax systems, compulsory social security contributions to schemes operated within the government sector, universal cash transfers as well as recent changes in the tax/benefit system. The methodology also includes the parameter values and tax equations underlying the data.

The Austrian currency is the Euro (EUR). In 2024, EUR 0.92 was equal to USD 1. In that year, the average worker in Austria earned EUR 61 699 (Secretariat estimate).

## Personal Income Tax

### **Central government income tax**

#### *Tax unit*

Each person is taxed separately. However, the Austrian taxation system follows the “ability-to-pay” principle. Several tax reliefs depend on non-personal characteristics but requirements related to special life circumstances, including such connected to the family situation given.

#### *Tax allowances*

##### **Standard tax reliefs**

- Work related expenses: a tax allowance of at least EUR 132 is available to all employees.
- Social security contributions and connected contributions (see the Section on Compulsory Social Security Contributions to Schemes Operated within the Government Sector).

##### **Non-standard tax reliefs**

- Mainly work related expenses (‘Werbungskosten’) are - if qualified - deductible in the amount effectively expended.
- Traffic relief depending on the distance between home and working place as well as the availability of public transport.

The following allowances are deductible from income (EUR per month):

		Public transport	
		Available	Not available
more than	2 km	0	31
more than	20 km	58	123
more than	40 km	113	214
more than	60 km	168	306

- Tax-free wage supplements exist for dirty, hard, dangerous, night, weekend and holiday work and overtime. The supplement for 10 hours of overtime up to EUR 120 per month is tax free, while other supplements are tax free up to EUR 400 (EUR 600 for night work) per month:
- Special expenses (‘Sonderausgaben’): Tax allowances for contributions to state-approved churches up to EUR 600 per year and for donations up to 10% of income for research and humanitarian purposes, environmental protection, fire brigades, civil protection, etc.
- In response to the increased popularity of working from home two new specific legal regulations have been introduced in 2021. First, expenses for ergonomic office furniture (e.g. desks, swivel chairs or desk lamps) are tax-deductible in a sum of up to EUR 300 per year. Second, to compensate for additional expenses, a lump-sum allowance of EUR 3 per day worked from home can be deducted. This is possible for a maximum of 100 home office days per year. Thus, up to EUR 300 per year and employee can be left tax-free. One option is that the employer can pay out

up to 3 euros per home office day tax-exempt. If the tax-free maximum amount of EUR 3 per day is not used up or if the employer does not grant a lump sum at all, the employee can claim the difference as income-related expenses.

### Rate Schedule

For 2024 the tax schedule is:

Income (EUR) up to	Marginal rate %
12,816	0
20,818	20
34,513	30
66,612	40
99,266	48
1 000 000	50
Above	55 *)

\* The top marginal tax rate of 55% applies only until 2025.

There is a special taxation other than the normal tax schedule for Christmas and leave bonus to the extent that their sum does not exceed two average monthly payments (1/6 of current income) or EUR 83 333. Otherwise the tax amount is calculated according to the following formula:

Income from Christmas and leave bonus (EUR) up to	Marginal rate %
2,330	0
2,757.5	30
25 000	6
50 000	27
83 333	35.75
Above	50/55

If income for Christmas and leave bonus exceeds EUR 83 333, the exceeding amount is added to current income and taxed accordingly using the regular rate schedule (MTR of 50% or 55%, see above).

### Tax credits

#### Standard tax credits:

- Traffic (commuting) tax credit of up to EUR 1,215, composed by the basic traffic tax credit of EUR 463 and a supplement of EUR 752. In the case of a current income above EUR 18,499, the tax credit is faded out uniformly to EUR 463 for income above EUR 28,326. For commuters with a traffic allowance (see section on Main non-standard tax reliefs applicable to an average worker) the basic traffic tax credit is EUR 798. Thus, the deductible amount accumulates to a maximum of EUR 1,261.

If the overall income tax liability of current income is negative, a refund of social security contributions applies. The refund amounts to the absolute value of the negative result of the tax calculation for current income, limited to 55% of overall social security contributions paid. The refundable amount is capped at EUR 1,331 (the case for commuters with a traffic allowance earning below EUR ). The standard case, however, allows a refund of up to EUR 1,215.

The following tax credits exist for taxpayers with children:

- Non-payable family tax credit of EUR 2,000.16 each child (EUR 700 if the child is older than 18 years). There exist several options for allocating the credit between the eligible parties. The parents can split up the tax credit one half each or one parent receives the full benefit. The allocation can be defined for each child separately.

- Child tax credit of EUR 816.6 (EUR 67.8 per month) per child. This tax credit is paid together with child allowances and is not connected with an income tax assessment. Therefore, it is treated as a transfer in this Report (similar treatment as in the OECD Revenue Statistics). Sole earner or single parent tax credit for families with children: The sole earner credit is not given when a spouse's yearly income exceeds EUR 6,937. The single parent credit is not granted if the parent lives more than 6 months per calendar year with a partner. This tax credit is EUR 572 for one child and increases by EUR 202 for the second child and by EUR 255 for the third and every additional child. This tax credit is non-wastable and can be paid as a negative income tax (in addition to the refund of social security contributions in respect of the traffic tax credit).
- Taxpayers with an income tax liability below EUR 700 receive an additional transfer, the so-called 'Kinderermehrbetrag'. If the income tax liability (exclusive of tax credits) is lower than EUR 700 (in the case of one child), the difference of EUR 700 and the correspondent tax liability is refunded. The maximum amount payable is EUR 700 for each child.

### Non-standard tax credit

- Additional traffic tax credit in case of entitlement to traffic relief according to the distance between home address and working place (see Main non-standard tax reliefs applicable to an average worker). In this case employees are entitled to an additional yearly traffic tax credit of EUR 2 per km distance from home to working place.
- Tax payers who make legally required alimony payments to their child qualify for an alimony tax credit of EUR 420 (EUR 35 per month). For a second child, the credit is EUR 52 per month. For every other child the monthly deductible amount is EUR 69. The alimony tax credit is non-payable.
- A tax credit for retired persons which amounts to EUR 1,405 for single earners with income up to EUR 23,043 if the spouse's income does not exceed EUR 2,545. Otherwise, the tax credit is EUR 954. The tax credit is linearly reduced to 0 for incomes between EUR 20,233 (EUR 23,043 for sole earners) and EUR 29,482. If the income tax liability is negative, a refund of social security contributions applies. The refund is limited to 80% of total social security contributions paid, respectively to EUR 637.

### State and local income taxes

None.

## Compulsory Social Security Contributions to Schemes Operated within the Government Sector

### Employee and Employer Social Security Contributions

	Ceilings (EUR)		Rates (%)	
	Regular wage per month	Christmas and leave bonus	Employee <sup>(2)</sup>	Employer <sup>(3)</sup>
Health insurance	6,060	12,120	3.87	3.78
Unemployment insurance	6,060	12,120	<sup>(4)</sup>	2.95
Pension insurance	6,060	12,120	10.25	12.55
Accident insurance	6,060	12,120	--	1.10
Contribution to the labour chamber	6,060	<sup>(1)</sup>	0.50	--
Contribution for the promotion of residential building	6,060	<sup>(1)</sup>	0.50	0.50
Addition to secure wage payments in the case of bankruptcy	6,060	12,120	--	0.1

1. No contribution on Christmas and leave bonus. In Revenue Statistics, the contribution to the labour chamber is accounted under Taxes on Income of Individuals (1110). The total of contributions for the promotion of residential buildings is included in Taxes on payroll (3000).
2. There is an income threshold for employee contributions of EUR 518.44 per month.
3. A new program has been introduced on 1 January 2004 for severance payments. Employers are required to pay 1.53% of gross wages for employees whose employment started after 1 January 2003. If the employer and employee opt to participate in the new program. This contribution is seen as a non-tax compulsory wage-related payment.
4. Employees' unemployment insurance rate is lower for small incomes. In 2024, it is zero for monthly earnings up to EUR 1,951, 1% up to EUR 2,128, 2% up to EUR 2,308 and 2.95% above.

### ***Payroll taxes***

There are two payroll taxes which are levied on employers for all private sector employees with a monthly gross wage total of more than EUR 1,095: the contribution to the Family Burden Equalisation Fund (3.7%) and the Community Tax (3%). If the assessment basis does not exceed 1,460 EUR per calendar month, it is reduced by 1,095 EUR. The wage-dependent part of the contribution to the Austrian Economic Chamber (listed under heading 1000, Taxes on profits, OECD Revenue Statistics), which is levied, together with the contributions to the Family Burden Equalisation Fund, at different rates depending upon the Länder Chamber (average rate is approximately 0.4%), is not taken into account. The contribution for the promotion of residential buildings (listed under heading 3000, Taxes on payroll, OECD Revenue Statistics) is included in the social security contributions shown above. It is levied by the Health Insurance Companies on monthly (current) income along with the other social security contribution amounts.

## **Universal Cash Transfers**

### ***Transfers related to marital status***

No recurrent payments.

### ***Transfers for dependent children***

A family allowance is granted for each child. The monthly payment is EUR 132.3 for the first child, EUR 148.7 for the second, EUR 176.5 for the third and is further increased for each additional child. It rises by EUR 9.2 for children above 3 years of age, EUR 31.9 for children above 10 years of age and by EUR 59.3 for students (above 19 years of age). The taxing wages calculations only consider households with 2 children aged between 6 and 11 inclusive.

Parents are entitled to a childcare transfer, introduced in 2002. The flexibility of the childcare transfer was again increased significantly. The entitled parent can choose the period of payments between 365 and 851 days (if they split up parental leave: 456 and 1,063 days) resulting in a transfer of EUR 16.87 (in case of 851/1,063 days) to EUR 39.33 per day (in case of 365/456 days). Also, instead of fixed amounts the parents can opt for 80% of the last net-earning, limited to EUR 76,6 per day (14 months; 12 plus 2). Additionally, parents receive a bonus of EUR 1,000 if the period of transfer payments is split at least at a ratio of 40:60 between parents.

The child tax credit (EUR 97.8 per month, see section on Tax Credits) is paid together with the family allowance and therefore treated as a transfer.

There is a supplement to the family allowance of EUR 23.3 per month for the third and every additional child if the family's taxable income (i.e. the sum of the tax base for the progressive income tax schedule) in the preceding year did not exceed EUR 55,000. This supplement is paid on application after a tax assessment of the very year.

An additional family allowance (“13th family allowance”) of EUR 116.1 is given for children in the age between 6 and 15 years every September.

Since 2023, a special transfer is granted to single earners or parents with low income. The income threshold is EUR 23,300 for 2023 and EUR 24,500 for 2024. This special grant amounts to EUR 60 per month and child.

### ***Other cash transfers***

With the eco-social tax reform 2021 a national emissions certificate trading scheme covering non-ETS sectors has been introduced. The system comprises a regional climate bonus to compensate for the resulting additional burden on households. For 2024, every Austrian resident (primary residency for at least 6 months in the calendar year) is entitled to a direct payment consisting of a lump sum transfer of 145 EUR and a regionally differentiated amount. Children up to the age of 18 years receive half the amount. An innovation in 2024 is that the climate bonus is taxed for annual income above EUR 66,612.

The regionally differentiated compensation is based on the municipality of residence. The amount varies depending on the infrastructure (such as schools or shopping facilities) and public transport connections. Four categories are defined. The regional compensation amounts to 0, 50, 100 or 145 EUR. Therefore, the total “climate bonus” paid lies between 145 and 290 EUR.

For the Taxing Wages model a weighted average is calculated. The specific category of climate bonus is known for each municipality. Weights are based on the population in the municipality at the beginning of 2024. An average climate bonus of EUR 230 per adult and EUR 115 per child are derived for 2024.

## **Main Changes in Tax/Benefit Systems Since 2004**

In 2004, the first step of a comprehensive tax reform came into force. The general tax credit was increased from EUR 887 to EUR 1 264 and the phasing-out rules were considerably simplified and harmonized for all groups of taxpayers.

The tax reform in 2005 brought a new income tax schedule. Apart from the top rate of 50% for incomes exceeding EUR 51 000, it shows the average tax rate for two amounts of income. The tax amounts for incomes between these values have to be calculated by linear interpolation. The formulas that have to be applied are defined in the tax law. The tax reform included some measures which were made retrospective for 2004. These measures are an increase of the sole earner and the single parent tax credit depending on the number of children (together with a higher income limit for the spouse of a single earner) and an increase of traffic reliefs by about 15%. The maximum deductible amount for church contributions was increased as well. In 2006, the traffic reliefs were raised again by about 10%.

In 2007, the traffic allowance was increased by 10% (effective from 1st July). Additionally, the maximum negative tax for employees with traffic allowances was raised from EUR 110 to EUR 240 (for 2008 and 2009). In 2008, the family allowance for the third child and all subsequent children was increased. Furthermore, the unemployment insurance contribution of low-earning employees was reduced (effective from 1st July). Also in 2008, for monthly earnings up to EUR 1 100 the rate was set to zero, for earnings below EUR 1 200 the contribution was set to 1%, below EUR 1 350 2% and above it was set to the current rate of 3%. Since 2008, these income limits have been raised according to the increase of the ceiling levels of social security contributions every year.

In September 2008, the parliament decided some measures to compensate for the strong increase of food and energy prices: inter alia, the tax exemption of overtime supplements was increased and the 13th child allowance was introduced.

The tax reform 2009 (effective from the 1st of January) brought an increase of the zero bracket (from EUR 10 000 to EUR 11 000), a reduction of the marginal income tax rates (except the top rate), an upward shift of the top rate bracket (from EUR 51 000 to EUR 60 000) and several measures for families with children: child allowance (EUR 220 or EUR 132 each parent p.a.), deductibility of cost for child care (up to EUR 2 300 p.a. per child), tax-free payments (up to EUR 500 p.a.) from employers to their employees for child care and an increase of the child tax credit.

Starting in 2013 a progressive rate schedule is applied to Christmas and leave bonus instead of a flat rate regime of 6% (see 1.1.3.)

The tax reform 2016 decreased all marginal tax rates significantly, notably the marginal tax rate of the first tax bracket, which was reduced by 11.5 percentage points from 36.5% to 25%. Limited to the years 2016 to 2020 the top marginal tax rate is temporarily increased by 5% points to 55%. These 55% apply to those parts of income exceeding EUR 1 million a year.

The tax credit for employees was increased from EUR 345 to EUR 400. The non-wastable tax credit (reimbursement of social security contributions) for low earnings was extended. For employees the non-wastable tax credit was increased to a maximum of 50% of social security contributions up to a ceiling of EUR 400 a year. For commuters eligible for the commuter tax allowance the maximum amount of the non-wastable tax credit is EUR 500. This system of a non-wastable tax credit was extended to pensioners too, limited to EUR 110.

Besides the already existing broad financial support for families (payable tax credit and transfers as well as deductibility of cost for child care) the tax reform 2016 increased the tax allowance for children from EUR 220 to EUR 440 per child. If both parents claim for this tax allowance, it increases to EUR 600 (two times EUR 300).

Tax expenditures (tax allowances) for private insurances (e.g. health and pension insurances) and mortgages were abolished for new contracts beginning with 2016. For existing contracts these tax allowances are maintained for a transitional period of five years.

In 2019 a non-payable family tax credit of EUR 1 500 each child (EUR 500 if the child is older than 18 years) was introduced. The parents can split up the tax credit one half each. Sole- or single-earner with low income, who cannot fully participate on that non-payable family tax credit, can apply for a payable sole- or single-earner family tax credit up to EUR 250 each child.

In 2020 the positive entrance rate of the tax rate schedule was reduced to 20% and the refund of social security contributions for low earners was increased.

From 2021 on, the standard tax allowance for special expenses of EUR 60 was abolished.

From 2022 on, the supplement to the traffic tax credit is raised from EUR 400 to EUR 650. In case of a negative income tax liability, the refund is capped at 55% of overall social security contributions paid or a maximum of EUR 550.

The non-payable family tax credit is increased to EUR 2000 for each child (EUR 650 if the child is older than 18 years). From now on the maximum amount payable by child via the so-called 'Kindermehrbetrag' is EUR 550. Also the definition of eligible recipients has been expanded and is not limited anymore to qualifiers for sole- or single earner tax credits.

Several new (one-time) tax credits and cash transfers have been introduced for 2022:

- An inflation tax credit of EUR 500 that is faded out uniformly to zero for current income between EUR 18,200 and EUR 24,500. In case of a negative income tax liability, the refund for 2022 is limited to 70% of overall social security contributions paid (max. refundable amount: EUR 1,550).
- The 'climate bonus': direct, tax-free lump-sum payment of EUR 250 per person. Children up to the age of 18 years receive half the amount. The stated amount applies only for 2022.

- A one-time supplement to the climate bonus (the anti-inflation bonus). Payment of EUR 250 that is tax-exempt up to a yearly taxable income of EUR 90,000. Again, for children only EUR 125 are paid.
- An energy cost credit worth EUR 150 (only for households with adjusted gross annual income of EUR 55,000 (single household) or EUR 110,000 (multiple earners)). This cash transfer is a one-time measure to counteract risen energy prices.
- An additional family allowance of EUR 180 is given in August 2022.

For the period May 2022 through June 2023, increased amounts are granted for the traffic relief and the additional traffic tax credit in case of entitlement to traffic relief.

From 2023, the 'climate bonus' consists of a lump sum of EUR 110 and a regionally differentiated amount between 0 and 100% of the lump sum. Children up to the age of 18 years are eligible for half of the amount.

From 2023 onwards, a yearly indexation mechanism for personal income tax and social transfers is in force. Two independent economic research institutes calculate the impact of inflation on PIT revenues. Based on the results, PIT tax bracket thresholds and tax credits are adjusted to neutralise this impact. Two-thirds of the estimated impact of inflation on PIT revenues will be compensated automatically by adjusting thresholds and tax credits. The remaining third of the calculated impact volume is redistributed to compensate recipients of income by discretionary measures. The adjustment is based on the consumer price index. The average of the monthly inflation rates between second half-year in year t-2 and first half-year in year t-1 are used to adjust the parameters in year t.

From 2023 on, a special grant of 60 EUR per month per child is automatically paid to single parents and single earners with low income.

## Memorandum Items

### *Calculation of Earnings Data*

- Sector used: All private employees except apprentices employed full-time for the whole year
- Geographical coverage: Whole country
- Sex: Male and Female
- Earnings base:
  - Items excluded:
    - Unemployment compensation
    - Sickness compensation
  - Items included:
    - Vacation payments
    - Overtime payments
    - Recurring cash payments
    - Fringe benefits (taxable value)
- Basic method of calculation used: Average annual earnings
- Income tax year ends: 31 December

Period to which the earnings calculation refers to: one year.

Upper income limit for special grant	grant_ul	24,500	

## 2024 Tax equations

The equations for the Austrian system are, in principle, on an individual basis. The only variable which is dependent on the marital status is the head of family (sole earner) tax credit, which is also given to single parents. For the Christmas and leave bonus (both amounting to one monthly wage or salary) there are special rules for the calculation of social security contributions (separate ceilings and slightly lower rate) and wage tax (reduced flat rate). The income tax schedule and the tax credits are applied only for "current pays". The child tax credit is in principle given to the mother (as a negative tax together with "family allowances" = transfer for children). The sole earner and the employee tax credit are connected with negative income tax rules. Therefore, the tax finally paid may be different from tax liability minus tax credits.

Bn	Variable	code for docn equations	Excel-Function
3	earnings (%AW)	percent	0, 67%, 1 or 167% in Taxing Wages output tables (but model can be applied to all earnings levels)

	Wage cost		=earn+SSCf+payroll

Unemp is a Visual Basic Function which chooses lower unemployment SSC rates for low earnings.

Key to range of equation B calculated separately for both principal earner and spouse P calculated for principal only (value taken as 0 for spouse calculation) J calculated once only on a joint basis.

# Belgium

---

This chapter includes data on the income taxes paid by workers, their social security contributions, the family benefits they receive in the form of cash transfers as well as the social security contributions and payroll taxes paid by their employers. Results reported include the marginal and average tax burden for eight different family types.

Methodological information is available for personal income tax systems, compulsory social security contributions to schemes operated within the government sector, universal cash transfers as well as recent changes in the tax/benefit system. The methodology also includes the parameter values and tax equations underlying the data.

---

The national currency is the Euro (EUR). In 2024, EUR 0.92 was equal to USD 1. The Secretariat has estimated that in that same year the average worker earned EUR 60 841 (Secretariat's estimate).

## Personal income tax system

### Federal government income tax

#### *Tax unit*

Spouses are taxed separately. As from 2004, the principle of separate taxation applies to all categories of income. A non-earning spouse is taxed separately on a notional share of income that can be transferred to him or her (see “non-earning spouse allowance”, below). Married couples nonetheless file joint income tax returns.

#### **Schedule**

Taxable income (EUR)	Marginal rate (%)
0—15 820	25
15 820—27 920	40
27 920—48 320	45
48 320—and above	50

#### *Tax allowances*

#### **Deduction of social security contributions**

Unless stated otherwise, social insurance contributions are deductible from gross income.

#### **Work-related expenses**

Salaried employees are entitled to a standard deduction for work-related expenses; this is equal to 30% of gross income (less social insurance contributions) and may not exceed EUR 5 750 per spouse.

For self-employed professionals:

Self-employed professionals are entitled to a standard deduction for work-related expenses. This deduction may under no circumstances exceed EUR 5 050 per spouse.

Gross earnings less social insurance contributions (EUR)	Rate (%)
Below 7 310	28.70
Between 7 310 and 14 520	10
Between 14 520 and 24 160	5
Above 24 160	3

Paid company directors are also entitled to a standard deduction for work-related expenses; this is equal to 3% of gross income (less social insurance contributions) and may not exceed EUR 3 030 per spouse.

An additional allowance may be granted to wage-earners if their workplace is more than a certain distance from their home.

Actual expenses incurred in order to acquire or retain earned income are deductible if they exceed the standard deduction. The deductibility of certain categories of work-related expenses (cars, clothing, restaurant meals and business gifts) is limited, however. Taxpayers who report actual expenses may

deduct EUR 0.27 per kilometre, up to 100 km per single journey, for travel between their home and their workplace by means other than private car.

### **Non-earning spouse allowance (quotient conjugal)**

A notional amount of income can be transferred between spouses if one of them earns no more than 30% of the couple's combined earned income. In this case, the amount transferred is limited to 30% of aggregate net earned income, less the individual income of the spouse to whom the notional share is transferred. This allowance is limited to EUR 13 050.

### **Exempt income**

The base amount is: 10 570. These amounts vary with regards to the family situation. Additional exemptions for dependent children (a handicapped child counts as two children):

- 1 child: 1 920
- 2 children: 4 950
- 3 children: 11 090
- 4 children: 17 940
- > 4 children: 6 850 per additional child

Dependent child exemptions in excess of available income give rise to a reimbursable tax credit. This reimbursable tax credit is calculated at the marginal rate for the spouse with the highest income and capped at EUR 550 per dependent child.

Additional special exemptions are also granted for certain household members (in euro):

- Other dependants: 1 920
- Handicapped / handicapped spouse: 1 920
- Other handicapped dependants: 1 920
- Widow(er) with dependent child(ren): 1 920
- Single father or mother: 1 920

These additional exemptions are applied first to the taxable income of the spouse having the most income, with any remainder then being applied to the income of the other spouse.

The basic exemption plus any additional exemptions for dependants and single parents is applied against each bracket from the bottom up; in other words, the lowest brackets are depleted first.

### **Schedule**

Basic exemption plus any additional exemption (EUR)	Marginal rate (%)
0—11 120	25
11 120—15 820	30
15 820—26 360	40
26 360—48 320	45
48 320—and above	50

The basic exemption plus any additional exemptions is applied from the bottom up.

## ***Regional and local government taxes***

With the implementation of the sixth state reform, the Flemish Region, the Walloon Region and the Brussels-Capital Region have been delegated several important competences with regard to the individual income tax. As a result of this reform, as from 1 July 2014, the regional competences are:

- the possibility to levy surcharges on the federal PIT (the supplementary regional tax on the personal income tax). The surcharge may be proportional or vary with income but there are limits to ensure that the tax remains progressive);
- to grant (on the result of the surcharges) tax discounts;
- to grant tax reductions, tax increases and tax credits;
- to regulate exclusively some tax reductions.

Under the new tax model, the assumed federal income tax amount must first be calculated. The taxable base is reduced by the exempt income (see section on Exempt income), the tax credits for pensions, unemployment, sickness and other social benefits and the tax credit for income taxed abroad. Additionally, it is reduced by the tax due on passive income for which the Federal State remains exclusively competent.

The remaining PIT liability is then split between the federal government and Regions according to a ratio of 24.957% for the regional PIT and 75.043% for the Federal PIT. Expressed as % of the federal PIT, the basic rate of the regional surcharge equals 33.257%. ( $0.24957/(1-0.24957)$ ). Regions may change the rate of the surcharge. This surcharge may vary per tax bracket, within certain limits

The modelling relies on the parameters that apply in the Brussels-capital Region. The actual regional rate is set at 32.591% (Brussels-Capital rate).

The starting point for the calculation of the municipal (and agglomeration) surcharges is the individual income tax ("impôt total", i.e. the sum of federal PIT and regional PIT), before taking into account the surcharge resulting from insufficient prepayments, the foreign tax credit, federal and regional reimbursable tax credits (among others for children and for low-income workers), advanced payments and withholding taxes. The rate of this local surtax is set by each municipality, and there is no upper limit

The calculation of the regional and local surtax for the average worker study assumes that the worker lives in the Region of Brussels-Capital. The weighted average local surtax of the 19 municipalities which form the Brussels-Capital Region is 6.3%. The additional surcharge of 1% levied in the Brussels-Capital Region, in addition to the municipal surcharge, is abolished as from income year 2016.

## ***Tax credits***

### **Refundable tax credit for low-income workers**

A refundable tax credit is intended for low-income workers and company managers (subject to the employees' social security system) entitled to the employment bonus.

The refundable tax credit amounts to 33.14% as of 1<sup>st</sup> January 2020 of the "employment bonus" which is actually granted on remunerations earned during the taxable period. It cannot exceed EUR 1 380 per taxable period.

## Compulsory social security contributions to schemes operated within the government sector

### Rates and ceiling

#### a) Payroll deductions

The rates of employer and employee contributions are set by law. The applicable rates (in %) are as follows (for businesses having 20 or more employees) :

2024	Employee	Employer	Total
Unemployment	0.87	3.16	4.03
Health insurance indemnities	1.15	2.35	3.5
Health care	3.55	3.8	7.35
Placement services		0.05	0.05
Family allowances		7	7
Pensions	7.50	8.86	16.36
Child care		0.05	0.05
Work-related illnesses		1.00	1.00
Work-related accidents		0.32	0.32
Education leave		0.05	0.05
Business closures		0.21	0.21
Wage restraint		5.23	5.23
Tax shift 2017		-5.04	-5.04
Total	13.07	27.04	40.11

Vacation pay is not subject to the social security contributions applicable to salaries, but a social security levy of 13.07% is deducted when the money is attributed.

#### b) Reduction of employer contributions

The schedule applicable as from 01.01.2024 is as follows:

Gross annual earnings (S) in EUR	Fixed amount	Variable amount
0-26 010.76	0	0.140 (43 190.68-S) + 0.400 (26 010.76-S)
26 010.76-43 190.68	0	0.140 (43 190.68-S)
43 190.68and up	0	0

The schedule applicable as from 01.04.2024 is as follows:

Gross annual earnings (S) in EUR	Fixed amount	Variable amount
0-27 228.72	0	0.140 (43 190.68-S) + 0.400 (27 228.72-S)
27 228.72-43 190.68	0	0.140 (43 190.68-S)
43 190.68and up	0	0

The schedule applicable as from 01.07.2024 is as follows:

Gross annual earnings (S) in EUR	Fixed amount	Variable amount
0-27 773.28	0	0.140 (44 054.58-S) + 0.400 (27 773.28-S)
27 773.28-44 054.58	0	0.140 (44 054.58-S)
44 054.58 and up	0	0

#### c) Reduction of individual social security contributions

A reduction of individual social security contributions is granted monthly for low-income earners, depending on wage level. The schedule below is restated in annual terms.

The schedule applicable as from 01.11.2023 is as follows:

Gross annual salary (S) in EUR	Reduction in Euros
0 < S < 24 648.12	3 209.04
24 648.12 < S < 31 476.00	Min (3 209.04, (3 209.04–0.2579 (S–24 648.12)))
31 476.00 < S < 37 733.40	Min (3 027.12 (3 027.12–0.2313 (S–24 648.12)))
S > 37 733.40	0

The schedule applicable as from 01.04.2024 is as follows:

Gross annual salary (S) in EUR	Reduction in Euros
0 < S < 25 089.36	3 266.52
25 089.36 < S < 32 039.52	Min (3 266.42, (3 266.42–0.2699 (S–25 089.36)))
32 039.52 < S < 36 991.92	Min (1 390.92, (1 390.92–0.2443 (S–32 039.52)))
S > 37 733.40	0

The schedule applicable as from 01.05.2024 is as follows:

Gross annual salary (S) in EUR	Reduction in Euros
0 < S < 25 591.08	3 331.80
25 591.08 < S < 32 680.32	Min (3 331.80, (3 331.80–0.2699 (S–25 591.08)))
32 680.32 < S < 36 991.92	Min (1 418.64, (1 418.64–0.2442 (S–32 680.32)))
S > 38 488.80	0

#### d) Special social security contribution

All persons totally or partially subject to the social security scheme for salaried workers are liable for this special contribution. In theory, the amount of the contribution is determined according to aggregate household income. Aggregate household income is equal to combined gross earnings less ordinary social security contributions and work-related expenses. The special social security contribution is not deductible for PIT purposes. Since 01.01.2022, two schedules are created, one for the single persons and one for couples. The amount of the contribution is as follows:

##### Single persons:

Taxable income (EUR)	Amount due on the lower limit	% above the lower limit
from 0 to 18 592.02	0	0
from 18 592.02 to 21 070.96	0	5
from 21 070.96 to 37 344.00	123.95	1.3
from 37 344.00 to 40 997.26	335.50	4.009
from 40 997.26 to 60 161.85	481.96	1.2996
60 161.85 and above	731.28	0

##### Couple :

Taxable income (EUR)	Amount due on the lower limit	% above the lower limit
from 0 to 18 592.02	0	0
from 18 592.02 to 21 070.96	0	5
from 21 070.96 to 60 161.85	123.95	1.3
from 60 161.85 to 74 688.00	623.39	0
from 74 688.00 to 81 994.00	623.39	1.3629
81 994.00 and above	731.28	0

#### e) Work accidents

All employers are required to insure their employees against accidents that occur in the workplace or while travelling to or from the workplace. The insurance is written by a private company. The premiums depend on the wage level as well as on sectoral risk indicators. A minimum (+/- 14% of AW in 2018) and maximum (89% of AW) wage applies. The usual premiums are approximately 1% of the capped gross pay for office workers and 3.3% for labourers. Higher rates apply in certain industries in which risks are greater. The premium rate for construction workers, for example, varies between 7% and 8%.

### ***Deductions according to family status or gender***

None.

## **Universal cash transfers**

With the implementation of the sixth state reform, the Flemish Region, the Walloon Region and the Brussels-Capital Region have been delegated family allowances. We only indicates the changes that have been implemented in the Brussels-capital region. Those apply from 1<sup>st</sup> January 2020

The previous system (hereafter “the old system”) is to a large extent grandfathered. For the children born before 31<sup>th</sup> December 2019, if the old family allowance system is most advantageous than the new system, the old system still applies if the composition of the family has not been changed. The comparison is made per family and not per child and only takes into account only the basic amounts and not the annual supplements.

The Taxing Wages calculations assume that one child is aged between seven and ten years and that the other child is aged between eleven and twelve years.

### ***New regional system – Brussels-Capital region***

Under the new system, family benefits consist in basic amount, age supplements, an income-related supplement and a single parent supplement.

The basic annual amount per child is set at EUR 2 179.88 (But if the child is born before 1<sup>st</sup> January 2020, the amount is reduced by EUR 145.32 until 31 December 2025).

Age supplement:

≥ 12 years	145.32
≥ 18 years and an enrolment in higher education	290.64

Number of children and income-related supplement, per child: (S = Gross income, net of deductible social security contributions)

Children under the age of 12	1 child	2 children	3 children or more
S ≤ 38 372.88	581.28	1017.28	1598.56
38 372.88 < S ≤ 54 969.69	0	363.36	1046.36
S > 54 969.69	0	0	0
Children over the age of 11	1 child	2 children	3 children or more
S ≤ 38 372.88	726.6	1162.6	1743.88
38 372.88 < S ≤ 54 969.69	0	363.36	1046.36
S > 54 969.69	0	0	0

Single parent supplement, per child:

	1 child	2 children	3 children or more
$S \leq 38\,372.88$	0	145.32	290.64
$S > 38\,372.88$	0	0	0

Annual supplement, per child

< 3 years	3 – 5 years	6 – 11 years	$\geq 12$ years
24.38	0,00	36.57	60.95
	But if pre-school education:		But if an enrolment in higher education:
	24.38		97.52

### Old system

Family allowances are granted for children. The annual amounts of these benefits (in euro) are as follows:

	<5 years	5–6 years	7–10 years	11–12 years	12–16 years	17–18 years	>18 years
1 <sup>st</sup> child	1 416.66	1 428.85	1 671.45	1 695.83	1 822.55	1 822.55	1 878.95
2 <sup>nd</sup> child	2 600.50	2 612.69	3 096.37	3 120.75	3 376.11	3 376.11	3 576.75
3 <sup>rd</sup> child	3 870.74	3 882.93	4 366.61	4 390.99	4 646.35	4 646.35	4 846.99

## Main changes in the tax/benefit system since 2016

The “tax shift” has been decided in 2015 and is shifting the taxation from labour to other bases, including mainly consumption and income from savings. The reform is phased over the 2015-2019 period. The main changes are the following

- Employers’ social security contributions will be reduced to 25%. Reductions will be abolished, apart from the reduction for low wage earners that will be gradually increased.
- On the side, the reform increases the standard deduction for work related expenses for wage earners and the zero-rate band. The tax schedule will also be modified: the 25% will be extended to the previous upper limit of the 30% bracket, so that the former 30% bracket will disappear. The tax credit for low wage earners will also be increased.

### Changes to labour taxation due to the COVID pandemic in 2020 and 2021

Although no specific covid-19 measures have a direct impact on labour taxation as modelled in the Taxing Wages publication, some have an impact on payment facilities:

- The covid-19 measures in Belgium include improved deferred social security contribution (SSC) payments plans (Amicable repayment plans). Such repayment plans already existed and are still on demand, but access is made easier and conditions smoother. In principle all companies with covid related financial problems can claim the deferral with respect to 2020 SSC-payments.
- Regarding PIT, no particular measures apply to PIT assessments of employees. However a covid measure provides for a lower rate of the earned income withholding tax (EIWT) for unemployment benefits of temporary unemployed employees. Since the PIT rate schedule itself remains unchanged, the total PIT due is not altered. But lower EIWT paid at source amounts to a partial postponement of payment.
- On top of several cases in which employers must not transmit all collected earned income withholding tax (EIWT) to the Treasury, a new covid measure supporting companies retaining

temporary unemployed employees was introduced. There already existed different types and conditions for such wage subsidies (e.g. with respect to night and shift work or for researchers).

## Memorandum Items

### *Identification of AW and valuation of earnings*

The Average Wage is based on an annual survey conducted by the Statbel division of the Ministry of Economy. The survey is limited to enterprises with at least 10 employees. A two step approach is applied: first the participating employers are selected, then the surveyed employees (sampling ratio of 5% to 7%). All employees are covered by the survey but the estimate of the Average Wage is restricted to data of full time employees only. The reference period is October but survey data is combined with social insurance registers to obtain annual earnings. If applicable, the earnings of full time employees not employed during the entire year, are uplifted proportionally to obtain annual estimates. Annual earnings include bonuses, vacation and overtime pay, but no fringe benefits.

## 2024 Tax equations

The equations for the Belgian system in 2022 are mostly calculated on an individual basis. But central government tax for a married couple is calculated on two bases and the lower value is used. One of the bases takes account of the combined income of the couple. Also, tax credits may be used against the tax liability of the secondary earner if the principal earner is unable to use them.

The functions which are used in the equations (Taper, Tax etc.) are described in the technical note about tax equations. Variable names are defined in the table of parameters above or are the standard variables "married" and "children". A reference to a variable with the affix "total" indicates the sum of the relevant variable values for the principal and spouse. And the affixes "princ" and "spouse" indicate the value for the principal and spouse respectively. Equations for a single person are as shown for the principal with "\_spouse" values taken as 0.

	Line in country table and intermediate steps	Variable name	Range	Equation
1.	Earnings	earn

	Tax prior to non-wasteable credits	CG_tax_init	B	Positive(CG_tax_incl-tax_credits) *(1-red_rate)
	Non-wasteable child credit	child_credit_nw	J	MIN(Tax(MIN((children=1)*child_cr1+(children=2)*child_cr2),' (positive(ex_inc_int-tax_inc_int), tax_sch), children*child_cr_max)
	Final CG tax	CG_tax_final	J	CG_tax_init-basic_cr_total-child_credit_nw

8.	State and local taxes			
	Regional tax	regional_tax	B	CG_tax_init*reg_tax_rate
	Local tax	local_tax	J	(local_rate+add_local_rate)*(CG_tax_init+regional_tax)
9.	Employees' soc security	SSC	B	Positive((earn)*SSC_rt-MIN(VLOOKUP(earn, SSC_redn,3), VLOOKUP(earn, SSC_redn, 3)-VLOOKUP(earn, SSC_redn, 4)*(earn- VLOOKUP(earn, SSC_redn, 2))))
		SSC_special	J	positive(Tax(tax_inc_total, IF(Married, SSC_special_couple, SSC_special_single))
		SSC_total		SSC+SSC_special
11.	Cash transfers	cash_trans	J	MAX(((Children>0)*CB_1+(Children>1)*CB_2,Children*(CB+VLOOKUP(earn-SSC,CS_Social,Children+2)+IF(Married,0,VLOOKUP(earn-SSC,CS_Single,Children+2))))
13.	Employer's soc security	empr_sch	B	Positive(earn*(SSC_empr_rt-PrP_redn)-(VLOOKUP(earn, SSC_empr_redn, 2)-VLOOKUP(earn, SSC_empr_redn, 3)*(earn-VLOOKUP(earn, SSC_empr_redn, 1))))

Key to range of equation B calculated separately for both principal earner and spouse P calculated for principal only (value taken as 0 for spouse calculation) J calculated once only on a joint basis.

# Canada

---

This chapter includes data on the income taxes paid by workers, their social security contributions, the family benefits they receive in the form of cash transfers as well as the social security contributions and payroll taxes paid by their employers. Results reported include the marginal and average tax burden for eight different family types.

Methodological information is available for personal income tax systems, compulsory social security contributions to schemes operated within the government sector, universal cash transfers as well as recent changes in the tax/benefit system. The methodology also includes the parameter values and tax equations underlying the data.

---

The national currency is the Canadian dollar (CAD). In 2024, CAD 1.37 was equal to USD 1. In that year, the average worker earned CAD 88 360 (Secretariat estimate).

## Personal Income Tax Systems

### Central/federal government income taxes

#### *Tax unit*

Under the present system, tax is levied on individuals separately; certain tax reliefs depend on family circumstances.

#### *Tax allowances and credits*

##### **Standard reliefs**

- **Basic personal amount:** Individual taxpayers can claim a non-refundable credit in respect of the Basic Personal Amount (BPA). Starting in 2020, there are two portions to the BPA, the original portion and the increased portion. On December 9, 2019, the government announced gradual increases to the BPA such that it would reach CAD 15 000 by 2023. These increases were implemented over the 2020 to 2023 period through annual increases in excess of inflation. The new, increased portion of the BPA is subject to an income test beginning at a level of individual net income equivalent to the fourth federal tax bracket threshold (CAD 173 205 in 2024) and is fully phased out by the fifth federal bracket threshold (CAD 246 752 in 2024). Individuals with net income at or exceeding the fifth bracket threshold continue to receive the BPA, but do not benefit from the supplemental increase. With this reform now fully phased in, the maximum value of the credit (no reductions) in 2024 is CAD 2 355.75, which is calculated by applying the lowest personal income tax rate (15% in 2024) to the sum of the original BPA (CAD 14 156 in 2024) and the full value of the increase (CAD 1 549 in 2024).
- **Credit for Spouse or Eligible Dependant:** A taxpayer supporting a spouse or other eligible dependant receives a tax credit, which is set equal to the BPA. The above announcement of December 9, 2019 increased the credit for Spouse or Eligible Dependant in the same way as the BPA. The increased portion of these credits is subject to the same income-test as the BPA and continues to be reduced dollar-for-dollar by the net income of the spouse or eligible dependant. The maximum value of the Credit for Spouse or Eligible Dependant is CAD 2 355.75 in 2024.
- **Social security contributions:** A 1-percentage point increase in the Canada Pension Plan (CPP) and the Quebec Pension Plan (QPP) contributions was phased-in over five years from 2019 to 2024, plus, starting in 2024, an additional 4.00% is applied to earnings over the annual base maximum amount (CAD 68 500) up to a new enhancement maximum amount of CAD 73 200. Taxpayers are entitled to claim a deduction for the enhanced portions of CPP/QPP (to a maximum amount of CAD 838.00 in 2024). (See Section on Employees' contributions/Pensions for more detail). The original base contributions to the CPP or QPP continue to be eligible for a 15% credit (to a maximum contribution of CAD 3 217.50 for the CPP and CAD 3 510.00 for the QPP). Taxpayers are also entitled to claim a 15% tax credit for their Employment Insurance (EI) premiums to a maximum contribution of CAD 1 049.12 outside Quebec; the EI premium rate is lower for Quebec residents, who also pay into the Quebec Parental Insurance Plan; the maximum combined credit for a Quebec resident is CAD 1 298.60.
- **Canada Workers Benefit<sup>1</sup> (CWB):** The CWB was enhanced in 2021 and now provides a non-wastable tax credit equal to 27% of each dollar of earned income in excess of CAD 3 000 to

a maximum credit of CAD 1 590 for single individuals without dependents and CAD 2 739 for families (couples and single parents). The credit is reduced by 15% of net family income in excess of CAD 26 149 for single individuals and CAD 29 833 for families. This is the default national design; provinces may choose to propose jurisdiction-specific changes to this design, subject to certain principles. In 2024, the secondary earner exemption allows the spouse or common-law partner with the lower working income to exclude up to CAD 15 955 of their working income in the computation of their adjusted net income, for the purpose of the CWB phase-out.

- Canada Employment Tax Credit: A tax credit of up to CAD 214.95 on employment income.

### **Main non-standard tax reliefs applicable to an average worker:**

A number of non-standard tax reliefs are available to the average worker in Canada. The main ones are:

- Medical expenses credit: Taxpayers are entitled to a 15% tax credit for an amount of eligible medical expenses that exceeds the lesser of 3% of net income or CAD 2 759.
- Charitable donations credit: The credit is 15% on the first CAD 200 of eligible charitable donations and 29% on eligible donations in excess of CAD 200, with the exception of donors with taxable income exceeding CAD 246 752, who may claim a 33% tax credit on the portion of total annual donations over CAD 200 made from taxable income greater than CAD 246 752. Eligible donations are those made to registered charities, to a maximum of 75% of net income.
- Registered pension plan contributions: Employees who are members of a registered pension plan are entitled to deduct their contributions to the plan. Employee contributions required to fund the actuarial benefit liabilities under a defined benefit registered pension plan are permitted (annual benefit accruals are limited to a maximum of 2% of earnings up to a dollar amount of CAD 3 607). Employee contributions to a defined contribution registered pension plan are limited to 18% of earned income up to a maximum of CAD 32 463.
- Registered retirement savings plan (RRSP) premiums: Individuals can deduct their contributions to an RRSP up to a limit of 18% of the previous year's earned income, to a maximum of CAD 31 560 a year, unless they are also accruing benefits under a registered pension plan or a deferred profit-sharing plan. Members of those other plans are limited to RRSP contributions of 18% of the previous year's earned income to a maximum of CAD 31 560, minus a pension adjustment amount based on pension benefits accrued in the previous year.
- Union and professional dues: Individuals with annual dues paid to a trade union or an association of public servants or paying dues required to maintain a professional status recognised by statute are allowed to deduct such fees in computing taxable income.
- Moving expenses: Eligible moving expenses are deductible from income if the taxpayer moves at least 40 kilometres closer to a new place of employment.
- Child care expenses: A portion of child care expenses is deductible if incurred for the purpose of earning business or employment income, studying or taking an occupational training course or carrying on research for which a grant is received. The lower income spouse must generally claim the deduction. The amount of the deduction is limited to the least of:
  1. the expenses incurred for the care of a child;
  2. two thirds of the taxpayer's earned income; and
  3. CAD 8 000 for each child who is under age seven, and CAD 5 000 per child between seven and sixteen years of age (or older if has a mental or physical impairment, but not eligible for the Disability Tax Credit). The amount for a child who is eligible for Disability Tax Credit is CAD 11 000.
- The Canada Carbon Rebate (CCR): The CCR is part of the federal government's carbon pollution pricing program, and more specifically part of its fuel charge program. The fuel charge is a

regulatory charge applied to fossil fuels in backstop jurisdictions, i.e. provinces or territories that decide not to price pollution or to propose a system that meets federal standards. All proceeds from the fuel charge are returned to the jurisdiction in which they are collected, and over 90% of these proceeds are returned to households through the CCR. CCR amounts are based on family composition and vary by jurisdiction, since fuel charge proceeds also vary by jurisdiction. The remainder of fuel charge proceeds from within a jurisdiction are returned to farmers, small- and medium-enterprises and Indigenous governments. The CCR is not included in the Taxing Wages estimates because:

1. The fuel charge system, and hence the CCR, is not applied in all provinces and territories, since some provinces have their own systems (BC and QC); and
2. The source amounts are derived from earmarked funds generated from another tax (not captured under Taxing Wages since the fuel charge is an indirect tax).

*Tax schedule***2021 Federal Income Tax Rates**

Taxable Income (CAD)	Rate (%)
0—55 867	15
55 867—111 733	20.5
111 733—173 205	26
173 205—246 752	29
246 752 and over	33

**State and local income taxes***General description*

All provinces and territories levy their own personal income taxes. All, with the exception of Quebec, have a tax collection agreement with the federal government, and thus use the federal definition of taxable income. They are free to determine their own tax brackets, rates and credits. Quebec collects its own personal income tax and is free to determine all of the tax parameters, including taxable income. In practice, its definition of taxable income is broadly similar to the federal definition.

*Tax regime selected for this study*

The calculation of provincial tax for the average worker study assumes the worker lives in Ontario, the most populous of the 10 provinces and 3 territories. The main features of the Ontario tax system relevant to this report are summarised below:

*Tax Schedule*

Income Bracket (CAD)	Rate (%)
0—51 446	5.05
51 446—102 894	9.15
102 894—150 000	11.16
150 000—220 000	12.16
Over 220 000	13.16

*Surtax*

Provincial tax after accounting for wastable credits	Surtax Rate
Amounts Exceeding CAD 5 554	20% of the excess amount
Amounts Exceeding CAD 7 108	36% of the excess amount

*Wastable tax credits*

- A basic tax credit of CAD 626.15.
- A maximum credit of CAD 531.66 for a dependant spouse or eligible dependant that is withdrawn as the income of the spouse or eligible dependant exceeds CAD 1 053 and is completely withdrawn when the income of the spouse is at least CAD 11 581.
- 5.05% of contributions made to the Canada Pension Plan and of Employment Insurance premiums.
- A maximum credit<sup>2</sup> of the lower of CAD 875 or 5.05% of earned income per filer with earned income that is reduced by 5% of the greater of:
  - Adjusted individual net income over CAD 32 500

- Adjusted family net income over CAD 65 000.

### *Tax Reduction*

An earner is entitled to claim a tax reduction where the initial entitlement is equal to CAD 286 plus CAD 529 for each dependent child under the age of 19. Where someone has a spouse, only the spouse with the higher net income can claim the dependent child tax reduction. If this amount is greater or equal to the liable provincial tax, then no tax is due. If the amount is less than the liable tax, then the actual tax reduction is equal to twice the initial entitlement amount less the liable tax (if this calculation is zero or negative, the reduction is equal to zero).

## **Compulsory Social Security Contributions to Schemes Operated Within the Government Sector**

### ***Employees' contributions***

#### *Pensions*

Generally, all employees are eligible for coverage under the CPP or QPP. As part of the CPP and QPP enhancements announced in 2016 and 2017 respectively, a 1-percentage point increase in employee and employer contributions was phased-in over five years from 2019 to 2024. Starting in 2024, an additional 4.00% is applied to earnings over the annual base maximum amount (CAD 68 500) up to a new enhancement maximum amount of CAD 73 200. All employee contributions above the base amount (i.e. with respect to the enhanced portion of the CPP and QPP) can be claimed as a deduction for federal tax purposes (a deduction for employee contributions to the enhanced portion of the CPP and QPP will also be claimed for Quebec income tax purposes) to a maximum of CAD 838.00 for a total maximum contribution of CAD 4 055.50 (CAD 4 348.00 in Quebec). Employee contributions with respect to the base portion of the CPP at a rate of 4.95% of income (5.40% for the QPP) will continue to be claimed as a wastable tax credit at the rate of 15% (to a maximum contribution of CAD 3 217.50 and CAD 3 510.00 for the CPP and QPP respectively). Income subject to contributions is earnings (wages and salaries) less a CAD 3 500 basic exemption. The maximum contribution of CAD 4 055.50 is reached at an earnings level of CAD 73 200 (i.e.  $(\text{CAD } 68\,500 - \text{CAD } 3\,500) \times 5.95\% + (73\,200 - 68\,500) \times 4.00\% = \text{CAD } 4\,055.50$ ). Employers are also required to contribute to the CPP or QPP on behalf of their employees at the same rate and can deduct their contributions from taxable income (refer to Section on Employers' contributions/Pensions).

Self-employed persons must also contribute to the CPP or QPP on their own behalf. However, the self-employed are required to contribute at the combined employer/employee rate on their earnings. Self-employed individuals will continue to pay both the employee and employer portion at a rate of 11.9% and 12.8% per cent respectively after the phase-in of increased contributions under the enhanced CPP and QPP, plus the additional 4.00% over the annual base amount (CAD 68 500) up to a new enhancement maximum amount of CAD 73 200. Self-employed individuals will continue to claim a wastable tax credit at the rate of 15% on the employee share of contributions to the base portion of the CPP and QPP (same as employees). For the remaining amounts, the entire enhanced portion and the employer portion, self-employed individuals will claim a maximum deduction of CAD 4 893.50 (CAD 5 186.00 in Quebec).

#### *Sickness*

There is no national sickness benefit plan administered by the federal government. However, all provinces have provincially administered health care insurance plans. Three provinces, Quebec, Ontario, and British Columbia, levy health premiums on individuals separately from the personal income tax to help finance their health programmes.

In the case of Ontario, the premium is determined based on taxable income. Individuals who earn up to CAD 20 000 are exempt. The premium is phased-in with a number of different rates to a maximum of CAD 900 for taxable income levels greater than CAD 200 600. The following table provides further details on the structure that is applicable in 2024.

The Ontario Health Premium		
Taxable Income	Fixed Component (CAD)	Variable Component
0—CAD 20 000	0	
CAD 20 000—CAD 25 000	0	6% of the taxable income in excess of CAD 20 000
CAD 25 000—CAD 36 000	300	
CAD 36 000—CAD 38 500	300	6% of the taxable income in excess of CAD 36 000
CAD 38 500—CAD 48 000	450	
CAD 48 000—CAD 48 600	450	25% of the taxable income in excess of CAD 48 000
CAD 48 600—CAD 72 000	600	
CAD 72 000—CAD 72 600	600	25% of the amount of taxable income in excess of CAD 72 600
CAD 72 600—CAD 200 000	750	
CAD 200 000—CAD 200 600	750	25% of the amount of taxable income in excess of CAD 200 000
Over CAD 200 600	900	

### *Unemployment*

In general, all employees are eligible for Employment Insurance (EI). Eligibility to receive benefits is determined by insurable hours worked (with a minimum entry threshold of 420 to 700 hours, depending on region and the unemployment rate at the time the claim for benefits starts). For 2024, employees outside Quebec are required to contribute at the rate of 1.66% of insurable earnings. Insurable earnings are earnings (wages and salaries) up to a maximum of CAD 63 200 per year. The maximum employee contribution is therefore CAD 1 049.12 per year. EI contributions give rise to a tax credit equal to 15% of the amount contributed. Employers are also required to contribute to the plan. (See the Section Employer's contributions/Pensions)

Quebec residents contribute to EI at a rate of 1.27%; the same earnings ceiling applies. They also contribute to the Quebec Parental Insurance Plan at a rate of 0.494% of insurable earnings; maximum insurance earnings for 2024 are CAD 91 000. For a Quebec resident, the maximum employee contribution (EI plus Quebec Parental Insurance Plan) is CAD 1 230.59.

### *Work injury*

See the Section on Employers' contributions/Work injury.

## **Employers' contributions**

### *Pensions*

Employers are required to contribute to the CPP on behalf of their employees an amount equal to their employees' contributions. Thus, employers also contribute at the rate of 5.95% on earnings up to CAD 68 500 (less the CAD 3 500 earnings exemption) and 4.00% on earnings between CAD 68 500 and CAD 73 200 to a maximum of CAD 4 055.50. For the QPP, the contribution rate is 6.40% of earnings, to a maximum of CAD 4 348.00.<sup>3</sup>

### *Sickness*

There is no national sickness benefit plan administered by the federal government. However, all provinces have provincially administered health care insurance plans. Three provinces levy a special tax on

employer payrolls to finance health services (Québec and Ontario) or health services and education (Manitoba). These payroll taxes are deductible from the employer's income subject to tax. In the case of the province of Ontario, employers pay an Employer Health Tax on the value of their payroll, tax rates varying from 0.98% on Ontario payroll less than CAD 200 000, up to 1.95% for payroll that exceeds CAD 400 000. Certain employers are eligible for a higher exemption of CAD 1 000 000.

### *Unemployment*

Employers are required to contribute to the employment insurance scheme. The general employer contribution is 1.4 times the employee contribution, that is, 2.32% of insurable earnings (outside Quebec). Premiums are adjusted for employers who provide sick pay superior to payments provided under the employment insurance regime. All employment insurance contributions are deductible from the employer's income subject to tax.

### *Work injury*

There is no national work injury benefit plan administered by the federal government. However, employers are required to contribute to a provincial workers' compensation plan which pays benefits to workers (or their families in case of death) for work related illness or injury. The employer contribution rates, which vary by industry and province, are related to industry experience of work-related illness and injury. Premiums are deductible from the employer's income subject to tax. In the case of Ontario, employers broadly corresponding to industry Sectors B-N inclusive pay, on average, 1.28% of the wages paid to each employee to a maximum of CAD 112 500.

## **Universal Cash Transfers**

### ***Transfers related to marital status***

None.

### ***Transfers for dependent children***

#### *Federal*

Children's benefits are provided through the Canada Child Benefit (CCB). In the autumn of 2017, the Government announced that the CCB amounts and income thresholds will be indexed to inflation starting with payments in July 2018. Entitlement to the CCB for the July 2025 to June 2026 benefit year is based on 2024 adjusted family net income. The CCB provides a maximum benefit of CAD 7 997 per child under age six and CAD 6 748 per child for those aged six through seventeen. On the portion of adjusted family net income between CAD 37 487 and CAD 81 222, the benefit is phased out at a rate of 7% for a one-child family, 13.5% for a two-child family, 19% for a three-child family and 23% for larger families. Where adjusted family net income exceeds CAD 81 222, remaining benefits are phased out at rates of 3.2% for a one-child family, 5.7% for a two-child family, 8% for a three-child family and 9.5% for larger families, on the portion of income above CAD 81 222. The Goods and Services Tax Credit provides a relief of CAD 349 for each adult 19 years of age or older and CAD 184 for each dependent child under the age of 19. Single tax filers without children and with an employment income higher than CAD 11 337 receive an additional CAD 184 that is phased in at a rate of 2%. Single tax filers with children receive an additional CAD 184 that is not subject to phase-in. The credit received for the first dependent child of a single parent is also increased from CAD 184 to CAD 349. The total amount is reduced at a rate of 5% of net family income over CAD 45 521. The amount is paid directly to families.<sup>4</sup>

*Provincial*

For each child under eighteen, qualifying families can receive up to CAD 1 725 from the Ontario Child Benefit. The benefit is withdrawn at a rate of 8% of family income that exceeds CAD 26 338.

Ontario has a Sales Tax Credit that provides a relief of up to CAD 370 for each adult and each child. It is reduced by 4% of adjusted family net income over CAD 28 478 for single people and over CAD 35 597 for families. The amount is paid directly to families.

## **Main changes in the Tax/Benefit system since 2009**

### ***Identification of an Average Worker***

The earnings data refer to full-time full-year production workers in the industries C to K (in ISIC Rev. 3.1).  
5

### ***Employer contributions to private health and pension schemes***

These do exist but no information is available on the amounts involved.

## 2024 Tax equations

The equations for the Canadian system are mostly repeated for each individual of a married couple. But the spouse credit is relevant only to the calculation for the principal earner and the non-wastable credits are calculated only once. This is shown by the Range indicator in the table below.

The functions which are used in the equations (Taper, MIN, Tax etc) are described in the technical note about tax equations. Variable names are defined in the table of parameters above, within the equations table, or are the standard variables “married” and “children”. A reference to a variable with the affix “\_total” indicates the sum of the relevant variable values for the principal and spouse. And the affixes “\_princ” and “\_spouse” indicate the value for the principal and spouse, respectively. Equations for a single person are as shown for the principal, with “\_spouse” values taken as 0.

	Line in country table and intermediate steps	Variable name	Range	Equation

	Total Employer's soc security	SSC_empr	B	CPP_empr+Unemp_empr+Health_empr+Comp_empr

Key to range of equation B calculated separately for both principal earner and spouse P calculated for principal only (value taken as 0 for spouse calculation) J calculated once only on a joint basis.

## Notes

<sup>1</sup> The Canada Workers Benefit (CWB) represents a rebranding and enhancement to the previous Working Income Tax Benefit (WITB) effective for the 2019 tax year. In 2021, it was again enhanced with increases to the phase-in rate from 26 per cent to 27 per cent, the phase-out thresholds from CAD 13 194 to CAD 22 944 for single individuals without dependants and from CAD 17 522 to CAD 26 177 for families, and the phase-out rate from 12 per cent to 15 per cent. In addition, a secondary earner exemption was added to allow the spouse or common-law partner with the lower working income to exclude up to CAD14,000 of their working income in the computation of their adjusted net income, for the purpose of the CWB phase-out.

<sup>2</sup> Ontario implemented a new low-income credit in 2019 named the Low-income Individuals and Families Tax (LIFT) credit.

<sup>3</sup> Contributions rates continue to gradually increase until the 2023 tax year as the 1-percentage-point increase is phased-in as part of the enhancements to CPP and QPP.

<sup>4</sup> The payments that relate to income from the 2024 tax year and shown in the 2024 model are payable between July 2024 and June 2025. The amounts shown in this Report assume indexation of 4.7% for the 2024 tax year (and 2025-26 benefit year); the actual indexation parameter will be announced in December 2024.

<sup>5</sup> The average wage is provided by Statistics Canada based on Survey of Labour & Income Dynamics and Canadian Income Survey.

# Chile

---

This chapter includes data on the income taxes paid by workers, their social security contributions, the family benefits they receive in the form of cash transfers as well as the social security contributions and payroll taxes paid by their employers. Results reported include the marginal and average tax burden for eight different family types.

Methodological information is available for personal income tax systems, compulsory social security contributions to schemes operated within the government sector, universal cash transfers as well as recent changes in the tax/benefit system. The methodology also includes the parameter values and tax equations underlying the data.

Chile's national currency is the peso (CLP). For 2024, the average exchange rate was CLP 943.57 to USD 1<sup>1</sup>. That same year, the average worker in Chile earned CLP 14 074 320 (country estimate<sup>2</sup>).

Taxes allowances and tax thresholds for the personal income tax system and upper earnings limits for social security contributions are determined using and expressed in CPI-indexed units. As of June 18, 2023, the following are the provisional<sup>3</sup> yearly currency values applied to these units:

Major revenue items	Unit	CLP	USD
Social security contributions	Unidad de Fomento <sup>1, 2</sup> (UF)	37 665,46	40.05
Monthly tax thresholds	Unidad Tributaria Mensual <sup>1</sup> (UTM)	65 967	70.14
Annual tax thresholds	Unidad Tributaria Anual <sup>1</sup> (UTA)	791 604	841.69

1. These amounts are subject to adjustments in line with the CPI and is compared with monthly earnings in the assessment of social security contributions

2. Average end of month value

## Personal income tax system

### Central/federal government income taxes

#### *Tax unit*

Each family member declares and pays taxes separately.

#### *Tax allowances and credits*

##### **Standard tax reliefs**

- Education tax credit: Parents with children attending preschool, primary, special or secondary education, with a total annual taxable income (both parents) of up to CLP 30 574 292 (UF 792), are entitled to a tax credit of CLP 169 857 (UF 4.4) per child, for expenses related to education. Children shall have a minimal school attendance of 85% and the school must be recognized by the State. This tax credit can be claimed by both parents, or only by one of them.
- Relief for social security contributions: Employee's compulsory social insurance contributions are deductible for income tax purposes regardless of whether they are paid to government or private health insurers. (See section on employees' contributions below).

##### **Main non-standard tax reliefs**

- Voluntary contributions and APV (Voluntary Pension Fund Savings): Voluntary contributions to pension funds and voluntary pension savings fund (APV) may be deducted from taxable income, with an annual upper limit of CLP 23 162 342 (UF 600).
- Mortgage Interest: Taxpayers whose annual income falls below CLP 71 244 360 (UTA 90) may deduct from their taxable income 100% of interest paid within a year for mortgage loans. This percentage is reduced in the case of taxpayers with higher incomes up to CLP 118 740 600 (UTA 150). This relief cannot be granted along-side the DFL2 Housing Mortgage Loan Payments benefit and cannot exceed CLP 6 332 832 (UTA 8) per annum.

#### *Tax schedule*

Tax rates are applied on monthly income and these taxes are retained and paid by employers. In order to estimate taxes, tax rates are applied on an annual basis, on the annual average income (starting of

1 January 2021, the maximum marginal tax rate was raised from 35% to 40%, and the number of tax brackets was augmented from seven to eight):

Taxable income (UTA)	Taxable income (CLP thousands)	Tax rates
0 -13.5	0 – 10 687	EXEMPT
13.5 - 30	10 687 – 23 748	4.0%
30 - 50	23 748– 39 580	8.0%
50 - 70	39 580 – 55 412	13.5%
70 - 90	55 412 – 71 244	23.0%
90 - 120	71 244 – 94 992	30.4%
120 - 310	94 992 – 245 397	35.0%
310 and over	245 397 -	40.0%

As of 1 January 2017, the President of the Republic, Ministers, Undersecretaries, Senators and Deputies have tax thresholds and rates applicable specifically to their income, if it is higher than 150 UTA:

Taxable income (UTA)	Taxable income (CLP thousands)	Tax rates
0–13.5	0 – 10 687	exempt
13.5–30	10 687 – 23 748	4%
30–50	23 748– 39 580	8%
50–70	39 580 – 55 412	13.5%
70–90	55 412 – 71 244	23%
90–120	71 244 – 94 992	30.4%
120 – 150	94 992 – 118 741	35%
150 and over	118 741 -	40%

### **State and local income taxes**

No taxes apply to income at state or local government level.

## **Compulsory social security contributions to schemes operated within the government sector**

### **Employees' contributions**

Employees have mandatorily to contribute 7% of their income to a health insurance plan subject to an upper earnings limit of CLP 38 102 379 (UF 1011.6). They are free to choose whether to pay into a government-managed plan or alternatively to a private insurer<sup>4</sup> (Isapres). The public insurance is based on a joint system that, in general, operates on an equal basis for all its beneficiaries, irrespective of the risk and the amount of the individual contribution. Its financing is partly covered by the contributions and partly by way of a government subsidy. Premiums paid to the plans offered by Isapres are based on the contributors' individual risk and these plans are exclusively financed with the employees' contributions. Public insurance contributions are included in the modelling as the majority of employees pay into plans managed by the government sector.

Employee social security contributions in respect of pensions and unemployment are not classified as taxes in this report; though they are included in modelling as deductions for income tax.

- The mandatory contributions to pension funds and unemployment insurance plans are not classified as taxes, since the payments are made to private institutions. In 1980, the public social security system was replaced with a privately managed individual capitalisation system. This system is obligatory to all employees who have joined the labour force since 1983 and free-lance workers since 2012, and of a voluntary nature to all contributing to the former system. The

contributions to the old government operated pension fund system are not included in the modelling because they relate to a minority of employees and the system will eventually disappear once the contributions and related benefit payments to those individuals remaining in it have ceased.

- The modelling allows that the contributions to pension funds and unemployment insurance managed by private institutions are deducted from gross income. In the case of their pension funds, these payments amount to 10% of their gross income, with an upper earnings limit of CLP 38 102 379 (UF 1011.6). Added to that there is an amount that varies depending on the managing company that covers the management of each pension fund account.<sup>5</sup> The monthly unemployment insurance premium is 0.6% of the employee's gross income, with an upper earnings limit of CLP 57 221 372 (UF 1 519.2). Employees do not pay the monthly unemployment insurance premium when they have a fixed-term contract or after 11 years of labour relationship.
- There are also mandatory contributions to managed funds by members of the police force and the army which are classified as taxes but are not included in the modelling as they relate to a minority of the overall workforce.
- If the employee has a high risk job, that person has to make an additional contribution of 2% (heavy work) or 1% (less heavy work) of the gross income with an upper earnings limit of CLP 38 102 379 (UF 1011.6) to the pension fund account.

The pension and unemployment contributions are not included in the Taxing Wages calculations, as they are not considered as taxes in the report. However, information on "non-tax compulsory payments" as well as "compulsory payment indicators" is included in the OECD Tax Database, which is accessible at [www.oecd.org/ctp/tax-database.htm](http://www.oecd.org/ctp/tax-database.htm).

### ***Employers' contributions***

There are five categories of employer social security contribution, none of which are classified as tax revenues in this report.

- Employers make mandatory payments of 0.90% of their employees' gross income for an occupational accident and disease insurance policy subject to an upper earnings limit. For the majority of employees, the payments are made to employers' associations of labour security which are private non-profit institutions. Those remaining are made to the Social Security Regularisation Unit (ISL). Although this latter organisation is controlled by the government, the funds are invested on the private institutions market. The employers also pay an additional contribution which depends on the activity and risk associated to the enterprise (it cannot exceed 3.4% of the employees' gross earnings). This additional contribution could be reduced, down to 0%, depending on the safety measures the employer implements in the enterprise. If health and safety conditions at work are not satisfactory, this additional contribution could be applied with a surcharge of up to 100%.
- Employers shall make a mandatory contribution of 0.03% of the employee' gross income to a fund which finances insurance coverage for working parents of children aged 1 to 15, or ages 1-18, whichever applies, that have a serious health condition, so that the parents can take a leave of absence from their work in order to accompany and take care of them; therefore, during this period the parents shall have the right to assistance financed by said fund (in Spanish, "Fondo SANNA") that will replace, in total or partially, their monthly earnings. The collection of this contribution is initially delegated to the ISL and to the employers' association of labour security.
- Employers make payments of 2.4% of each employee's income (0.8% after 11 years of labour relationship and 3% for fixed-term contracts) with an upper earnings limit of CLP 4 768 448 (UF 126.6 monthly) to finance unemployment insurance. These funds are managed privately.

- Employers are required to pay a disability insurance of 1.49% (estimated average for 2024) of the employees' gross income, with an upper earnings limit of CLP 38 102 379 (UF 1011.6), collected by the pension fund manager, and managed by an insurance company.
- If the employee has a high-risk job, the employer has to pay 2% (heavy work) or 1% (less heavy work) of the employee's gross income, with an upper earnings limit of CLP 38 102 379 (UF 1011.6) to the pension fund account.

## Universal cash transfers

Since 2020, a minimum wage bonus has been established to ensure an income floor for every employee working under a Labour Code regulated contract, with a standard weekly schedule between 30 and 45 hours of work and a gross wage under a specific threshold. In addition, the beneficiary must rank within the 90th percentile of the Social Household Registry<sup>6</sup> (in Spanish, Registro Social de Hogares).

For 2024, the Minimum Guaranteed Income required a gross wage under CLP 500 000 ensuring a net income of not less than CLP 379 793.

Another important social benefit corresponds to the "Family Allowance" which consists in a monthly payment available to any retirement pensioner or employees paying social security contributions. The specific amount will be directly determined by the income of the beneficiary and the number of dependent family members within the household.

The following table contains an annual estimation of the different payments by dependant house member and the corresponding income bracket of the beneficiary, applicable in 2024.

2024 Transfer by Dependant	
Annual Income Range (CLP)	Annual Payment (CLP)
0 - 6 471 936	243 936
6 471 936 – 9 452 952	149 700
9 452 952 – 14 743 368	47 304
14 743 368 -	0

As a definition, for every cash transfer that can only be paid to one of the spouses per household and, where both individuals are working, the modelling assumes that the benefit is assigned to the member with the lower earnings.

Formerly known as "March Bonus", the Permanent Family Contribution is an additional payment received by low-income families already participating in other social programs, among them, the Family Allowance. For this segment of beneficiaries, the Permanent Family Contribution consist of a yearly payment for each dependent household member equivalent to CLP 61 793.

In this latest version of the report, an additional universal cash transfer is modelled. The Electronic Family Wallet consists of a fixed monthly payment of CLP 13 500 per dependent household member. Similarly to the Permanent Family Contribution, the Electronic Wallet is automatically available to any individual receiving the family allowance

## Marital status-related transfers

As described in the previous section, the "Family Allowance" is a social benefit paid in accordance with the income and the dependant family members of the beneficiary of each household. This definition for dependant family member can include spouses when their income is below 50% of the minimum legal wage (for 2024, this threshold is estimated to be around CLP 2 880 000 yearly).

### ***Transfers related to dependent children***

For children, the criteria that defines a dependent household member is somewhat broader than for spouses. The following cases can be identified as the most common:

- Adopted children as well as those born to the parents
- Children up to the age of 18 or 24 years provided they are single and regular students in an elementary, secondary, technical, specialised or higher education establishment
- Minors under the care of an individual as a result of an official court order

## **Recent changes in the tax/benefit system**

### ***Changes to labour taxation associated to the COVID pandemic in 2020 and 2021***

The previously mandatory COVID insurance paid by the employer as an NTCP, is no longer obligatory in 2024. The model for this year considers no payment for any of the households in this regard.

## **Memorandum items**

### ***Identification of an average worker***

- The source of information is a survey conducted by the National Statistics Institute (INE) to determine the Salary and Labour Cost Index. This nationwide survey is carried out on a monthly sample and gathers information on salaries and labour costs. It applies to companies with at least 5-worker payrolls grouped in accordance with ISIC4.CL 2012<sup>7</sup>, covering workers in industry sectors B to R<sup>8</sup>.
- The average gross earning was obtained by multiplying the average hourly wage by the average number of hours worked. It covers both full and part-time workers.

### ***Employers' contribution to private health and pension schemes***

- In Chile very few employers make any contributions towards health schemes for their employees, and the relevant information is not available.

## 2024 Parameter values

	Year	2024	
Average earnings/yr	Ave_earn	14 074 320	Country estimate, based on information of wages up to March 2024

## 2024 Tax equations

The functions which are used in the equations (Taper, MIN, Tax etc) are described in the technical note about tax equations. Variable names are defined in the table of parameters above, within the equations table, or are the standard variables “married” and “children”. A reference to a variable with the affix “\_total” indicates the sum of the relevant variable values for the principal and spouse. And the affixes “\_princ” and “\_spouse” indicate the value for the principal and spouse, respectively. Equations for a single person are as shown for the principal, with “\_spouse” values taken as 0.

	Line in country table and intermediate steps	Variable name	Range	Equation
1.	Earnings	earn		
2.	Allowances:	Tax_al	B	Min(Basic_al,earn)
3.	Credits in taxable income	taxbl_cr	B	0
4.	CG taxable income	tax_inc	B	Positive(earn-tax_al)
5.	CG tax before credits	CG_tax_excl	B	Tax(tax_inc, tax_sch)
6.	Tax credits	tax_cr	J	IF(taxinc_princ+taxinc_spouse<='edu_tax_cre_lim,IF(taxinc_spouse'=0,edu_tax_cre*Children,edu_tax_cre*Children*0.5),0)
			S	IF(AND(taxinc_princ+taxinc_spouse<=edu_tax_cre_lim,taxinc_spouse>0),edu_tax_cre*Children*0.5,0)
7.	CG tax	CG_tax	B	Positive(CG_tax_excl-tax_cr)
8.	State and local taxes	local_tax	B	0
9.	Employees' soc security	SSC	B	Tax(earn, SSC_sch)
11.	Family allowance	cash_trans	P/S	VLOOKUP(earn_spouse,CTR_child)*(children+married*IF(earn_principal<=(min_gwage/2);1;0)
12.	Permanent Family Contribution	cash_trans	P/S	CTR_permanent*(children+married*IF(earn_principal<=(min_gwage/2);1;0)
13.	Minimum Guaranteed Income	cash_trans	B	IF(AND(earn_principal>0;earn_principal<CTR_mgi_income_thld),MAX(60000,CTR_mgi_p_low*earn_principal))+IF(AND(earn_principal>=CTR_mgi_income_thld,principal_earn<=CTR_mgi_max_income),MAX(60000,Positive())CTR_mgi_max_pay-CTR_mgi_p_calc*(earn_principal-CTR_mgi_income_thld)))
14.	Employer's soc security	SSC_empr	B	DummyNTCP*(Tax(principal;NTC_un_er)+Tax(principal;NTC_pens_er)+Tax(principal;NTC_mutual_er))+COUNTIF(principal;">0")*COVID_Insurance

Key to range of equation B calculated separately for both principal earner and spouse P calculated for principal only (value taken as 0 for spouse calculation) J calculated once only on a joint basis.

## Notes

<sup>1</sup> Value up to 18 June 2024

<sup>2</sup> Estimated using information of monthly earnings and working hours available up to March 2024.

<sup>3</sup> As for the UTM and the UTA, the values correspond directly to the actual figure for both units as of July. For the UF, an estimate of the average annual value is used. This figure is obtained by assuming a monthly growth from July to December equivalent to its effective average monthly growth between February and June 2024.

<sup>4</sup> By the end of 2023, the government-managed system reported to serve roughly 81% of the national population.

<sup>5</sup> Average cost in 2024 was 1.15% of gross income.

<sup>6</sup> The Social Household Registry is a national information system designed to support the selection process of beneficiaries for a wide base of social programs and cash transfers. This ranking is constructed from data available within government and additional input provided by individuals.

<sup>7</sup> ISIC4.CL 2012 is a Chilean classifier of economic activities, based on ISIC Rev.4.

<sup>8</sup> O (8422) "Defense Activities" and O (8423) "Public order and safety activities" are not included.

<sup>9</sup> The determined cash transfer for each income bracket contains a base amount of CLP 94 500 for the Electronic Family Wallet.

# Colombia

---

This chapter includes data on the income taxes paid by workers, their social security contributions, the family benefits they receive in the form of cash transfers as well as the social security contributions and payroll taxes paid by their employers. Results reported include the marginal and average tax burden for eight different family types.

Methodological information is available for personal income tax systems, compulsory social security contributions to schemes operated within the government sector, universal cash transfers as well as recent changes in the tax/benefit system. The methodology also includes the parameter values and tax equations underlying the data.

Colombia's national currency is the peso (COP). For 2024, the average exchange rate was COP 4 074.43 to USD 1. That same year, the average worker in Colombia earned COP 30 236 442 (country estimate).

Taxes allowances and tax thresholds for the personal income tax system and upper earnings limits for social security contributions are expressed in SMLMV and UVT units. These indicators consider the inflation rate. At December 31 of 2024, the following currency values applied to these units are:

Major revenue items	Unit	COP	USD
Social security contributions	Salario mínimo legal mensual vigente (SMLMV)	1 300 000	325.21
Annual tax thresholds	Unidad de Valor Tributario (UVT)	47 065	11.77

## Personal income tax system

### Central/federal government income taxes

#### *Tax unit*

Each family member declares and pays taxes separately.

#### *Tax allowances and credits*

##### **Standard tax reliefs**

- *Relief for social security contributions:* Employee's compulsory social insurance contributions are non-taxable or excluded income for income tax purposes regardless of whether they are paid to government or private sector (See section on Employees' contributions below).
- 25% of total employment payments, up to an annual maximum exemption of 790 UVT (COP 37 181 350). Law 2277 of 2022 (tax reform) reduced this limit, from a monthly maximum exemption of 240 UVT to an annual one of 790 UVT. Pursuant to the 2012 tax reform act, in determining the 25% exempt income, the taxpayer must take into account its employment income, less the amount of excluded items, allowed deductions, and other exempt items of income.
- Dependent deduction, up to a limit that cannot exceed 10% of the employees' monthly income, nor the equivalent to 32 UVT (annual limit of COP 18 072 960), which does not depend on the number of dependents.
- A new annual dependent deduction of 72 UVT (COP 3 388 680) with a maximum of four dependents. This deduction is not limited to 40% of the taxable income and it can be used at the same time as the current dependent deduction, even if you have only one dependent.

##### **Main non-standard tax reliefs.**

- Voluntary contributions to pension funds and deposits in the so-called "AFC" bank accounts<sup>1</sup>, made on behalf of employees by their employers up to a limit that cannot exceed 30% of the employees' annual income (taking into account the mandatory payments to the general system on pensions), nor the equivalent to 3 800 UVT (COP 178 847 000). According to tax code, non-compulsory employee's contributions to voluntary pension funds are considered exempted items.
- The Act 1607 of 2012 (tax reform) allows taxpayers to deduct of their taxable income each one of the next items:
  - Interest paid within a year for mortgage loans, with a monthly limit of 100 UVT (annual limit of COP 56 478 000).

- Payments made for voluntary health insurance that cover to the employee, spouse and two children or dependent people, up to a monthly limit of 16 UVT (annual limit of COP 9 036 000).

### *Tax schedule*

Because Law 1943 of 2018 was deemed unconstitutional by the Constitutional Court at October 2019, at the end of that year the Congress approved the Law 2010, which kept the income tax regime to individuals in the same way as it was established in the previous tax reform. This tax regime split the individual's income in three "baskets": a general basket, that covers labor, capital, and non-labor income; a pension basket, and a dividends basket.

The income received by employees is reported in the general "basket". The taxable income assessed under this basket is the result of summing all earnings realized during the taxable year, minus: (a) all excluded items (refunds, reductions, discounts, and earnings not considered taxable items of income), (b) all allowed deductions (costs, expenses, and other deductions), and (c) all exempt items.

This system kept the top introduced by Law 1819 of 2016, but in the general basket, in which the sum of allowed deductions and exempt items must be equal to or less than 40% of the taxable income (earnings minus excluded items), or in any event, up to a cap of COP 63 067 100 (limit adjusted by Law 2277 of 2022, from 5 040 UVT to 1 340 UVT) . However, the legislation allows the recognition of costs and expenses related with capital and non-labor income that comply with the requirements for their use into the assessment of the taxable base.

Regarding on the income tax rate, individuals must sum the taxable income that comes from the general basket and the one comes from the pension basket, as well as from dividends basket since 2023, following the adjustment introduced by Law 2277 of 2022 with respect to dividends. The income tax rate that applies to this final amount is as provided in the table below:

Taxable income (UVT)		Taxable income (COP)		Marginal rate	Fixed quota	
Lower limit	Upper limit	Lower limit	Upper limit		UVT	COP
0	1 090	0	51 301 000	0%	0	0
> 1 090	1 700	51 301 000	80 011 000	19%	0	0
> 1 700	4 100	80 011 000	192 967 000	28%	116	5 460 000

> 8 670	18 970	408 054 000	892 823 000	35%	2 296	108 061 000
> 18 970	31 000	892 823 000	1 459 015 000	37%	5 901	277 731 000
> 31 000	and over	1 459 015 000	and over	39%	10 352	487 217 000

### **State and local income taxes**

No taxes apply to income at state or local government level.

### **Compulsory social security contributions to schemes operated within the government sector**

The social security system in Colombia comprises three regimes: the general system on pensions ("sistema general de pensiones"), the general social security system on healthcare ("sistema general de seguridad social en salud"), and the general system on employment risks ("sistema general de riesgos laborales"). The first two operate within the government sector.

The general social security system on healthcare, is financed by public and private funds. The private funds belong essentially to the resources of contributions- contributive regime, which are paid by employers and employees, as well as independent workers, retired persons, and copayments of affiliates at the time of receiving healthcare services. The tax reform of 2016 eliminates the Pro Equity Income

Tax – CREE, that had a specific destination for healthcare and was another source of resources<sup>2</sup>. However, 9 points of the CIT rate will have a specific destination that replaced both two payroll contributions and the portion of the mandatory contribution made by the employer to the healthcare system, regarding on their employees whose individual earnings up to 10 SMLMV. For the rest of the companies, and for all the employees, the total contributions are 12.5% of the monthly wage, of which 8.5% is paid by employers on behalf of their employees whose monthly earnings above 10 SMLMV and 4% by employees. In the case of independent workers, the contribution is also 12.5% but the contribution base is 40% of the monthly income. Although the contributions to the contributive regime are mandatory, they are not classified as taxes but as a NTCP since more than 50% goes to private sector.

The Colombian pension system is a hybrid of two different systems, a defined-contribution and fully-funded pension system and a pay-as-you-go system. The contribution rate is mandatory and the same for both systems. The contributions are 16% of the monthly wage, which are paid 12% by employers and 4% by employees. When the monthly wage is over 4 SMMLV the employee pays an additional rate that goes from 1% up to 2% to Solidarity Fund. Workers can choose between both systems and can switch every 5 years until 10 years before mandatory retirement age. Although these contributions are mandatory, they are not classified as taxes but as a NTCP since more than 50% goes to private sector.

The minimum and maximum base for compulsory contributions is 1 and 25 SMLMV (COP 1 300 000 and COP 32 500 000) respectively. Voluntary contributions can be made to the general system on pensions, and individuals are free to make contributions to a public or to a private pension fund of their choice.

Social security contributions	Base of contribution	Rate
Pensions	Earnings or employment income	16.0%
Solidarity Fund	Earnings or employment income	1.0 – 2.0%
Health	Earnings or employment income	4.0% or 12.5%
Employment Risks	Employment income	0.348% - 8.7%

### ***Employees' contributions***

- For pensions, 4.0% of the employee's monthly earnings, plus a certain percentage between 1.0% and 2.0% of the amount over 4 SMLMV (over COP 5 200 000). The last is named "contributions to the Solidarity Fund".
- For health, 4.0% of the employee's monthly earnings.
- After the Act 1819 of 2016, both, the employee's contributions to pensions and health are included in the model as non-taxable income for income tax in the Colombian legislation.

### ***Employers' contributions***

- For pensions, 12.0% of the employee's monthly earnings.
- For health, 8.5% of the employee's monthly earnings if individual earnings above 10 SMLMV. Otherwise, 0% of the employee's monthly earnings.
- Payments for employment risks are mandatory only in respect of employment and are the sole responsibility of the employer; the rate of this contribution ranges between 0.348% and 8.7%, depending on the activity. A representative rate of 0.522% is used in the Taxing Wages calculations.

## **Universal cash transfers**

### ***Marital status-related transfers***

None.

### ***Transfers related to dependent children***

The “Family Subsidy” is paid on a monthly basis to an employee that works monthly at least 96 hours and receives monthly employment payments that don’t exceed COP 5 200 000 (4 SMLMV). It is assessed on both principal and spouse when they are working at the same time and one of the requirements to receive this subsidy is that the sum of their gross earnings does not exceed COP 7 800 000 (6 SMLMV). The definition of dependents includes children, stepchildren, orphaned brothers and sisters, and parents over 60 years old, all of them economically dependent on the worker.

The amount of the payment is a constant value during the year; it does not have limit related with the number of beneficiaries and it differs between the regions of the country. The annual average Family Allowance or Subsidy to 2023 was COP 661 822 for one beneficiary.

## **Main Changes in Tax/Benefit Systems Since 2019**

### ***Changes to labour taxation due to the COVID pandemic in 2020 and 2021***

Through Decree 558 of 2020, the Government reduced the pension contribution rate, from 16% to 3%, decreasing the payment of both employers and employees for the contributions in April and May 2020, but this Decree was deemed unconstitutional by the Constitutional Court in July 2020. This decision means the full payment of the pension contribution at the normal rate for those months later.

## **Memorandum items**

### ***Identification of an average worker and calculation of earnings***

- The source of information is The Great Integrated Household Survey conducted by the National Administrative Department of Statistics (DANE) with the intention of gathering information about employment conditions of people as well as about the general characteristics of the population. This nationwide survey is carried out on a monthly sample.
- The average gross earnings were obtained by multiplying the average hourly wage by the average number of hours worked, according to the quarterly reports and expresses in a monthly frequency. It covers full time workers (considering a person who works 40 hours or more in her/his main job in a week).

## 2024 Tax equations

The equations for the Colombian system are mostly on an individual basis. But the Family Allowance is assessed on both principal and spouse when they are working at the same time and the sum of their gross earnings does not exceed the limit to receive this subsidy, and otherwise on the principal's earnings. This is shown by the Range indicator in the table below.

The functions which are used in the equations (Taper, MIN, Tax etc) are described in the technical note about tax equations. Variable names are defined in the table of parameters above, within the equations table, or are the standard variables “married” and “children”. A reference to a variable with the affix “\_total” indicates the sum of the relevant variable values for the principal and spouse. And the affixes “\_princ” and “\_spouse” indicate the value for the principal and spouse, respectively. Equations for a single person are as shown for the principal, with “\_spouse” values taken as 0.

Line in country table and intermediate steps	Variable name	Range	Equation
1. Earnings	earn		
2. Total reliefs:	total_rel	B	tax_allow + non_taxable_income
Dependent Children	dependent_children	P/S	IF(earn_princ>=earn_spouse;IF((earn_princ*0,1)>depend_child;depend_child;earn_princ*0,1)*(IF(children>0;1;0));0))
New Dependent Children	Dependent_child_new	P/S	IF(earn_princ>=earn_spouse;VLOOKUP(Children;Dependent_child_new;2;0))
Final Dependent Children	final_dependent_children	P/S	SI(MAX((tax_allow+Dependent_child_new);tax_allow_new_depch)=(tax_allow+Dependent_child_new);(dependent_children+Dependent_child_new);Dependent_child_new)
Exempt Labor Income	exempt_labor_income	B	IF((positive(earn_princ-(non taxable income ntcp+dependent children))*0,25)>exempt_labor_income_limit;exempt_labor_income_limit;(positive(earn_princ-(non taxable income ntcp+dependent children))*0,25))
Exempt Labor Income without current dependent children	exempt_labor_income_without_current_depch	B	IF((SIMPLE(Positive(earn_princ-non taxable income ntcp))*0,25)>Exempt_labor_income_limit;Exempt_labor_income_limit;(SIMPLE(Positive(earn_princ-non taxable income ntcp))*0,25))
Final Exempt Labor Income	final_exempt_labor_income	B	SI(MAX((tax_allow+Dependent_child_new);tax_allow_new_depch)=(tax_allow+Dependent_child_new);exempt_labor_income;exempt_labor_income_without_current_depch)
Allowed Allowances	tax_allow	B	IF((40%*(earn_princ-non taxable income ntcp))>=upper_limit_ex_and_ded;' IF((dependent children+exempt labor income)>=upper_limit_ex_and_ded;upper_limit_ex_and_ded;' (dependent children+exempt labor income)); IF((dependent children+exempt labor income)>(40%*(earn_princ-non taxable income ntcp));40%*(earn_princ-non taxable income ntcp);(dependent children+exempt labor income)))

Final Allowed Allowances	final_tax_allow	B	MAX((tax_allow+Dependent_child_new);tax_allow_new_depch)
Non taxable income NTCP	non_taxable_income	B	IF(earn_princ<low_limit_income_ntc_hlth_pens;0;tax(earn_princ;ntc_hlth_pens))+(IF(earn_princ>upper_limit_income_ntc_solid_fund;(upper_limit_income_ntc_solid_fund*ntc_solid_fund_r6);IF(earn_princ>ntc_solid_fund_w5;(earn_princ*ntc_solid_fund_r6);IF(earn_princ>ntc_solid_fund_w4;(earn_princ*ntc_solid_fund_r5);IF(earn_princ

			>ntc_solid_fund_w3;(earn_princ*ntc_solid_fund_r4);IF(earn_princ>ntc_solid_fund_w2;(earn_princ*ntc_solid_fund_r3);IF(earn_princ>ntc_solid_fund_w1;(earn_princ*ntc_solid_fund_r2);IF(earn_princ>ntc_solid_fund_w0;(earn_princ*ntc_solid_fund_r1);(earn_princ*ntc_solid_fund_r0)))))))))
3. Credits in taxable income	taxbl_cr	B	0
4. CG taxable income	tax_inc	B	Positive(earn_princ- Total reliefs+ cred_tx_inc)
5. CG tax before credits	CG_tax_excl	B	Tax(tax_inc, tax_sch)
6. Tax credits	tax_cr	B	0
7. CG tax	CG_tax	B	Positive(CG tax before credits- tax_cr)
8. State and local taxes	local_tax	B	0
9. Employees' soc security	SSC	B	n.a.
11. Cash transfer	cash_trans	J	IF(children=0;0;IF(earn_spouse>0;IF((earn_princ+earn_spouse)>ctr_child_limit2;0;IF((earn_princ+earn_spouse)>=ctr_child_limit1;ctr_child*children;IF((earn_princ+earn_spouse)>0;ctr_child*children*2))));IF(earn_princ>ctr_child_limit1;0;ctr_child*children)))
12. Employer's soc security	SSC_empr	B	n.a.

Key to range of equation B calculated separately for both principal earner and spouse; P/S calculated for principal or spouse only (value taken as 0 for the other earner calculation); J calculated once only on a joint basis. T calculated on a joint basis when both principal and spouse are workers, and otherwise on the principal's earnings.

## Notes

<sup>1</sup> The so-called “AFC” bank accounts (“*cuentas de ahorro para el fomento a la construcción - AFC*”) are savings bank accounts specially provided for the acquisition of real estate property, so the funds deposited in such accounts can only be used for the acquisition of the aforementioned property.

<sup>2</sup> The 2012 tax reform act introduced this new tax to alleviate the costs of hiring formal labour incurred by private employers. These companies had to be taxpayers into the income tax to access to this benefit. Both the companies inside the free trade zones regime and the non-profit entities had to follow with the contribution to the healthcare system, regardless of the earnings of their employees.

# Costa Rica

---

This chapter includes data on the income taxes paid by workers, their social security contributions, the family benefits they receive in the form of cash transfers as well as the social security contributions and payroll taxes paid by their employers. Results reported include the marginal and average tax burden for eight different family types.

Methodological information is available for personal income tax systems, compulsory social security contributions to schemes operated within the government sector, universal cash transfers as well as recent changes in the tax/benefit system. The methodology also includes the parameter values and tax equations underlying the data.

The national currency is the Costa Rican colon. In 2024, on average the CRC 515.11 equalled a 1 US dollar. The average worker earned CRC 9.109.145 on an annual basis.

## Personal income tax system

The fiscal year begins on January 1<sup>st</sup> and ends the following December 31.

### **Central government income tax**

The Costa Rica Income tax is applied to the income in cash or in kind, continuous or occasional, from any Costa Rican source perceived or accrued by individuals or legal entities domiciled in the country.

Costa Rica's labour legislation provides for payment of an additional salary or "bonus" paid in December of each year, the benefit is determined on the monthly average wage of the worker's other concepts be paid as overtime. This concept is not subject to social security contributions and is not taxed on the income tax.

#### *Exempt income:*

The most noteworthy types of exempt income include:

- Inheritances, bequests and other forms of inherited property.
- Lottery prizes
- The annual bonus paid up one twelfth of the annual income.

#### *Tax unit*

Domestic natural persons who receive income of Costa Rican source, whether or not they have resided in the country during the respective fiscal period. Resident individuals are also subject to social security contributions to the Costa Rican Social Security Fund (CCSS) and fees to the Popular Bank.

#### *Tax allowances and tax credits*

##### **Standard tax allowances and tax credits**

- CRC 20.760 for each child in the household.
- CRC 31.440 for the spouse, which can only be claimed by one of the spouses.

Those tax credits are wastable.

##### **Main non-standard tax allowances and tax credits**

None.

#### *Tax schedule*

The annual income tax schedule is determined on the taxable income according to the following schedule for 2024:

From	Up to	Rate
0	CRC 11.148.000	0%
CRC 11.148.000	CRC 16.356.000	10%
CRC 16.356.000	CRC 28.704.000	15%
CRC 28.704.000	CRC 57.396.000	20%
CRC 57.396.000	Onwards	25%

### **State and local taxes**

No state or local taxes are levied on wages.

## **Compulsory social security contributions to schemes operated within the government sector**

### **Employee contributions**

Program	Rate (%)
Oldage, disability and death program (IVM)	4.17
Healthcare and Maternity Insurance (SEM)	5.50
Popular Bank Fee	1.00

### **Employer contributions**

Employers are required to contribute to the following public programs.

Program	Rate %
Oldage, disability and death program (IVM)	5.42
Healthcare and Maternity Insurance (SEM)	9.25
Popular Bank Fee	0.50
Unemployment insurance	2.50
Family allowances	5.00
Complementary pensions	2.00
Learning National Institute (INA)	1.50
Joint Institute for Social Aid (IMAS)	0.50

## **Universal cash transfers**

### **Marital status-related transfers**

None.

### **Transfers related to dependent children**

None.

### **Recent changes in the tax/benefit system**

None.

### **Memorandum items**

None.

## 2024 Tax equations

The functions which are used in the equations (Taper, MIN, Tax etc) are described in the technical note about tax equations. Variable names are defined in the table of parameters above, within the equations table, or are the standard variables “married” and “children”. A reference to a variable with the affix “\_total” indicates the sum of the relevant variable values for the principal and spouse. And the affixes “\_princ” and “\_spouse” indicate the value for the principal and spouse, respectively. Equations for a single person are as shown for the principal, with “\_spouse” values taken as 0.

	Line in country table and intermediate steps	Variable name	Range	Equation
1.	Earnings	earn		
2.	Allowances:	Tax_al	B	MIN(earn/12,earn/T_days*Bonus)
3.	Credits in taxable income	taxbl_cr		-
4.	CG taxable income	tax_inc	B	Positive(earn-tax_al)
5.	CG tax before credits	CG_tax_excl	B	Tax(tax_inc,tax_sch)
6.	Tax credits :	tax_cr	P	IF(Married=1,Tax_cr_sp,0)+ Tax_cr_ch*Children
7.	CG tax	CG_tax	B	Positive(CG_tax_excl-tax_cr)
8.	State and local taxes	local_tax		-
9.	Employees' soc security	SSC	B	MAX(Min_wage,earn)*SSC_total_ee
11.	Cash transfers	cash_trans		-
13.	Employer's soc security	SSC_empr	B	MAX(Min_wage,earn)*SSC_total_er

Key to range of equation B calculated separately for both principal earner and spouse P calculated for principal only (value taken as 0 for spouse calculation) J calculated once only on a joint basis.

The national currency is the Czechia koruna (CZK). In May 2024, CZK 23,22 were equal to USD 1. In that year, the average worker earned CZK 549 741 (Secretariat's estimate).

## Personal Income Tax System

### Central government income taxes

#### *Tax unit*

- The tax unit is the individual.

#### *Tax allowances and tax credits*

##### **Standard reliefs**

- Relief for social and health security contributions. Employees' social security contributions (see Section on employees' contributions) are not deductible for income tax purposes.

##### **Main non-standard tax reliefs applicable to an AW**

- Charitable donations allowance: It is possible to deduct from the tax base the value of gratuitous performance provided to municipalities, regions, government branches, and legal entities defined in Income Tax Law that organise public collections for science and education, research and development purposes, culture, schools, healthcare, environmental, humanitarian or charitable purposes (more information in Income Tax Law). The provision of allowances is provided if the total value of gratuitous performance in the period of taxation exceeds 2 % of the tax base or amounts to at least CZK 1 000. A similar procedure shall apply for gratuitous performance to finance removing the consequences of a natural disaster occurring in the territory of the EU Member State or a State of the European Economic Area. In total, a maximum of 15% can be deducted from the tax base. As gratuitous performance for healthcare purposes, the value of one donation of blood or blood components from a donor who was not provided with financial compensation for the expenses connected with, shall be valued at a sum of CZK 3 000, the value of donation of an organ from a living donor shall be valued at a sum of CZK 20 000, and the value of one donation of hematopoietic cells, shall be valued at a sum of CZK 20 000.
- Interest payments: The tax base shall be reduced by the sum equal to the interest paid in the period of taxation on building society credit, interest on mortgage credit loaned by a bank, reduced by the State contribution granted under special legal regulations that is used to finance housing needs (more information in Income Tax Law). The total sum of interest by which the tax base is reduced on all credits of taxpayers in the same jointly managed household must not exceed CZK 150 000 (For mortgage loans originated before January 1, 2021 the total sum of interest which can be reduced is CZK 300 000 per a household.) When interest is only paid for part of the year, the deducted sum must not exceed one twelfth of such maximum amount for each month of paying interest.
- Supplementary pension scheme contributions: the tax base may be reduced by a contribution, in the maximum total amount of CZK 48 000, paid by a taxpayer to his/her tax-supported old-age savings products and tax-supported long-term care insurance of which he/she is a policyholder. Contributions to an old-age savings product include insurance premiums for private life insurance and assets credited to a long-term investment product.

### **Tax schedule**

Since 2021, the tax base is determined on gross income. The tax is calculated from the tax base reduced by the non-taxable part of the tax base and by items deductible from the tax base (see the section on Main non-standard tax reliefs), rounded down to whole hundreds of CZK.

As of 2021, the Czechia returns to progressive taxation, the tax rate amounts to

- 15% for the tax base up to 36-fold of an average salary (the threshold for 2024 is CZK 1 582 812)
- 23% for the part of the tax base exceeding 36-fold of an average salary.

### **Tax credits**

The calculated tax liability (see the Tax schedule section) shall be further reduced by tax credits.

- Basic tax credit of CZK 30 840 per taxpayer.
- Tax credit of CZK 24 840 for spouse living with a taxpayer in a jointly managed household, provided that such a spouse does not have their own income exceeding CZK 68 000 for the period of taxation and at the same time taking care of a child who is no older than three years.
- Credit of CZK 15 204 for first child, credit of CZK 22 320 for second child, credit of CZK 27 840 for third and each additional child (irrespective of the child's own income) living with a taxpayer in a common household on the territory of a Member State of the EU, Norway or Iceland, if the child satisfies one or more of the following criteria:
  - age below 18 year of age,
  - age below 26 year of age and receiving full-time education,
  - age below 26 year of age and physically or mentally disabled provided that the child is not in receipt of a state disability payment

If the child is a “ZTP-P” card holder (the child with a certain type of disabilities), the tax credit is doubled. The taxpayer can claim the tax credit in the form of tax reliefs or tax bonuses or their combination.

- Basic disability tax credit of CZK 2 520, if the taxpayer is granted a disability pension for a first or second degree disability under a special law.
- Extended disability tax credit of CZK 5 040 if the taxpayer is granted a disability pension for a third degree disability under a special law.
- Tax credit of CZK 16 140 for the holder of a card identifying them as a person with a particularly severe disability requiring a guide (ZTP/P).

The non-standard tax are not included in the tax equations underlying the Taxing Wages results.

### **State and local income tax**

There are no regional or local income taxes.

## **Compulsory Social Security Contributions to Schemes Operated within the Government Sector**

The maximum annual earnings used to calculate social security contributions are 48 times the national average monthly wage. The maximum ceiling for social security contributions is CZK 2 110 416 for the year 2024. The maximum ceiling for health insurance has not existed since 2013.

### ***Employees' contributions***

Compulsory contributions of 11,6% of gross wages and salaries are paid by all employees into government operated schemes. The total is made up as follows (in %):

Health insurance	4.5
Social insurance	6.5
Sickness insurance	0.6

### ***Employers' contributions***

The total contribution for employers is 33.8% of gross earnings.

The contribution consists of the health insurance contribution (9% of gross wages and salaries) and social insurance (24.8 %).

## **Universal Cash Transfers**

### ***Transfers related to marital status***

None.

### ***Transfers for dependent children***

Non-taxable child allowances are the basic income-tested benefit provided to a dependent child with the objective to contribute to the coverage of costs incurred in his upbringing and sustenance. Entitlement to the child allowance is bound with certain income criteria. The central government pays this allowance in respect of each dependent child based on the family income level and provided that family's income does not exceed 3.4 times the relevant family's living minimum (LM) and simultaneously fulfils the minimum income condition of CZK 4 860/monthly/one of parents since 1 January 2023. Family income includes the earnings of both parents net of income tax and the employees' social security and health insurance contributions. Child allowances are provided at three levels depending on the age of the child and are paid as follows:

Family Income	up to 3.4 LM
Age of child	Total payment CZK per month
below 6 year of age	1 330
6–15 years	1 470
15–26 years	1 580

The monthly family's LM for the AW-type family with children can be calculated by summing the following amounts (in CZK) since 1 January 2023:

Living minimum	
Basic personal requirement	
Single	4 860
First person in household	4 470
Second and other persons who are not a dependent child	4 040
Child aged below 6	2 480
Child aged between 6 and 15	3 050
Child aged between 15 and 26	3 490
Household expenses	
One person household	4 860

Two person household	8 510
Three person household	10 000
Four person household	14 040
Five person household	17 530

The LM is required by law. In case that family income (income of persons assessed together) is not achieved, the amount of family's LM can be put in a request for state social support (housing benefit, family benefits, social assistance and other). The system applies the solidarity principle between the high-income families and low-income families, as well as between the childless families and those with children.

### ***Additional transfers***

Additional allowances (means-tested benefits in material need) are paid by the central government to low income families in adverse social and financial situation. The amount transferred is derived from the LM and varies according to total family income including family allowances and own efforts, opportunities and needs are taken into account. This allowance is not included in the computation.

## **Main Changes in Tax/Benefit Systems since 2024**

List of main changes that have impact on the current computation of Taxing Wages:

- As of January the 1<sup>st</sup> so called Consolidation package, which was introduced due to fiscal consolidation and simplification of the Czech tax system, is in force. Main changes the consolidation package covers are:
  - Abolition of student tax credit and tax credit for child placement
  - Limitation of tax credit for spouse which can only be used when spouse is taking care of a child who is no older than three years
  - Decrease of threshold for the second PIT rate from 4 times to 3 times the average wage on the monthly basis

## **Memorandum Items**

### ***Identification of AW and valuation of earnings***

The Ministry of Finance estimates the average earnings of the AW based on the data supplied by the Czechia Statistical Office. The calculation of the average earnings is made by CZ-NACE division, which is compatible with ISIC classifications Ver. 4.

### ***Employers' contributions to private pension, health and related schemes***

There are supplementary private pension schemes only, but employers' contributions vary. Relevant information is not available.

## 2024 Parameter values

## 2024 Tax equations

The equations for the Czechia system are on an individual basis. But the spouse tax credit is relevant only to the calculation for the principal earner and cash transfers are calculated only once. This is shown by the Range indicator in the table below.

The functions which are used in the equations (Taper, MIN, Tax etc) are described in the technical note about tax equations. Variable names are defined in the table of parameters above, within the equations table, or are the standard variables “married” and “children”. A reference to a variable with the affix “\_total” indicates the sum of the relevant variable values for the principal and spouse. And the affixes “\_princ” and “\_spouse” indicate the value for the principal and spouse, respectively. Equations for a single person are as shown for the principal, with “\_spouse” values taken as 0.

		Variable name	Range	Equation
1.	Earnings	earn	B	
2 a	CG taxable income base	tax_inc_princ_base	B	IF(earn<tax_sec_bracket;earn;IF(earn>tax_sec_bracket;tax_sec_bracket))
2b	CG taxable income second bracket	Tax_inc_princ_sec	B	IF(earn>tax_sec_bracket;earn-tax_sec_bracket;0)
	CG tax before credits			
	CG tax before credits principal	CG_tax_excl_princ	B	Tax(tax_inc_princ_base, tax_rate_base)+Tax(tax_inc_princ_se,tax_rate_sec)
4.	Tax credits:			
	Tax credit for children	tax_cr_ch	P	If (number of children>3; (number of children - 3)*child_cr_3+child_cr_1+child_cr_2+child_cr_3; If (number of children>2;child_cr_1 +child_cr_2 + child_cr_3; If (number of children>1;child_cr_1+child_cr_2; If (number of children>0;child_cr_1; If (number of children=0;0))))
	Basic tax credit	tax_cr_bas	B	tax_cr_bas
	Tax credit for spouse	tax_cr_spouse	P	Married*if(earn<tax_cr_spo_inc_ceil;age_late_child<3);tax_cr_spo;0)
5.	CG tax			
	CG tax principal	CG_tax_princ	B	Max(CG_tax_excl_princ - tax_cr_bas_princ - tax_cr_spo-tax_cr-preschool , 0 ) - tax_cr_ch
6.	State and local taxes	local_tax	B	0
7.	Employees' social security	SSs SSh	B B	MIN(earn,soc_sec_si__ceil)*SSs_rate earn*SSh_rate
8.	Cash transfers			
	Net family income	net_inc	J	earn_total-CG_tax_total-SSC_total
9.	Living minimum (monthly)	LM	J	VLOOKUP((1+Married+Children);house_exp;2;FALSE)
10.	Total cash transfers	cash_trans	J	Children*IF((net_inc-tax_cr_ch)<=(3,4)*LM*12;transf_1*12)
11.	Employer's social security	SSs_empr SSh_empr	B B	MIN(earn,soc_sec_sir_ceil)*SSs_empr_rate earn*SSh_empr_rate

Key to range of equation: B calculated separately for both principal earner and spouse; P calculated for principal only (value taken as 0 for spouse calculation); J calculated once only on a joint basis.

Results reported include the marginal and average tax burden for eight different family types.

Methodological information is available for personal income tax systems, compulsory social security contributions to schemes operated within the government sector, universal cash transfers as well as recent changes in the tax/benefit system. The methodology also includes the parameter values and tax equations underlying the data.

The national currency in Denmark is the Danish krone (DKK). In 2024, the exchange rate was USD 1 to DKK 6.89. In that year, the average worker earned DKK 509 093 (Secretariat estimate).

## Personal income tax system

In the Danish personal income tax system, the income of the individual taxpayer is split into three categories:

- Personal income, which consists of employment income, business income, pensions, unemployment benefits etc. and with fully deductibility of Labour Market Contributions and pension contributions (except lump sum savings).
- Capital income (e.g., interest income and some capital gains) is calculated as a net amount (the sum of positive and negative capital income net of interest expenses). Dividend income and the property value of owner-occupied dwellings are taxed at different tax rates.
- Taxable income – the aggregate of personal income and capital income less deductions (e.g., work-related expenses etc.).

All three categories are relevant for various tax rates, see the Tax Schedule Section.

Regarding the tax unit, the earned income of each spouse is taxed separately. However, as is mentioned in the Tax Schedule Section, some unutilised personal allowances can be transferred between them.

## Tax allowances and tax credits

### *Standard reliefs*

Wage or salary earners can deduct certain expenses with some relation to earning their income (e.g., transport expenses, trade union membership dues, unemployment premiums) from taxable income.

Tax allowances based on earned income are automatically issued through the tax system. The tax allowances and credits related to earnings are calculated based on gross earnings including contributions to pensions from both employer and employee.

The standard earned income tax credit is an employment allowance of 10.65% of earned income including pension contributions to a maximum of DKK 45 100 when calculating taxable income. Single parents get an extra employment allowance of 6.25% in 2024 with a maximum allowance of DKK 25 300. The effective value of the credit is equal to the average municipality tax (25.067%) multiplied by the value of the allowance.

There is an additional allowance awarded to working taxpayers. Taxpayers with a total labour income (including pension contributions) of at least DKK 216 100 receives a job allowance of 4.5% on taxable income. The effective value of the credit is equal to about DKK 701.9 ( $25.067\% \times \text{DKK } 2\,800 = \text{DKK } 701.9$ ).

In addition, contributions to pension funds by both employers and employees are awarded with an allowance of 12% of contributions for employees with more than 15 years until official retirement age and 32% for employees with less than 15 years until retirement. The allowance applies only to pension contributions up to DKK 80 600. Pensions contributions from both employer and employee amount to around 12.1% of total wages (including pension contributions) on average when including payments to a supplementary pension scheme. On average, one third of the pension contributions are contributions from the employee, while the remaining two thirds are from the employer. Even though all types of pension contributions are considered as NTCP, the related allowance is considered as a standard tax relief.

### *Main non-standard tax reliefs applicable to an AW*

- Interest payments are fully deductible from capital income. Negative net capital income grants a deduction in taxable income of 33.018% (25.018% + 8%) until a fixed threshold of DKK 50 000 and then 25.018% for the remaining amount.
- The non-standard deduction for wage and salary earners: The work-related expenses are deductible from taxable income, however case law is quite strict in requiring that the expense is necessary for employees' earning of income in the third category ("other costs"). The main items are:
  - The actual costs to contributions to unemployment insurance and trade unions (limit for the latter DKK 6 000);
  - Expenses to transportation to the workplace are deductible at standardised rates: Up to 24 km. per day: no deduction. 25–120 km.: DKK 2.19 per km. Above 120 km.: DKK 1.1 per km. as a standard, but transport from municipalities placed in the outskirts of the country gives a credit of DKK 2.19 per km. also above 120 km. The deduction is only applicable for the days, where the transport is actually performed.
  - Other costs above DKK 6 700, if the costs are necessary to earn income.
- Contributions/premiums paid to private pension saving plans except lump sum savings are deductible from personal income. From 1999 onwards, contributions/premiums paid to private pension saving plans with sum payments are no longer deductible from income subject to the top tax bracket rate. From 2013 onwards, contributions/premiums paid to private pension saving plans with sum payments are no longer deductible.
- Other reliefs:
  - Alimonies, if according to contract, are deductible from taxable income.
  - Contributions to certain non-profit institutions are deductible from taxable income (limit DKK 17 700).
  - Losses incurred from unincorporated business in earlier years are, in principle, deductible from personal income.

### *Tax credits*

Each individual is granted a personal allowance, which is converted into a wastable tax credit by applying the marginal tax rate of the first bracket of the income tax schedule. The tax credit for all taxpayers amounts to:

For central government income tax	12.01% of DKK 49 700 = DKK 5 969
For municipal income tax	25.067% of DKK 49 700 = DKK 12 458

If a married person cannot utilise the personal allowance, the unutilised part is transferred to the spouse.

## **Central government income taxes**

### *Tax schedule*

Individuals pay an 8% Labour Market Contribution levied on the gross wage or other income from work before the deduction of any allowance.

Before 2008, the revenue was earmarked for certain social security expenditures through the Labour market Fund, but this system was abolished from 2008, and the tax enters the budget in the same way as any other income taxes. From 2011 the last links regarding social security of the tax were removed making

all taxpayers working in Denmark pay the labour market contribution. The labour market contribution is thus treated as a PIT in Taxing Wages from 2008.

Low tax bracket to the central government is assessed on the aggregate of personal income and positive net capital income at the rate of 12.01%.

From 2010 and onwards the medium tax bracket was abolished.

Top tax bracket to the central government is assessed on the excess of DKK 588 900 of the aggregate of personal income and positive net capital income in excess of DKK 50 500 at the rate of 15%. If a married individual cannot utilise the total allowance of DKK 588 900, the unutilised part is not transferred to the spouse.

If the marginal tax rate including central government tax, municipality tax and top bracket tax exceeds 52.07%, the top tax bracket rate is reduced by the difference between the marginal tax rate and 52.07%.

## **State and local income taxes**

### *General description*

Local income taxes are levied only by the municipalities. The rates vary across jurisdictions.

### *Tax base*

The tax base is taxable income (see the Personal income tax system Section). Tax credit varies with tax rates. The average amount is given below.

### *Tax rates*

- Lowest rate: 23.36% (municipalities);
- Highest rate: 26.30% (municipalities);
- Average rate: 25.067% (municipalities);

The average rate is used in this study. It is applied to the tax base after deduction of personal allowances (see Section on Tax allowances and tax credits).

## **Compulsory Social Security Contributions to Schemes Operated Within the Government Sector**

### ***Employees' contributions***

In 2022 employees on average paid DKK 12 311 for unemployment insurance. From 1999 onwards, the contribution for unemployment insurance is split into two: one part consists of the contribution for unemployment insurance (DKK 4 416) while the other part consists of a voluntary contribution to an early retirement scheme (DKK 6 372). In addition, an administration fee of DKK 1 524 on average is added.

Contributions to unemployment funds are not mandatory. Nevertheless, these payments have up until the implementation of ESA 2010 and the major revision of the Danish national accounts in the autumn 2014 been defined as social security contributions and classified as taxes in the Danish national accounts because there is no direct link between what members pay to the schemes and what they receive, and the funds are subsidized by the state. The contributions to the unemployment funds and the church tax are no longer classified as taxes in the Danish national accounts.

## Universal Cash Transfers

The transfers for each dependent child are as follows:

Age group	Yearly amount (DKK) for each child
0–2	20 496
3–6	16 224
7–17	12 768

The transfer is reduced when the tax base of the top-bracket tax of a parent exceeds DKK 882 700. There are additional special amounts for single parents: the transfer for each dependent child is DKK 6 432 per year and another yearly transfer of DKK 6 556 regardless of the number of children.

Individuals with children younger than the age of 18 receive a ‘supplementary green check’ of DKK 240 per child for up to two children. The ‘green check’ is split in half among the two partners of a married couple. The ‘green check’ is nominally fixed and is phased out at a rate of 7.5% for income after labour market contribution above DKK 509 964.

## Main Changes in Tax/Benefit Systems

From 2000 to 2002, the low tax bracket rate has been reduced from 7% to 5.5%. The low tax bracket is assessed on the aggregate of personal income and positive net capital income.

After the parliamentary elections in 2001, the Conservative/Liberal government adopted a tax freeze policy, which implied that tax rates could not be increased, either in nominal or relative terms, during that government term. Taxes were therefore not increased during the period 2002–2005. After the parliamentary elections in February 2005, the Conservative/Liberal government and the tax freeze policy were confirmed.

In order to respect the “tax freeze”, the low tax bracket has been reduced by 0.36% from 2004 to 2010 as a compensation for increases in local income taxes from 33.31% in 2004 to 33.66% in 2011.

In the spring of 2003, the government agreed with one of the opposition parties to implement a tax package. The aim of this package was to decrease the level of labour taxation in Denmark, and thereby to reduce the distortions in the labour market and to improve the incentives to work. The package contained two main elements: an increase of the threshold for the medium tax bracket of nearly DKK 50 000 and the introduction of a tax credit scheme whereby the taxpayer can deduct 2.5% of earned income to a maximum of DKK 7 500 (in 2007) in the calculation of taxable income.

Before 2004, a compulsory contribution of 1% of employees’ gross earnings was paid to an individual Labour Market Supplementary Pension Scheme established for the employee – this contribution is not considered as a social security contribution but rather as savings being made by the individual. However, from 2004 to 2010, this contribution was suspended and finally abolished, and the deposits paid out as of April 2010.

In September 2007, the tax cuts from the 2003-package were extended. The threshold for the medium tax bracket was to be raised with DKK 57 900 in 2009 to meet with the top tax bracket threshold. The deductible tax credit was increased to 4.0% of earned income in 2008 and to 4.25% in 2009; thus, raising the maximum to 12 300 in 2008 and to 13 600 in 2009. The effective value of the credit and of the personal income allowance is equal to the local income tax rate, the church tax plus the health care tax rate (31.63% on average in 2013) multiplied by the value of the deduction.

From the 1st of January 2007 a Local Government Reform has come into force, which changes the structure of labour taxation. The reform however had only a minimal impact on the overall level of taxation. The number of municipalities has been cut from 270 to 98 and five regions have replaced the 14 counties.

The regions will not impose taxes but will be financed through state subsidies and by contributions from the municipalities. The reform implied an increase in the average municipal tax rate from 22.1% in 2006 to 24.577% in 2007. Since then, there has been a further increase in the average municipal tax to 24.907% in 2013. The county tax has been replaced by a new health care tax of 8% which is levied by central government. The health care tax rate is decreased to 6% in 2013. The levels of taxation have thus been reduced from three to two: only the central and local governments now levy taxes.

In the spring of 2009, the government and one of the opposition parties agreed upon a major tax reform to be phased in from 2010 to 2019. The reform aims at reducing the high marginal tax rates on personal income and thus to stimulate labour supply in the medium to long-term. The reform decreases income taxes by DKK 29 billion in 2010. The tax reform is planned to be revenue neutral as a whole but was underfinanced in the short run (2010-12) in order to stimulate the economy. The main measures taken in 2010 include the reduction of the rate of the bottom tax bracket from 5.26% to 3.67%, abolition of the medium tax bracket with the 6% rate altogether and increase the top tax bracket threshold by DKK 28 800 to DKK 389 000. The reform will decrease the lowest marginal tax rate from 42.4% to 41.0% and the highest marginal tax rate on labour income from 63.0% to 56.1%. The marginal tax rate on positive net capital income (up to 51.5 after abolition of the middle tax bracket) is further reduced for the vast majority by introduction of an extra allowance of DKK 40 000 (DKK 80 000 for married couples) for positive net capital income in the top bracket tax.

The reform is partly financed by higher energy, transport and environmental taxes to support the energy and climate policy objectives of the government, and also by increases of excise rates on health-related goods (fat, candy, sugary drinks, tobacco). These increases are partly compensated by giving a 'green check' to households (see section on Universal Cash Transfers). The tax reform is also partly financed by base broadening measures. The measures include a gradual reduction from 2012 to 2019 of the tax value (from 33.5% to 25.5%) of assessment oriented deductions and limitations of the tax deductibility of net interest payments over a nominal threshold of DKK 50 000 (DKK 100 000 for married couples). Also, the deductibility of payments above DKK 100 000 a year to individual pension insurance schemes with less than life-long coverage has been limited, as well as tightening of the tax treatment of company cars and other fringe benefits. Furthermore, a 6% tax is imposed from 2011 on pension payments exceeding DKK 362 800.

To consolidate the budget, a *Fiscal Consolidation Agreement* was reached in May 2010, somewhat modifying the prescriptions of the Spring Package of 2009.

The specific provisions of the *Fiscal Consolidation Agreement* include:

- The suspension from 2011 until 2013 of automatic adjustments in various tax thresholds (including personal allowances).
- Postponing from 2011 to 2014 the increase of the threshold for the top income tax rate (15%) from DKK 389 900 to 409 100 (EUR 52 316 to 54 892). The increase was an element of the 2009 tax reform.
- The labour union membership fees' tax deductibility is limited to DKK 3 000 (EUR 403) from the year 2011. The threshold is not adjusted.
- From 2011, the annual amount of child allowance is limited to DKK 35 000 (EUR 4 696), irrespective of the number of children. This was abolished by the new government by 2012. Child allowances will be gradually reduced by 5% until 2013.

As part of the Finance Act 2012 it was decided to introduce an 'additional green check' to people beyond 18 years with low income (less than DKK 212 000). The 'additional green check' is DKK 280.

In June 2012 a tax reform was reached. Included in the reform were changes in the earned income tax credit and the top tax bracket. The earned income tax credit is gradually raised from 4.40% in 2012 to 10.65% in 2022 (6.95% in 2013) where the maximum limit of earned income tax credit is raised from DKK

14 100 in 2012 to DKK 34 100 in 2022 (DKK 22 300 in 2013). Furthermore, a special earned income tax credit for single parents was decided from 2014. This will be gradually introduced to the amount of 6.25% in 2022 with a maximum limit of DKK 20 000. In The Tax Reform 2012 it was also decided to gradually raise the top tax bracket from DKK 389 900 in 2012 to DKK 467 000 in 2022 (DKK 421 000 in 2013).

As part of the Finance Act 2013 an agreement, The Excise Duty and Competition Package, was reached. This agreement includes a decrease in the excise duty on electricity, an abolition of the fat tax and a planned expansion in the excise duty on sugar, which will reduce expenses of both consumers and companies. This was financed by an increase in the bottom tax rate of 0.19 percentage points and a reduction in the personal allowance by DKK 900 for all persons (under and over 18 years) introduced from the income year 2013. As a consequence, the marginal tax ceiling was increased from 51.5% to 51.7%. It is estimated that the abolished excise duties and the increased income taxes will have similar effects on distribution and labour supply.

Certain elements of the tax reform from 2012 were accelerated in the 2014 Budget. The employment allowance is adjusted upwards to 7.65% (2014), 8.05% (2015), 8.3% (2016) and 8.75% (2017), with a simultaneous increase of the maximum allowance from DKK 25 000 in 2014 to DKK 28 600 in 2018. The extra employment allowance for single parents is increased to 5.40% in 2014 (instead of 2.60%) with a maximum allowance of DKK 17 700.

Growth Plan 2014 contained measures to reduce the public service obligation on electricity and roll back an increase in excise duty on fossil fuel. As part of the financing of Growth Plan 2014 the low tax bracket rate is increased by 0.28 percentage point over the next five years, including 0.25 percentage point in 2015, with a parallel increase in the tax ceiling. Also, the green check and the supplementary green check are reduced over the next five years, starting in 2015.

In the autumn 2014, the new ESA 2010 guidelines (European System of National and Regional Accounts) and a major revision of the Danish national accounts were implemented which changed the classification of a few taxes. For example, the church tax and contributions to the unemployment fund are no longer classified as taxes, but as volunteer contributions (see Section on Employees' contributions).

As part of the Finance Act 2015 the tax deductibility of labour union membership fees is increased from DKK 3 000 to DKK 6 000 in 2015.

The Finance Act of 2016 included an abolishment of the so-called PSO-excise duty. To finance the abolishment the tax rate for the bottom tax bracket will be increased with 0.05 percentage point from 2018 increasing to 0.09 percentage point in 2022. Fully phased-in the tax rate for the bottom tax bracket will be 12.20% in 2022. Additionally, the tax ceiling will be increased from 51.95% in 2017 to 52.07% in 2022. The 'green check' will be reduced with 190 DKK from 2018 increasing to 380 DKK in 2022. The 'additional green check' will be lowered proportionally. Low-income earners such as senior citizens and early retirees are exempt from the decrease in the 'green check'.

In February 2018, an agreement on lower tax on labour income and larger deductions for pension payments was made. The agreement will gradually be introduced from 2018 to 2020 and consists of the following elements: 1) Additional tax deductions for pension payments. The deduction will be 12% for persons with more than 15 years until they reach state pension age and 32% if they have 15 years or less - up to DKK 70,000. 2) A new job allowance of 4.5% of labour on income over DKK 187 500 to a maximum of DKK 2 500. 3) Expansion of the basis of the employment allowance to also cover pension payments. 4) Increase of the ceiling for the employment allowance from DKK 37 400 to 38 400. 5) Lowering of the bottom-bracket tax rate with 0.02 percentage points.

In March 2018 it was agreed to gradually abolish the media license towards 2022. The agreement was financed by reducing personal allowance for persons over the age of 18 by DKK 2 900.

The Finance Act of 2019 and 2020 included a reduction of the bottom tax of 0.03 percentage points each as compensation for an increase in the municipal tax.

The Finance Act of 2021 included a reduction of the bottom tax from of 0.02 percentages points relative to baseline in 2021 and 2022 – so the bottom tax went from expected 12,11 and 12,12 percentages respectively to 12,09 and 12.10 percentages respectively – as compensation for an increase in the municipal tax.

The Finance Act of 2022 included a reduction in the bottom-bracket tax of 0,01 percentage points as a compensation for an increase in the municipal tax. Thereby the bottom-bracket tax in 2022 and 2023 is at 12,09 pct.

In January 2022 it was agreed to increase the maximum employment allowance with DKK 700 from 2023 and with another DKK 1 200 from 2025. With the increase, the maximum employment allowance is going to be DKK 43 500 from 2025. With the agreement the tax deduction on trade union membership dues is increased from DKK 6 000 to DKK 7 000 yearly from 2024.

In June 2022 it was agreed to increase the maximum employment allowance with DKK 1.900 from 2022 and with additional DKK 2 000 from 2023, as compensation for increasing energy prices. With the increase, the maximum employment allowance is going from DKK 41 600 to DKK 43 500 in 2022, and from DKK 42 300 to DKK 44 300 in 2023.

The Finance Act of 2023 included an increase in the personal allowance for taxpayers under the age of 18 to the same level as adults from 2023. With the increase, the personal allowance for persons under the age of 18 is going from DKK 38 400 to DKK 48 000 from 2023.

## Memorandum Items

### ***Identification of an AW***

The AW is identified as an average worker employed at firms which are members of the Danish Employers' Confederation.

### ***Employer and employee's contribution to private schemes***

Employees typically participate in a private occupational (labour market) pension scheme to which both the employee and the employer contribute. The employee's contribution is deductible for income tax purposes until payment. The employer's contribution is not included in the gross wage income of the employee. The average pension payment is currently about 12,5 percent on average of the gross earnings.

## 2024 Tax equations

The equations for the Danish system in 2024 are mostly on an individual basis but there is an interaction in the calculation of Central Government tax between spouses and the child benefit is calculated only once. This is shown by the Range indicator in the table below.

The functions which are used in the equations (Taper, MIN, Tax etc) are described in the technical note about tax equations. Variable names are defined in the table of parameters above, within the equations table, or are the standard variables “married” and “children”. A reference to a variable with the affix “\_total” indicates the sum of the relevant variable values for the principal and spouse. And the affixes “\_princ” and “\_spouse” indicate the value for the principal and spouse, respectively. Equations for a single person are as shown for the principal, with “\_spouse” values taken as 0.

	Line in country table and intermediate steps	Variable name	Range	Equation
1.	Earnings	Earn		
2.	Allowances:	tax_al	B	Labour_market_contr+Pension_rate*earn
		earncredit	B	MIN(earncredit_rate*(earn/Pension_base_adjust),earncredit_max)+(Children>0)*(Married=0)*MIN((((earn/Pension_base_adjust))) *Sing_par_earncredit_rate, Sing_par_earncredit_max)+MIN(SINGLE(Positive((((AA7/Pension_base_adjust))))-Job_deduc_min))*Job_deduc_rate,Job_deduc_max)

		health_tax_cr_princ	P	0
		tax_cr_spouse	S	Married*(Personal_al*(Low_rate))
		health_tax_cr_spouse	S	0
	Labour Market Contribution	Labour_market_contr	B	Labour_market_rate*earn
7.	CG tax	CG_tax	B	Positive(CG_tax_excl-tax_cr)+ Labour_market_contr
8.	State and local taxes	local_tax_princ	P	Positive((Local_rates)*(tax_inc_princ-Personal_al-Married*Positive(Personal_al-tax_inc_spouse)))
		local_tax_spouse	S	(Local_rates)*Positive(tax_inc_spouse-Personal_al)
9.	Employees' soc security contributions	SSC_total	B	(earn>0)*DummyNTCP*(ATP_own)
10.	Total payments	tot_payments	J	Positive(CG_tax_total+local_tax_total+SSC_total)

	Line in country table and intermediate steps	Variable name	Range	Equation
11.	Cash transfers	cash_trans	J	$\text{SINGLE}(\text{Positive}(((\text{Children}>0)*\text{Child\_3to6} + (\text{Children}>1)*(\text{Children}-1)*\text{Child\_7to14}+((\text{Children}>0)*(\text{Married}=0)*(\text{Children}*(\text{Sing\_par\_basic})+\text{Sing\_par\_ch}))))-(\text{SINGLE}(\text{Positive}(\text{earn}-\text{Child\_limit}))*\text{Child\_red})-(\text{SINGLE}(\text{Positive}(\text{earn\_spouse}-\text{Child\_limit}))*\text{Child\_red}))) + (\text{Married}=0)*\text{SINGLE}(\text{Taper}(\text{MIN}(\text{Children\_1\_child};\text{child\_max});\text{AG6};\text{Green\_check\_thrsh};\text{Green\_check\_taper\_rate}))+(\text{Married}>0)*(\text{SINGLE}(\text{Taper}(\text{MIN}(\text{Children\_1\_child}/2;\text{child\_max}/2);\text{AR6};\text{Green\_check\_thrsh};\text{Green\_check\_taper\_rate}))+\text{SINGLE}(\text{Taper}(\text{MIN}(\text{Children\_1\_child}/2;\text{child\_max}/2);\text{AG6};\text{Green\_check\_thrsh};\text{Green\_check\_taper\_rate}))))$
13.	Employer's soc security	SSC_empr	B	$(\text{earn}>0)*(\text{SSC} + \text{DummyNTCP}*(\text{Samlet\_betaling}+\text{ATP\_employer}))$

Key to range of equation B calculated separately for both principal earner and spouse P calculated for principal only (value taken as 0 for spouse calculation) J calculated once only on a joint basis.

# Estonia

---

This chapter includes data on the income taxes paid by workers, their social security contributions, the family benefits they receive in the form of cash transfers as well as the social security contributions and payroll taxes paid by their employers. Results reported include the marginal and average tax burden for eight different family types.

Methodological information is available for personal income tax systems, compulsory social security contributions to schemes operated within the government sector, universal cash transfers as well as recent changes in the tax/benefit system. The methodology also includes the parameter values and tax equations underlying the data.

The Estonian currency is the Euro (EUR). In 2024, EUR 0.92 was equal to USD 1. In 2024, the average worker in Estonia earned EUR 23 930 (Secretariat estimate).

## Personal income tax system

### Central government income tax

#### *Tax unit*

The tax unit is the individual since January 1<sup>st</sup>, 2017.

#### *Tax allowances*

##### **Standard tax reliefs**

- A general (basic) allowance of EUR 7 848 is deductible from individual income in 2023. It starts declining from income of 14 400 and reaches EUR 0 at EUR 25 200. From 1 January 2017, the supplementary basic allowance for the spouse came into force. The spouse's yearly income must be below EUR 2 160 and the family's total yearly income must be below EUR 50 400. The spouse supplementary basic allowance was abolished from 1 January 2024.
- In 2023 a basic allowance at pensionable age was introduced, EUR 8448 per year. It applies to people who have reached or will reach pensionable age during the calendar year, regardless of the amount of the person's income. It increased to EUR 9312 in 2024.
- A child allowance of EUR 1 848 is also deductible from income for each of the second and EUR 3 048 for third any subsequent children up to and including the age of 16. It was abolished from 1 January 2024.
- Relief for social security contributions: Employee's compulsory contributions for unemployment insurance are deductible for income tax purposes.
- Tax credits: was abolished from 2017.

##### **Non – standard tax reliefs applicable to income from employment**

- II pillar pension contributions: In 2021, these represent compulsory payments to private funds for employees born in 1983 or after and are paid at a rate of 2% of earnings. In December 2020, these payments became wholly voluntary and will remain so until August 31, 2021. Only about 10 thousand employees stopped their payments. In 2021, different opt-out options were introduced, making the II pillar, in effect, voluntary. People have four basic options: 1. Continue as is; 2. The accumulated pension assets will be transferred to a special private investment account, the 2% and 4% payments will continue to that account, people will basically become their own second pillar pension fund investment manager; 3. Stop the payments into the pillar, existing assets remain invested in the fund, the person can opt in with their payments again after 10 years; 4. Stop the payments and take out assets (pay income tax), the person can opt in again after 10 years. New entrants to the labour market are automatically added to the second pillar but have the same opt-out options. About 149 000 persons younger than pension age chose to leave the scheme in 2021 and about 52 000 in 2022. Also pension age people, are leaving the scheme. In 2022 55% of resident employees made II pillar payments compared to 71% in 2021. In 2023-2024 it has stabilised at 53%. From 2025 people can increase their II pillar payment rate to 4% or 6%, state contribution will stay at 4%.

- Housing loan interest, educational costs, gifts and donations are deductible from taxable income within upper limits of EUR 1 200 and 50% of taxable income per year. Housing loan interest deductions upper limit is EUR 300 within that EUR 1 200 from 2017. It was abolished from 1 January 2024.
- Voluntary pension contributions (III pillar): Contributions paid by a resident to the provider of a pension plan based in Estonia or in another EU Member State according to a pension plan that is approved and entered into a special register in accordance with the pension legislation are deductible from taxable income. In 2024 such deductions are subject to an annual limit of a sum equal to 15% and maximum of EUR 6 000 of the employee's, public servant's or members of legal person management or control body income in a calendar year.

### *Tax schedule*

The rate of 20% applies for all levels of taxable income.

### **Regional and local income tax**

There are no regional or local income taxes.

## **Compulsory social security insurance system**

The compulsory social security insurance system consists of three schemes as follows:

- pension insurance;
- health insurance;
- unemployment insurance.

### **Employees' contributions**

Employees pay 1.6% of their earnings in contributions for unemployment insurance. The taxable base is the total amount of the gross wage or salary including vacation payments, fringe benefits and remuneration of expenses related to work above a certain threshold. The assessment period is the calendar month.

### **Employers' contributions**

Social security insurance contributions are also paid by employers on behalf of their employees. The taxable base and the assessment period are the same as for employees' contributions. The employers' contribution rates are applied in two parts:

- Unemployment insurance – 0.8% of employee earnings.
- Pension and health insurance – as follows for monthly earnings above EUR 725.

Scheme name	Rate of contribution (%)
Pension insurance	20.00
Health insurance	13.00
Total	33.00

In addition there is a lump sum payment for each employee of EUR 239,25 per month (split between pensions and health insurance on a 20:13 basis).

## Payroll tax

None.

## Universal cash transfers

### *Transfers related to marital status*

None.

### *Transfers for dependent children*

Estonia's family benefits are designed to provide partial coverage of the costs families incur in caring for, raising and educating their children.

The state pays family benefits to all children until they reach the age of 16. Children enrolled in basic or secondary schools or vocational education institutions operating on the basis of basic education have the right to receive family benefits until the age of 19. Applications for the allowance are made on an annual basis and the payments are not taxable. The values of these benefits in 2024 are shown in the table below. The single parent child allowance is paid for each child. From 1<sup>st</sup> of July 2017 the parents allowance for families with three to six children was introduced, EUR 300 per month, in 2023 it was increased to EUR 650 per month and decreased to EUR 450 in 2024. Parents allowance for families with seven or more children was increased from EUR 168.74 per month to EUR 400 per month from 1<sup>st</sup> of July 2017, in 2023 it was increased to EUR 850 per month and decreased to EUR 650 in 2024.

In addition, there are nine other types of family benefits for which payment depends on either the age of the child(ren) and/ or the status of the person(s) looking of them: parental benefit; additional parental benefit for fathers and 30 days of paternity leave, childbirth allowance and allowance for multiple birth of three or more children; maintenance allowance, conscript's child allowance; adoption allowance (single payment), guardianship allowance, child care allowance. These are not included in the modelling.

Type of benefit	Annual amount of benefit (in EUR)
Child allowance (paid until children turn 16 or until the end of the academic year in which they turn 19 if they continue studying).	
- For the first and second child	960.00
- For the third and any subsequent children	1 200.00
- Single parent's child allowance	960
- Parents allowance for families with three to six children	5 400.00
- Parents allowance for families with seven or more children	7 800.00

In addition to existing benefits, from 1<sup>st</sup> of July, 2013 the need-based child benefits were introduced. Need-based family benefit income threshold was based on Statistical Office relative poverty threshold published by the 1<sup>st</sup> of March in a year before current budget year. In 2017 the need based threshold was EUR 394 in a month for the first household member. For every other at least 14-years old member the threshold was EUR 197 and for the younger members EUR 118.2 in a month. Need-based family benefit was in 2017 EUR 45 in a month for single child family and EUR 90 for families with two or more children. These need-based benefits were abolished from 2018.

## Main changes in tax/benefit system since 2005

- The personal income tax rate was steadily reduced from 24% in 2005 to 21% in 2008. In 2015 it was reduced to 20%.
- The child tax allowance applied for the third and subsequent children for 2005 and the second and subsequent children in 2006 and 2007. It applied to all children in 2008 and then returned to the 2007 position in 2009.
- The employee unemployment contribution rate was reduced from 1% to 0.6% in 2006 and then raised in 2 stages to 2.8% at the end of 2009. The corresponding rates for employers were a reduction from 0.5 % to 0.3% in 2006 increasing to 1.4%. In 2013 the employee unemployment contribution rate was reduced from 2.8% to 2.0% and the corresponding rate for employers from 1.4% to 1.0%. In 2015 the employee unemployment contribution rate was reduced from 2.0% to 1.6% and the corresponding rate for employers from 1.0% to 0.8%.
- In addition to existing benefits, from 1<sup>st</sup> of July 2013, the need-based child benefits were introduced. Further details in the section on cash transfers. These were abolished from 2018.
- From 2016, a non-payable tax credit for low-income earners (“madalapalgaliste tagasimakse”) was introduced. Further details in the Tax allowances section. It was abolished from 2017.
- From 2017 the possibility to use spouse’s basic tax-free allowance was reformed. From 1<sup>st</sup> of January 2017, the supplementary basic allowance for the spouse came into force. The spouse’s yearly income must be below EUR 2 160 and the family’s total yearly income must be below EUR 50 400.
- From 2020 the additional child allowance for third any subsequent children up to and including the age of 16 was increased to EUR 3 048 per year.
- From 2023 the single parent’s child allowance and child allowance for the first and second child was increased to EUR 960 per year, parents allowance for families with three to six children to EUR 7 800 and parents allowance for families with seven or more children to EUR 12 200 per year.
- From 2024 parents allowance for families with three to six children was decreased to EUR 5 400 and parents allowance for families with seven or more children to EUR 7 800 per year.

## Memorandum items

### ***Average gross annual wage earnings calculation***

In Estonia the gross earnings figures cover wages and salaries paid to individuals in formal employment including payment for overtime. They also include bonus payments and other payments such as pay for annual leave, paid leave up to seven days, public holidays, absences due to sickness for up to 30 days, job training, and slowdown through no fault of the person in formal employment. Since the first quarter of 2023, Statistics Estonia uses the data from the employment register of the Tax and Customs Board and the income and social tax declarations to publish the average wages and salaries. People working under employment contracts, the Civil Service Act (*excluding employees in the areas of governance of the Ministry of Defence and the Ministry of the Interior*), and service contracts are included.

The average gross wage earnings figures of all adult workers covering industry sectors B–N by NACE Rev.2 are estimated with average wage growth rate forecast of OECD. ~~Estonian Ministry of Finance.~~

***Employer contributions to private pension and health schemes***

Some employer contributions are made to private health and pension schemes but there is no relevant information available on the amounts that are paid.

## 2024 Parameter values

Days in tax year	numdays	365	

## 2024 Tax equations

The equations for the Estonian system are mostly on an individual basis.

The functions which are used in the equations (Taper, MIN, Tax etc) are described in the technical note about tax equations. Variable names are defined in the table of parameters above, within the equations table, or are the standard variables “married” and “children”. A reference to a variable with the affix “\_total” indicates the sum of the relevant variable values for the principal and spouse. And the affixes “\_princ” and “\_spouse” indicate the value for the principal and spouse, respectively. Equations for a single person are as shown for the principal, with “\_spouse” values taken as 0.

	Line in country table and intermediate steps	Variable name	Range	Equation
1.	Earnings	earn		
2.	Allowances:	tax_al	P	MINA(Positive(Basic_al-(Positive(earn-Basic_al_thrs_1)*(Basic_al/(Basic_al_thrs_2-Basic_al_thrs_1)))))+IF(spouse_earn<Suppl_al,IF(AND(household_earn<income_lim,Married>0),Positive(Suppl_al-spouse_earn),0),0)+SSC_empee+(Children>1)*(Child_al*(Children-1)),earn)
			S	MINA(IF(earn>0,Positive(Basic_al-(Positive(earn-Basic_al_thrs_1)*(Basic_al/(Basic_al_thrs_2-Basic_al_thrs_1))))),0)+SSC_empee,earn)
3.	Credits in taxable income	taxbl_cr	B	0
4.	CG taxable income	tax_inc	B	Positive(earn-tax_al)
5.	CG tax before credits	CG_tax_excl	B	Tax_inc*tax_rate
6.	Tax credits :	tax_cr	B	0
7.	CG tax	CG_tax	B	CG_tax_excl

The national currency is the Euro (EUR). In 2024, EUR 0.92 was equal to USD 1. In that year, the average worker earned EUR 52 893 (Secretariat estimate).

## Personal Income Tax System

### **Central government and municipal income taxes**

#### *Tax unit*

Spouses are taxed separately for earned income.

#### *Standard tax allowances and tax credits*

##### **Standard reliefs**

- **Work-related expenses:** A standard deduction for work related expenses equal to the amount of wage or salary, with a maximum amount of EUR 750 is granted.
- **Tax credit:** An earned income tax credit is granted against the central government income tax. If the credit exceeds the amount of central government income tax, the excess credit is deductible from the municipal income tax and the health insurance contribution for medical care. The credit is calculated on the basis of taxpayers' income from work. The credit is 12 percent of the amount of income in question. However, the maximum amount of the deduction is EUR 2 140. The amount of the credit is reduced by 2.03% for the portion of net earned income exceeding EUR 23 420. To the extent that the taxpayer's net earned income exceeds 71 900 euros, the amount of the credit is reduced by 1.21 percent for the exceeding amount. The credit is fully phased out when taxpayers' income is about EUR 168 000.
- **An earned income tax allowance** is calculated on the basis of taxpayer's income from work. The allowance amounts to 51% of income between EUR 2 500 and EUR 7 230 and 28% of the income exceeding EUR 7 230, until it reaches its maximum of EUR 3 570. The amount of the allowance is reduced by 4.5% on earned income minus work related expenses exceeding EUR 14 000.
- **A basic tax allowance** is granted on the basis of taxable income remaining after the other allowances have been subtracted. The maximum amount, EUR 3 980, is reduced by 18% on income exceeding the aforementioned amount.

##### **Main non-standard tax reliefs applicable to an AW**

- **Membership fees:** Membership fees paid to employees' organisations or trade unions.
- **Travelling expenses:** Travelling expenses from the place of residence to the place of employment using the cheapest means in excess of EUR 900 up to a maximum deduction of EUR 7 000.
- **Double housing expenses:** If the place of employment is located too far from home in order to commute (distance > 100km), the taxpayer can deduct the costs of hiring a second dwelling located near the place of work up to EUR 450 per month. This deduction can be claimed only by one person per household.
- **Other work-related outlays:** Outlays for tools, professional literature, research equipment and scientific literature, and expenses incurred in scientific or artistic work (unless compensated by scholarships).

Travelling expenses and other work related outlays are deductible only to the extent that their total amount exceeds the amount of the standard deduction for work related expenses.

### *Rate schedule*

Central government income tax:

Taxable income (EUR )	Tax on lower limit (EUR )	Tax on excess income in bracket (%)
0-20 500	0	12.64
20 500-30 500	2 591.2	19
30 500-50 400	4 491.2	30.25
50 400-88 200	10 510.95	34
88 200-150 000	23 362.95	42
150 000-	49 318.95	44

### **Local income tax**

#### *Tax base and tax rates*

The tax base of the local income tax is taxable income as established for the income tax levied by central government.

Municipal tax is levied at flat rates. In 2024 the tax rate varies between 4.4 and 10.8%, the average rate being approximately 7.46%.

Municipal tax is not deductible against central government taxes.

## **Compulsory Social Security Contributions to Schemes Operated within the Government Sector**

### **Employee contributions**

#### *Rate and ceiling*

In 2024, the rate of the health insurance contribution for medical care paid by an employee is 0.51%. The tax base for this contribution is net taxable income for municipal income tax purposes.

In addition, there is an employees' pension insurance contribution that amounts to 7.15% of gross salary, an employees' unemployment insurance contribution equal to 0.79% of gross salary and a health insurance contribution for daily allowance equal to 1.01% of gross salary exceeding € 16 499 (0.00 % on income less than € 16 499). For employees aged 53 to 62, the pension insurance contribution amounts to 8.65% of gross salary. These contributions are deductible for income tax purposes.

#### *Distinction by marital status or sex*

The rates do not differ.

## ***Employers' contributions***

The average rate of the employers' social security contribution in 2024 is 19.95% of gross wage.

	Contribution rates (%)
Health insurance	1.16
Unemployment insurance (avg)	0.82
Earnings-related pension insurance	17.34
Accident insurance (avg)	0.57
Group life insurance (avg)	0.06
Total	19.95

## **Universal Cash Transfers**

### ***Amount for marriage***

None.

### ***Amount for children***

The central government pays in 2024 the following allowances (EUR):

For the first child	1 138.56
For the second child	1 258.08
For the third child	1 605.48
For the fourth child	2 078.88
Fifth and subsequent child	2 312.28

The child subsidy for a single parent is increased by an annual amount of EUR 879.60 for each child. The child subsidy is also increased by a monthly amount of EUR 26 for each child under 3 years of age.

## **Main Changes in the Tax/Benefit System since 2023**

Adjustments for inflation and rise of earnings levels were made to the central government tax scale in 2024. The government however decided to implement a tax increase corresponding to a 0.2% reduction in the unemployment insurance contribution, which was done by reducing the index used in the adjustments of income taxation.

A new top bracket for income exceeding EUR 150 000 was introduced to the central government income tax scale.

The maximum amount of the basic allowance in municipal taxation was raised from EUR 3 870 to EUR 3 980. The maximum amount of the earned income tax credit in state taxation was raised from EUR 2 030 to EUR 2 140.

The rates of child benefits paid to families with four or more children were increased. The amount of child benefit paid for a family's fourth child was increased by EUR 10, making the total amount EUR 173.24 per month. The amount of child benefit paid for the fifth child and each child after that was also increased by EUR 10 to EUR 192.69 per month. The child benefit paid for children under three was increased by EUR 26.

The single-parent supplement to the child benefit was increased from its previous amount of EUR 5 per month to EUR 73.30 per month.

## Memorandum Items

### ***Calculation of average gross annual wage***

The Finnish figures are generally calculated as follows:

- Gross annual earnings are calculated at an individual level on the basis of the hour's usually worked, average hourly pay for the fourth quarter, and the share of annual periodic bonuses.
- The earnings exclude sickness and unemployment compensations, but include all normal overtime compensations, bonuses, holiday remunerations and remunerations for public holidays.

### ***Employer contributions to private pension and health schemes***

No information is available.

	Total tax wedge: Spouse	44.0%	64.6%	58.2%	62.7%

The national currency is the Euro (EUR). In 2024, EUR 0.92 equalled USD 1. In that year, the average worker earned EUR 44 968 (Secretariat estimate).

## Personal income tax system

### ***Tax levied by the central government on 2024 income***

#### *Tax unit*

The tax unit is aggregate family income, but children over 18 are included only if their parents claim them as dependants. Other persons may be fiscally attached on certain conditions: unlike spouses, who are always taxed jointly, children over 18 and other members of the household may opt to be taxed separately. Beginning with the taxation of 2004 income, the law provides for joint taxation of partners in a French civil union (pacte civil de solidarité, or PACS), as soon as the PACS is signed. Reporting obligations for “PACSeD” partners are similar to those of married couples.

Earned income is reported net of compulsory employer and employee payroll deductions, except for 2.4 percentage points worth of CSG (contribution sociale généralisée) and the 0.5% CRDS (contribution pour le remboursement de la dette sociale), which are not deductible from the income tax base.

#### *Tax reliefs and tax credits*

##### **Standard tax reliefs**

- Work-related expenses, corresponding to actual amounts or a standard allowance of 10% of net pay (with a minimum of EUR 495 and a ceiling of EUR 14 171 per earner).
- Family status: The “family quotient” (quotient familial) system takes a taxpayer’s marital status and family responsibilities into account. It involves dividing net taxable income into a certain number of shares [two shares for a married (or “PACSeD”) couple, one share for a single person, one half-share for each dependent child, an additional share for the third and each subsequent dependent child, an additional half-share for single parent, and so on]: the total tax due is equal to the amount of tax corresponding to one share multiplied by the total number of shares. The tax benefit for a half-share is limited, however, to EUR 1 759 per half-share in excess of two shares for a couple, or one share for a single person, except for the first two half-shares granted for the first child of a single parent, in which case the maximum benefit is EUR 4 149.

##### **Main non-standard reliefs available to the average worker**

There are compensatory allowances in case of divorce if paid in a lump sum (25% reduction, capped at EUR 30 500); home employment costs (child care, home help, housekeeper...) (50% reduction up to annual expenditure of EUR 12 000 with additional EUR 1 500 per dependent), child care costs for children under six (50% reduction, up to annual expenditure of EUR 2 300); dependent children attending secondary school or in higher education; donations to charities or other organisations assisting those in needs; trade union dues, etc. The exemption of the employer’s participation to the collective contracts of supplementary health cover is abolished in the budget act for 2014 (i.e., income earned in 2013).

### *Tax schedule*

	Fraction of taxable income (1 share, in Euros)	Rate (in %)
1 <sup>st</sup> bracket	Up to 11 294	0
2 <sup>nd</sup> bracket	From 11 295 to 28 797	11
3 <sup>rd</sup> bracket	From 28 798 to 82 341	30
4 <sup>th</sup> bracket	From 82 342 to 177 106	41
5 <sup>th</sup> bracket	From 177 107	45

The tax schedule for 2024 has been adjusted for inflation in the 2025 budget bill. Yet, due to the late adoption of the 2025 budget bill, the indexation of the tax schedule and income tax parameters to inflation (1.8 %) could not be incorporated into the *Taxing Wages* model. This results in higher estimated tax rates than those effectively in force.

A special rebate for taxpayers with a low tax liability is applied to the amount of tax resulting from the above schedule before reductions and tax credits. To be eligible, the tax on the household's income must be less than EUR 1 928 for single households and less than 3 190 for couples. The rebate is equal to 45.25 % of the difference between this ceiling and the amount of tax before the rebate.

### *Exceptional contribution on high revenues*

An exceptional contribution on high revenues is based on the reference taxable income ("revenu fiscal de référence"). The tax rates are 3% from EUR 250 000 to EUR 500 000 (single person), 4% over EUR 500 000 (single person), 3% from EUR 500 000 to EUR 1 000 000 (married couple or civil union) and 4% over EUR 1 000 000 (married couple or civil unions).

### ***Taxes levied by decentralised authorities***

Local taxes levied on working households are:

- Residency tax ("taxe d'habitation") on secondary homes apply at rates set by local authorities.
- Property taxes on developed and undeveloped land.
- There are common rules for each type of tax, to which certain municipalities make certain adjustments.

These local taxes, the rates of which vary widely, depending on the municipality, are not assessed here.

### ***Universal social contribution (contribution sociale généralisée, or CSG)***

The universal social contribution (CSG) was introduced on 1 February 1991. Since 1 January 2018, the rate of CSG has been 9.2%. This rate has been applied to a base of 98.25% as of 1st January 2012. The CSG is deductible against taxable income, but at a lower rate of 6.8%.

### ***Contribution to the reimbursement of social debt (contribution au remboursement de la dette sociale, or CRDS)***

The contribution to the reimbursement of social debt has been in effect since 1 February 1997. Like the universal social contribution, its base has passed to 98.25% of gross pay as of 1st January 2012. The rate is set at 0.5%. Unlike social security contributions, CRDS payments are not deductible from taxable income.

## Compulsory social security contributions to schemes operated within the government sector.

Some contributions are levied on a capped portion of monthly earnings. Since 1997, this ceiling has been adjusted once a year on 1 January. The ceiling remained stable in 2020, 2021 and 2022 at EUR 3 428 (or EUR 41 136 per year). It increased in January 2023, at EUR 3 666 (or EUR 43 992 per year), corresponding to a 6.9% increase on the 2022 level. In January 2024, the ceiling is at EUR 3 864 (or EUR 46 368 per year), corresponding to a 5.4% increase on the 2023 level.

### **Employee contributions**

#### *Pension*

- 6.9% on earnings up to the ceiling (unchanged compared to 2023).
- 0.4% on total earnings (unchanged compared to 2023).

#### *Illness, pregnancy, disability, death*

- 0.0% on total earnings (0.0% in 2021)

#### *Unemployment*

- 0.0% on earnings since 1<sup>st</sup> October 2018.

#### *Others*

- Supplemental pension<sup>1</sup> for non-managers and managers: minimum 3.15% up to the ceiling and 8.64% between one and eight times the ceiling.
- The CEG ("Contribution d'Équilibre Général") replaced AGFF and GMP in 2019. The rate of this contribution is, for non-managerial workers and managers, 0.86% of earnings up to the social security ceiling and 1.08% between one and eight times the ceiling.
- The CET ("Contribution d'Équilibre Technique"): a contribution of 0.14% on total earnings up to eight times the ceiling, for employees whose earnings exceed one time the ceiling.

### **Employer contributions**

#### *Pensions*

8.55% (unchanged compared to 2023) of gross pay, up to the ceiling, plus a 2.02% (1.90% in 2023) levy on total pay.

#### *Illness, pregnancy, disability, death*

13.0% of total earnings (unchanged compared to 2023). The rate has been reduced to 7.0% up to 2.5 times the minimum wage since 1<sup>st</sup> January 2019 with the conversion of the CICE into a permanent cut in social contributions. In 2024, the ceiling for the reduction is set at 2.5 times the minimum wage applicable on 31 December 2023 (which corresponds approximately to 2.47 times the minimum wage applicable on 1 January 2024).

An additional contribution of 0.3% (contribution de solidarité autonomie – CSA) is levied on total salary.

### *Unemployment*

4.05% of earnings (unchanged compared to 2023) (4.55% for some temporary contracts and between 3 % and 5.05% for some companies), up to four times the ceiling; in addition, 0.20% (0.15% in 2023) up to four times the ceiling to endow the salary guarantee fund (AGS).

### *Work-related accidents*

Contribution rates for work-related accidents vary by line of business and are published annually in the official gazette (Journal officiel de la République française). In 2024, the average rate is 2.12% (after 2.24% in 2023).

### *Family allowances*

5.25% of total pay. The rate has been reduced to 3.45% up to 1.6 times the minimum wage from 2015 with the responsibility pact, up to 3.5 times the minimum wage from April 2016. In 2024, the ceiling for the reduction is set at 3.5 times the minimum wage applicable on 31 December 2023 (which corresponds approximately to 3.46 times the minimum wage applicable on 1 January 2024).

### *Others*

- Supplemental pension: for non-managers and managers, 4.72% up to the ceiling and 12.95% between one and eight times the ceiling.
- The CEG (“Contribution d’Équilibre Général”) contribution is 1.29% up to the ceiling, 1.62% between one and eight times the ceiling for managers and non-managers. In the table, this is combined with the rates for supplemental pensions.
- The CET (“Contribution d’Équilibre Technique”), a contribution of 0.21% on total earnings up to eight times the ceiling for employees whose earnings exceed one time the ceiling.
- Others (construction, housing, apprenticeship, further training): 2.646% of pay (for enterprises with more than 20 employees). The transport tax is not included because it varies geographically. Contributions to finance a fund dedicated to workers exposed to distressing work conditions (“Fonds Pénibilité”) vary with the levels of exposure of each worker and are therefore not included.

### *Reduction of employer-paid social insurance contributions*

The reduction of employer-paid social insurance contributions, introduced in 1993, has been gradually extended and strengthened. As of 2023, it includes two types of measures:

- (i) The general reduction of employer-paid social insurance (ex-“Fillon Act”, also called today “zero contributions URSSAF”) is a decreasing reduction in social security contributions, which eliminates all common law social contributions paid at the minimum wage and whose level decreases with wage to become zero for a gross annual wage equal to 1.6 times the gross annual minimum wage. It applies irrespective of the number of hours worked for workers with contracts of at least three months. Since 1<sup>st</sup> of January 2024, the maximum reduction is 32.34% for companies with more than 50 employees. For companies with less than 50 employees, it is 31.94% since 1 January 2024.
- (ii) A proportional reduction in health insurance and family allowance contributions, which allow for a reduction of 6 and 1.8 percentage points respectively for gross annual wage below 2.5 and 3.5 times the gross annual minimum wage. In 2024, the ceiling of the two reductions was frozen at the level of the minimum wage applicable on 31 December 2023. The 6 percentage point reduction replaces since 1<sup>st</sup> January 2019 the competitive tax credit (CICE – *crédit*

*d'impôt pour la compétitivité et l'emploi*), whereas the 1.8 percentage point reduction was introduced in 2015 by the Responsibility Act (Phase 1).

The gross annual minimum wage (for 1 820 hours) is at EUR 21 203 since January 1<sup>st</sup> 2024.

## Universal cash transfers

### **Main minimum social benefits**

The RSA (“Revenu de Solidarité Active”) is the minimum income benefit. However, the eight family types studied here earn too high an income to benefit from this benefit.

### **Main family benefits (in respect of dependent children)**

Family allowances: the monthly base for family allowances (BMAF) was equal to EUR 445.93 between January 1<sup>st</sup> and end of March 2024. It was automatically adjusted on 1 April 2024 to EUR 466.44445.93.

- The family allowances, granted to families with two or more children, are subject to revenue conditions since 1 July 2015, and adjusted every year:
  - Up to EUR 74 966(+EUR 6 246 per child after the second child), the rate is 32% for two children and 41% per additional child. An extra amount of 16% of the BMAF is reversed if the child is over 14 years old (the extra amount is not incorporated into the model).
  - Between EUR 74 966 (+EUR 6 246 per child after the second child) and EUR 99 922 (+EUR 6 246 per child after the second child), the above rates are divided by 2.
  - Beyond EUR 99 922 (+EUR 6 246 per child after the second child), the above rates are divided by 4.
- ASF (Allocation de Soutien Familial): extra child benefit for isolated parent is at most 42.20 % of the BMAF per month, against 28.13% in 2022. It is reduced by the amount of child support paid by the other parent to the family.
- ARS (Allocation de Rentrée Scolaire): The amount payable depends on the age of the child to reflect needs. The allowance is payable to families or persons with children aged 6 to 18 attending school, and whose income is below a certain level (not incorporated into the model).

Age of the child	Percentage of the BMAF in 2024
6–10 years	89.72%
11–14 years	94.67%
15–18 years	97.95%

- Family supplement (Complément Familial): 41.65% of the BMAF. Subject to revenue ceilings, this is paid to families as of the third child aged between 3 and 21. An extra amount (20.83% of BMAF) is reversed for families whose incomes are below a given threshold. The family supplement is not incorporated into the model.
- Early childhood benefit (not incorporated in the model) known as PAJE (Prestation d’Accueil du Jeune Enfant): subject to revenue ceilings. It includes:
  - A birth grant of 229.75% of the BMAF received at the 2nd month following the birth.
  - A grant of 459.5% of the BMAF is received upon the adoption of a child.
  - A benefit (“allocation de base”) of 41.65% (or 20.825% depending on the family income) of the BMAF a month from the birth of the child until three years of age.

## ***Housing benefits***

The housing benefits are not included in the model.

## ***In-work benefit***

The November 2014 Supplementary Budget Act eliminated the earned income tax credit (Prime pour l'emploi, PPE) so that it could be merged with the in-work income supplement (RSA Activité) and become a single in-work benefit. The in-work benefit was created by the Act of 17 August 2015 on Labour-Management Dialogue and Employment, and has been in place since 1 January 2016. The in-work benefit is better targeted to promote a return to full-time work for low-paid workers. The benefit is not paid if its monthly amount is less than EUR 15.

The amount of in-work benefit is equal to a targeted income, less the maximum between resources and a lump sum. The lump sum ('montant forfaitaire de la prime d'activité') was equal to EUR 595.25 from 1 January 2024 to 1 April 2024, it then increased to EUR 622.63.

The targeted income is determined as the sum of three elements:

- A lump sum (before CRDS) modulated according to the composition of the household. For instance, it is increased by 50% for couple, then 30% for each child until two and 40% for each additional child. The amount may be increased for a temporary period<sup>2</sup> for an isolated parent (128.412% of the basic lump sum for the adult and then 42.804% for each child).
- An individual bonus of 29.101% of the basic lump sum is planned for persons whose net income exceeds around 100% of the net minimum wage; this bonus grows linearly if the net income is between around 50% and 100% of the net minimum wage<sup>3</sup>.
- 61% of the net professional income of the household.

Then resources are assessed as the sum of the household income, plus the benefits (family benefits and others, except RSA and housing benefits)<sup>4</sup>. A lump sum depending on the composition of the household (12% of the basic lump sum for a single person, 16% for a couple, 16.5% for three persons or plus) is used to take into account the housing benefits<sup>5</sup>.

## **Main changes in the tax system and social benefits regime since the taxation of 2015 income**

- Tax system (2020 income)
  - New tax schedule following the personal income tax reform (Budget Act 2020):
 

The Budget Act of 2020 (article 2) introduced a reform of the personal income system. The reform provides a significant lowering of income tax rate for an amount of around 5 billion euros. 16.9 million taxpayers are benefitting from this reduction from the 1<sup>st</sup> January, for an estimated average gain of around EUR 300. The changes are the following:

    - the marginal rate of 14% is reduced at 11%.
    - the tax rebate is reduced from three quarters to 45.25%.
    - the special 20% tax reduction rate is removed.

If the final tax is less than EUR 61, no tax is payable.
- Increase of 1.7 points of CSG deductible (2018)
- Social benefits regime

- Increased reduction of employer-paid contributions for family allowance: 3.45% instead of 5.25% for salary up to 3.5 times the minimum wage from April 2016 (1.6 times before).
- Removal of sickness and unemployment employee contribution
- Creation of a new cash transfer benefit for low-income workers (“prime d’activité”) which replace the PPE and the “RSA activité”<sup>6</sup>.

### ***Changes to labour taxation in 2024***

**In August 2022, the French Parliament adopted the permanent raise of overtime pay exemption ceiling** from EUR 5 000 to EUR 7 500 for income tax only, applicable from 2023 (tax on 2022 income).

**The exceptional bonus scheme introduced in 2018** (“Prime Exceptionnelle de Pouvoir d’Achat”) **was replaced in July 2022 by a permanent value-sharing bonus scheme** (“**Prime de Partage de la Valeur**”) with new conditions valid until December 2023. **In November 2023, the law transposing the national interprofessional agreement on value sharing within the company introduced new conditions, which apply between January 2024 and December 2026, before the permanent scheme comes into effect from January 2027 onwards.** The scheme is thus implemented in three phases:

- From July 2022 to December 2023, value-sharing bonuses could be paid once a year with a limit of EUR 3 000 (EUR 6 000 in the case of the signature of a profit-sharing agreement). Under this phase of the scheme, tax exemptions varied depending on the employee’s salary. For employees earning less than 3 times the minimum wage, the payment of a value-sharing bonus was exempt from employers’ and employees’ social contributions – including “Contribution sociale généralisée” (CSG) and “Contribution pour le remboursement de la dette sociale” (CRDS), income tax and the additional employer social contribution (“forfait social”). For employees earning at least 3 times the minimum wage, the exemption from social contributions did not cover the CSG and CRDS, and an additional employer social contribution (“forfait social”) applied to companies with 250 employees or more (20 % of the bonus). If applicable, income tax must also be paid.
- From January 2024 to December 2026, value-sharing bonuses can be paid twice a year, with a total limit of EUR 3 000 (EUR 6 000 in the case of the signature of a profit-sharing agreement). The previous exemption was extended within firms employing less than 50 employees – in these firms, for employees earning less than three times the minimum wage, the payment of a value-sharing bonus is exempt from employers’ and employees’ social contributions – including CSG and CRDS – and from income tax. For all other employees (employees working in firms employing more than 50 workers or employees working in firms employing less than 50 workers and earning three times the minimum wage or more), the regime of the scheme is aligned with another value-sharing scheme (profit-sharing - “intéressement”). The bonus is exempt from employers’ and employees’ social contributions but not from CSG and CRDS. Moreover, companies employing 250 workers or more are liable to pay an additional employer social contribution (“forfait social”) on bonuses paid to all employees (20 % of the bonus). Bonuses are subject to income taxation, except if saved in an employee or retirement savings plan.
- A permanent scheme will be applicable from 2027 onwards for all employees. Value-sharing bonuses will be exempt from social security contributions – except CSG and CRDS – and liable to pay the “forfait social” (20 % of the bonus for firms employing 250 workers or more). Bonuses will be subject to income tax, except if saved in an employee or retirement savings plan.

*The value-sharing bonus scheme is not taken into account in the model as it is not mandatory for employers to use it.*

**Moreover, the 2023 law transposing the national interprofessional agreement on value sharing within the company also made it mandatory for all firms employing between 11 workers and 50**

**workers<sup>7</sup> to establish a profit-sharing scheme when making lasting profits.** From 2025 onwards, firms achieving a net fiscal profit of at least 1 % of their turnover for three consecutive years will have to establish a profit-sharing scheme – employers may choose which one among the existing schemes, including the value-sharing bonus.

Summary table: the socio-fiscal regime of the value-sharing bonus ("PPV")

	Affected employees	Subject to employers' and employees' social contributions	Subject to CSG <sup>1</sup> and CRDS <sup>2</sup>	Subject to the additional employer social contribution ("forfait social")	Subject to income tax
July 2022 – December 2023	Employees earning less than 3 times the minimum wage	No	No	No	No
	Employees earning more than 3 times the minimum wage	No	Yes	Only in firms employing 250 workers or more (20 %)	Yes
January 2024 – December 2026	Employees earning less than 3 times the minimum wage within firms employing less than 50 workers	No	No	No	No
	Employees earning more than 3 times the minimum wage within firms employing less than 50 workers	No	Yes	No	Yes <sup>3</sup>
	Employees within firms employing more than 50 workers	No	Yes	Only in firms employing 250 workers or more (20 %)	Yes <sup>3</sup>
January 2027 onwards	All employees	No	Yes	Only in firms employing 250 workers or more (20 %)	Yes <sup>3</sup>

<sup>1</sup> "Contribution sociale généralisée"

<sup>2</sup> "Contribution pour le remboursement de la dette sociale"

<sup>3</sup> Value-sharing bonuses are exempt from income tax when saved in an employee or retirement savings plan

## Memorandum items

To assess the degree of comparability between countries, the following additional information should be taken into account:

- Coverage is of the private and semi-public sectors of NACE sections C to K up to 2007 and NACE rev.2 sections B to N from 2008.
- The category “employees” encompasses all full-time dependent employees (excluding apprentices and interns).
- The figures presented are obtained by applying income tax and social contribution scales to gross salaries as listed in annual social data reports (DADS) in NACE.

There is a break in the average wage time-series starting with the year 2016. That year, the National Statistics Office (INSEE) changed their methodology for the calculations of the average wage.

Additionally, the 2020 annual average wage decreased compared to previous years due to the exceptional use of Covid STW schemes in 2020. Indeed, Covid STW schemes led to the substitution of unemployment benefits to wages for workers benefitting from such schemes while contract duration includes periods of STW during which the contract is only suspended. Therefore, the annualised average wage which is computed as the ratio of wages to contract length that year declined by 3.7 % between 2019 and 2020. The OECD series of compensation per employee used as a proxy to forecast the 2024 average wage (2024 forecast is obtained by applying to the latest level published by Insee, which refers to year 2022, the evolution rates published by OECD for years 2023 and 2024) decreased as well in 2020 for the same reason, although to a slightly lesser extent: compensation per employee declined by 3.5 % in 2020 followed by a rebound in 2021, 2022 and 2023 by 4.9 %, 4.9 % and 4.1 % respectively. The discrepancy between the variation in the INSEE series of average wage and the variation in the OECD series of compensation per employee in 2020 (i.e., 0.2 percentage point) can be regarded as standard compared to historical differences between these two times series<sup>1</sup>. Therefore, the usual methodology is kept unchanged: the 2024 average wage value is derived from the INSEE 2022 average wage level and evolutions in the OECD compensation per employee series in 2023 and 2024. No specific correction has been brought to forecast in order to take into account the difference between these two series for 2020 since this difference is not particularly important compared to what is observed in other years.

## 2024 Tax equations

The equations for the French system are mostly calculated on a family basis. Variable names are defined in the table of parameters above, within the equations table, or are the standard variables “married” and “children”. A reference to a variable with the affix “\_total” indicates the sum of the relevant variable values for the principal and spouse. And the affixes “\_princ” and “\_spouse” indicate the value for the principal and spouse, respectively. Equations for a single person are as shown for the principal, with “\_spouse” values taken as 0.

	Line in country table and intermediate steps	Variable name	Range	Equation
1.	Earnings	Earn		
	Quotient for tax calculation	Quotient	J	$1 + \text{Married} + \text{IF}(\text{Children} < 3, \text{Children}/2, \text{Children} - 1) + 0.5 * (\text{Married} = 0) * (\text{Children} > 0)$
2.	Allowances			
	CSG deductible	CSG_ded	B	$\text{CSG\_rat\_ded} * ((1 - \text{CSG\_CRDS\_abat}) * \text{MIN}(\text{earn}; 4 * \text{SSC\_ceil}) + \text{Positive}(\text{earn} - 4 * \text{SSC\_ceil}))$
	Salary net	earn_dec	B	$\text{earn} - \text{SSC} - \text{CSG\_ded}$
	Work related	work_exp	B	$\text{MIN}(\text{work\_rel\_ceil}, \text{MAX}(\text{work\_rel\_rate} * \text{earn\_dec}, \text{MIN}(\text{work\_rel\_fl}, \text{earn\_dec})))$

13.	Employer's soc security	SSC_empr_gross	B	(CSA + pens_empr2 + accidents_empr+others_empr)*earn + pens_empr1*MINA(earn;SSC_ceil) + pens_empr_ex*MINA(earn;SSC_ceil) + pens_empr_ex2* MAX(MIN(earn;8*SSC_ceil) - SSC_ceil;0) + unemp_empr*MIN(earn;4*SSC_ceil) +SI(earn<SSC_empr_SMIC2*SMIC; fam_empr_2*earn; fam_empr*earn)+SI(earn<SSC_ceil;0;SI(earn>8*SSC_ceil;8*SSC_ceil*pens_empr_ex3;pens_empr_ex3*earn))+SI(earn<SSC_empr_SMIC3*SMIC;sickness_empr*earn;sickness_empr2*earn)
		SSC_empr_reduction	B	IF(OR(earn>SSC_empr_SMIC_ref*SMIC,earn='0'),0,-MIN'(SSC_empr_red_max*earn,(SSC_empr_red_max/SSC_empr_redrate2)*(SSC_empr_SMIC_ref*SMIC/earn-1)*earn)) -IF(earn<cice_max*SMIC;earn*cice_red)
		SSC_empr_final	B	SSC_empr_gross+SSC_empr_reduction

Key to range of equation B calculated separately for both principal earner and spouse P calculated for principal only (value taken as 0 for spouse calculation) J calculated once only on a joint basis.

## Notes

<sup>1</sup> The social protection scheme is named ARRCO for non-managers and AGIRC for managers. The two protection schemes have been merged since the 1st January 2019.

<sup>2</sup> During at most 12 months over a 18-months period; or, if there is a child under three in the family, until the child is three.

<sup>3</sup> The boundaries are defined as: minimum of 59 hours paid at gross minimum wage per hour per month and maximum of 120 hours paid at gross minimum wage per hour per month.

<sup>4</sup> Capital income, unemployment benefits, pensions or minimum old-age pensions are not taken into account in this model.

<sup>5</sup> The complete formula uses the minimum of this lump sum tax and the amount of housing benefits, if the family is a tenant. As the model does not include housing benefits, we only use the lump sum in the formula. This method tends to minimize the amount of “prime d’activité” served.

<sup>6</sup> In the previous model, for 2015 revenues, this reform only affects the income tax (no PPE in 2016) but not the benefits, since the “prime d’activité” will be served as from the beginning of 2016.

<sup>7</sup> Firms with more than 50 employees were already required to set up a profit-sharing scheme called “participation”

<sup>1</sup> Discrepancies can be explained by differences of coverage. For instance, the INSEE average wage series excludes public administration workers from its scope while the OECD series includes them.

# Germany

---

This chapter includes data on the income taxes paid by workers, their social security contributions, the family benefits they receive in the form of cash transfers as well as the social security contributions and payroll taxes paid by their employers. Results reported include the marginal and average tax burden for eight different family types.

Methodological information is available for personal income tax systems, compulsory social security contributions to schemes operated within the government sector, universal cash transfers as well as recent changes in the tax/benefit system. The methodology also includes the parameter values and tax equations underlying the data.

The national currency is the Euro (EUR). In 2024, EUR 0.92 was equal to USD 1. The average worker earned EUR 63 288 (Secretariat estimate for 2024).<sup>1</sup>

## Personal Income Tax Systems

### Central/federal government income taxes

#### *Tax unit*

Generally, the tax unit is the individual. Spouses may choose between two options: Joint assessment or individual assessment. In the case of joint assessment, the tax unit is the married couple. For the vast majority of couples joint assessment is beneficial compared to individual assessment. The income of dependent children is not assessable with that of the parents. Therefore, the calculations in this report are based on the assumption of joint taxation for spouses.

#### *Tax allowances and tax credits:*

##### **Standard reliefs and work-related expenses**

- Basic reliefs: None.
- Standard marital status reliefs: In the case of joint assessment the income tax liability for spouses is computed by the following splitting method:
  - First step: The taxable incomes of the spouses are calculated, summed up (specific allowances are doubled) and the resulting sum is divided by two.
  - Second step: The tax rate is applied to this averaged tax base.
  - Third step: The tax liability is calculated by doubling the result of step two.

Results: Given the progressive income taxation and different income levels the resulting tax liability for the couple is lower than with individual taxation. That is why the household as an economic unit benefits from the income splitting method. The highest splitting effect for couples is reached if one spouse earns zero taxable income and decreases with converging incomes of spouses. The splitting method results in identical average and marginal income tax rates for the principal and second earner, irrespective of the income distribution among them.

- Relief(s) for children: In 2024, there are equal tax credits of EUR 3 000 for the first and every subsequent child. There is an increased tax allowance per parent of EUR 3 306 for the subsistence of a child and an additional EUR 1 464 for minding and education or training needs (EUR 4 770). The amount of these allowances is doubled in case of jointly assessed parents and for lone parents if the other parent does not pay alimony. If the value of the tax credit is less than the relief calculated applying the tax allowances, the tax allowance is applied instead of the tax credit. In the calculations presented in this report we assume that a lone parent always receives the doubled child allowances.
- Relief for lone parents: As of 1 January 2015, taxpayers who live alone with at least one child that entitles them to the tax allowances or tax credits for children receive a standard additional allowance of EUR 1 908 (formerly EUR 1 308). This additional allowance is increased by EUR 240 for each additional child living in the household.

In 2020, the standard tax allowance for lone parents has been increased to EUR 4 008. Initially, this has been a temporary measure for the years 2020 and 2021 to mitigate the unique challenges faced by this family type due to the pandemic. The increase was made permanent from 2022

onwards to further support single parents. As of 1 January 2023, the standard tax allowance for lone parents adds up to EUR 4 260.

- Reliefs for social security contributions and life insurance contributions: Social security contributions and other expenses incurred in provision for the future (e.g., life insurance) are deductible up to specific ceilings. The calculation scheme that came into effect in 2005 has been modified as of 1 January 2023:
  - All contributions made to pension funds (i.e., both employee's and employer's contributions) are added up. The resulting amount is limited to the equivalent of the maximum contribution rate to miners' pension insurance scheme, rounded up to the nearest euro (in 2024: EUR 27 565). Within the aforementioned limit contributions to pension funds, diminished by the (tax-free) employers' share, are deductible from income.
  - The tax treatment of social security expenses (health, unemployment and care insurance) changed as of 1 January 2010. Employees' annual contributions to statutory health insurance excluding sickness benefit (assumed to amount to 96% of statutory health contributions) and employees' contributions to mandatory long-term care insurance are deductible from the tax base. In case these contributions do not exceed EUR 1 900/3 800 (single/married couples), contributions to unemployment insurance and other insurances premiums can be deducted in addition up to this ceiling.
- Work related expenses: Increased EUR 1 230 lump-sum deduction for work related expenses per gainfully employed person (until 2022: EUR 1 200). Work-related expenses that exceed the lump-sum are fully deductible (no ceiling). In December 2020, a "home office" deduction for the years 2020 and 2021 came into effect. It added up to EUR 5 per day spent exclusively working from home and was limited to a maximum amount of EUR 600 per year (corresponding to 120 working days) and was prolonged for the year 2022. As of 1 January 2023, the "home office" deduction is increased to EUR 6 per day and is now capped at the maximum amount of EUR 1 260 per year (corresponding to 210 working days). The "home office" deduction is counted against the general lump sum deduction for work-related expenses.
- Special expenses: Lump sum allowance (EUR 36/72 (singles/couples)) for special expenses, e.g., for tax accountancy. The actual expenses will be fully deductible from taxable income if the taxpayer proves that these expenses exceed the lump sum allowance.
- Relief measure due to high inflation: From October 2022 until the end of 2024, employers have the opportunity for additional one-off payments of up to EUR 3 000 (in total) tax and social security free to compensate employees for high inflation ("Inflationsausgleichsprämie").

### **Main non-standard tax reliefs applicable to an AW**

- Contributions to pensions, life insurance, superannuation schemes: Other expenses than the compulsory contributions to social security are deductible as reliefs for (voluntary) social security contributions up to specific ceilings (see section on Standard reliefs and work-related expenses).
- Medical expenses: Partially deductible if not covered by insurance.

### *Tax schedule*

The German tax schedule is formula based. Taxable income is rounded down (to the EUR).

- The basic allowance in 2024 is EUR 11 784.
- X is the taxable income,
- T is the income tax liability,
- As of 1 January 2024, the following definitions are used in the income tax liability formulas:

$$Y = \frac{X - 11\,784}{10\,000}$$

$$Z = \frac{X - 17\,005}{10\,000}$$

The income tax liability (amounts in EUR) is calculated as follows:

1.  $T = 0$  for  $X \leq 11\,784$
2.  $T = (954.80 Y + 1\,400)Y$  for  $11\,785 \leq X \leq 17\,005$
3.  $T = (181.19 Z + 2\,397)Z + 991.21$  for  $17\,006 \leq X \leq 66\,760$
4.  $T = 0.42 X - 10\,636.31$  for  $66\,761 \leq X \leq 277\,825$
5.  $T = 0.45 X - 18\,971.06$  for  $277\,826 \leq X$

These formulas are used to calculate the income tax for single individuals and married couples too.

If families choose the option of being assessed separately these formulas are applied to the individual taxable income of the principal earner and the spouse. In the case of jointly assessed families these rates are applied to half of the joint taxable income (see point 1.1.2.1. Splitting method).

### *Solidarity surcharge*

As of 1 January 2024, the solidarity surcharge is levied at 5.5% of the income tax liability subject to an extended exemption limit of EUR 18 130/36 260 (singles/couples). The income tax liability is calculated applying the tax allowance for children. If the income tax liability exceeds the exemption limit, the solidarity surcharge will be phased in at a higher rate of 11.9% of the difference between the income tax liability and the exemption limit until it equals 5.5% of the total liability.

### **State and local income taxes**

None.

## **Compulsory Social Security Contributions to Schemes Operated Within the Government Sector**

The amount of social security contributions depends on the wage level and the insurance contribution rates. All contributions are subject to a contribution ceiling, i.e. the maximum income up to which statutory insurance contributions are calculated. The contribution rates for pension, health, care and unemployment insurances are fixed by the government.

### **Employees' contributions**

In general, earnings up to EUR 4 800 per year were free of employee social security contributions until 31 December 2012. As of 1 January 2013, some essential changes came into effect concerning minimally paid employment. The earnings limit increased from EUR 400 to EUR 450 per month. As of 1 October 2022, the upper earnings limit rose to EUR 520 per month (now a dynamic limit linked to the general statutory minimum wage of EUR 12 per hour). As of 1 January 2024, the general statutory minimum wage adds up to Euro 12.41 per hour and an upper earnings limit of EUR 538, respectively. People who take up a new mini-job are generally subject to mandatory insurance coverage in the statutory pension scheme with the full pension contribution rate of 18.6% (in 2024). If the earnings are below the amount of EUR 175 (minimum contribution limit), a minimum contribution of EUR 32.55 has to be paid (18.6% of EUR 175).

The employer's share amounts to 15% of the whole pay whereas the employee's part adds up to 3.6% (or the difference between minimum contribution and employer share). By applying for an exemption from obligatory insurance coverage the mini-job holder may reduce his/her share to EUR 0. Only if people started their mini-job before 2013 and their earnings do not exceed the previous earning limit of EUR 400, they stay contribution-free in all classes of social insurance.

As of 1 April 2003, there was an additional concession for employees with monthly income between EUR 400.01 and EUR 800 per month (the so-called 'sliding pay scale', EUR 4 800.12 and EUR 9 600 per year). Due to the new regulations in 2013 mentioned above the earnings limits shifted to EUR 450.01 and EUR 850.00 per month (EUR 5 400.12 and EUR 10 200 per year). As of 1 July 2019, provisions for the newly-created so-called 'transition band' extend the upper earnings limit from EUR 850 per month to EUR 1 300 per month (EUR 15 600 per year). As of 1 October 2022, the earnings limits within the 'transition band' increased to EUR 520.01 and EUR 1 600 per month (EUR 6 240.12 and EUR 19 200 per year). As of 1 January 2023, the upper earnings limit increases from EUR 1 600 to EUR 2 000 per month (EUR 24 000 per year). In 2024, the earnings limits within the 'transition band' range between EUR 538.01 and EUR 2 000 per month (EUR 6 456.12 and EUR 24 000 per year). If the employee's income falls within this range, part of the income is exempt from social insurance contributions. The employees' contributions to social insurance rise from zero on a straight-line basis over the income band reaching the full rate at EUR 2 000 per month. Until 30 September 2022, employers were required to pay the regular contributions of around 20 percent on the employee's earnings. Under the new regulations, the employer's share decreases from around 28 percent for a regular wage of EUR 538.01 to the standard employer's contribution amounting to around 20 percent for earnings at the upper 'transition band' limit. The arrangement is purely intended to relieve the financial burden on employees. Within the 'transition band', employees' reduced contribution rates to statutory pension insurance do not reduce their pension entitlements. Details on social security contributions for workers earning more than EUR 24 000 in 2024 are provided below.

### *Pensions*

Employers and employees respectively pay half of the contribution rate of 18.6% in 2024, that is 9.3% of the employee's gross wage earnings, up to a contribution ceiling of EUR 90 600.

### *Sickness*

As of 1 January 2015, the applicable contribution rate is 14.6% on principle (portion of 7.3% for employers and employees). Depending on the financial situation of each sickness fund, employees only were obliged to pay a supplementary contribution to the sickness fund until December 2018. Since January 2019, employees and employers have to pay one half each of this supplementary contribution which amounts to 1.7% on average in 2024 (portion of 0.85% for employers and employees). Therefore, the contribution rate averages 8.15% for employers and employees in 2024. The contribution ceiling in 2024 is EUR 62 100. While all calculations shown in this report assume membership in the public health insurance, workers with earnings above the contribution ceiling may opt out of the mandatory public health insurance system and may choose a private insurance provider instead (those opting for a private health insurance provider are required to obtain private long-term care insurance as well).

### *Unemployment*

Employees pay half of the insurance contributions; the employer pays the other half. In 2023, the contribution rate is 2.6% of assessable income. Employee and employer each pay 1.3%. The contribution ceiling in 2024 is EUR 90 600.

*Care*

A long-term care insurance (a 1% contribution rate) went into effect on 1 January 1995. The rate was raised to 1.7% of the gross wage when home nursing care benefits were added six months later. As of 1 July 2008, the rate was increased to 1.95%. In 2013 and 2014, the contribution rate amounted to 2.05%. In 2015 and 2016, the contribution rate added up to 2.35%. As of 1 January 2017, the contribution rate was augmented to 2.55%. As of 1 January 2019, the contribution rate amounted to 3.05% until 30 June 2023. Since 1 July 2023, the standard contribution rate has been increased to 3.4%. The employers pay half of the contributions for long-term care insurance. In other words, employers and employees both pay a rate of 1.70%. The assessable income is scaled according to the gross wage earnings but there is a contribution ceiling of EUR 62 100 in 2024.

Due to the order of 7 April 2022 of the First Senate of the Federal Constitutional Court the legal framework for long-term care insurance was reformed in 2023. The new regulations provide different contribution rates for parents with two up to five children in order to reflect the costs associated with raising additional children. As of 1 July 2023, the contribution rate for parents of several children aged under twenty-five is reduced by 0.25 percentage points per child which means a reduction of 1.0 percentage points for parents with five or more children.

As from 1 January 2005, child-raising is given special recognition in the law relating to statutory long-term care insurance. Childless contribution payers were required to pay a supplement of 0.25%, raising the contribution rate paid by a childless employee from 0.975% to 1.225% as of 1 July 2008. In 2013 and 2014, the contribution rate of a childless employee added up to 1.275%. In 2015 and 2016, the contribution rate amounted to 1.425% for a childless employee. As of 1 January 2017, the contribution rate was raised to 1.525% for a childless employee. Since January 2019, a childless employee has had to pay a contribution rate of 1.775%. As of 1 January 2022, the contribution rate added up to 1.875% for a childless employee until 30 June 2023. As of 1 July 2023, the contribution rate amounts to 2.3% for a childless employee. This regulation does not affect the employer's payment. Employer always have to pay half of the standard contribution rate.

*Work injury*

Employer only.

*Family allowances*

None.

*Others*

None.

**Employers' contributions**

See Section on Employees' contributions.

*Pensions, sickness, unemployment, care:*

See Section on Employees' contributions.

*Work injury*

Germany implemented a statutory occupational accident insurance. It is provided by industrial, agricultural and public-sector employers' liability insurance funds. This insurance protects employees and their families

against the consequences of accidents at work and occupational illnesses. It is funded by contributions paid by employers only. The amount of the employer's contributions depends on the sum of employee's annual pay and the employer's respective hazard level. As it is not possible to identify a representative contribution rate, these amounts are not considered in this report.

### *Family allowances*

None.

### *Others*

None.

## Universal Cash Transfers

### ***Transfers related to marital status***

None.

### ***Transfers for dependent children***

None.

## Main Changes in Tax/Benefit Systems Since 1997

The following table shows changes in the tax credit and the tax allowance for children since 1997:

Year	Child credit				Child allowance
	First child	Second child	Third child	Fourth and subsequent children	
1997	1 350	1 350	1 841	2 147	3 534
1999	1 534	1 534	1 841	2 147	3 534
2000	1 657	1 657	1 841	2 147	5 080
2002	1 848	1 848	1 848	2 148	5 808
2009*1	1 968	1 968	2 040	2 340	6 024
2010	2 208	2 208	2 280	2 580	7 008
2015	2 256	2 256	2 328	2 628	7 152
2016	2 280	2 280	2 352	2 652	7 248
2017	2 304	2 304	2 376	2 676	7 356
2018	2 328	2 328	2 400	2 700	7 428
2019	2 388	2 388	2 460	2 760	7 620
2020*2	2 448	2 448	2 520	2 820	7 812
2021*3	2 628	2 628	2 700	3 000	8 388
2022*4	2 628	2 628	2 700	3 000	8 548
2023	3 000	3 000	3 000	3 000	8 952
2024	3 000	3 000	3 000	3 000	9 540

\*1 plus EUR 100 one-off child credit payment for each child.

\*2 plus EUR 300 one-time bonus benefit payment per child

\*3 plus EUR 150 one-time bonus benefit payment per child

\*4 plus EUR 100 one-time bonus benefit payment per child

Up to 2004, the calculation of the relief for social security contributions and other expenses proceeded in three steps. First, EUR 3 068/6 136 (singles/couples) were deducted. These amounts were, however, lowered by 16% of gross wages (serving as a proxy for employers' social security contributions). This deduction was provided as a partial compensation for the self-employed who do not receive tax-free employers' social security contributions. Second, the remaining expenses were deductible up to EUR 1 334/2 668 (singles/couples). Third, half of the remaining expenses were deductible up to EUR 667/1 334 (singles/couples).

In 2004, the tax rate was reduced and the formula for calculating the income tax was changed. The relief for lone parents was reduced to EUR 1 308, the lump sum allowance for work related expenses was reduced to EUR 920.

As from 1 January 2005, the final stage of the 2000-tax reform came into effect. The bottom and top income tax rates were further reduced to 15% and 42%. Since 1998, both the bottom and top income tax rate have been reduced by about 11 percentage points while the personal allowance has been raised from EUR 6 322 to EUR 7 664. The tax cuts reduce the tax burden for all income taxpayers, providing the greatest relief to employees and families with low and medium incomes as well as to small- and medium-sized unincorporated businesses.

On 1 January 2005, the law regulating the taxation of pensions and pension expenses entered into force. The law provides a gradual transition to ex-post taxation of pensions paid by the statutory pension insurance. In the long run, the tax treatment of capital-based employee pension schemes based on a contract between employer and employee will be reformed in the same way as the tax treatment in respect of the state pension scheme. In addition to the increased deductibility of contributions to the state and certain private pension schemes, the law contains rules which are intended to increase the attractiveness of private capital-based pension schemes and to encourage individuals to invest privately for their old-age pension.

Up to 30 June of 2005, employees paid half of the sickness insurance contributions; the employer paid the other half. As from 1 July 2005, members of the statutory health insurance scheme also paid an income-linked contribution of 0.9% to which employers do not contributed. In return from 1 July 2005, all statutory health insurance funds have reduced their contribution rates by 0.9 percentage points.

In 2007, a new top income tax rate of 45% was introduced for taxable income above EUR 250 000 (EUR 500 000 for jointly assessed spouses).

In 2009, the bottom income tax rate was reduced to 14%. The basic allowance was increased to EUR 7 834. All thresholds were increased by EUR 400.

Since 1 January 2010, the basic allowance has been augmented to EUR 8 004 and all thresholds have been increased by EUR 330. Furthermore, new legislation improves the tax treatment of expenditure on health insurance and long-term care insurance. As of 1 January 2013, the basic allowance rose to EUR 8 130. As of 1 January 2014, the basic allowance was increased to EUR 8 354. As of 1 January 2015, the basic allowance amounted to EUR 8 472. The standard relief for lone parents adds up to EUR 1 908. Lone parents are entitled to an extra allowance of EUR 240 for the second and each subsequent child.

In 2020, the standard tax allowance for lone parents was increased to EUR 4 008. Initially, this was a temporary measure for the years 2020 and 2021 to mitigate the particular challenges faced by this family type due to the pandemic. Later on, the increase was made permanent from 2022 onwards to further support single parents. As of 1 January 2023, the standard tax allowance for lone parents amounts to EUR 4 260.

Since 1 January 2016, the basic allowance was increased to EUR 8 652. As of 1 January 2017, the basic allowance was raised to EUR 8 820. Since 1 January 2018, the basic allowance was increased to EUR 9 000. As of 1 January 2019, the basic allowance was raised to EUR 9 168. In 2020, the basic allowance

amounted to EUR 9 408. In 2021, the basic allowance was increased to EUR 9 744 and the thresholds for tax rates were increased to account for the impact of inflation. The basic allowance was further increased from EUR 9 984 to EUR 10 347 with retroactive effect from 1 January 2022 (moving the thresholds for tax rates accordingly). As of 1 January 2023, the basic allowance added up to EUR 10 908. The basic allowance was further increased from EUR 11 604 to EUR 11 784 with retroactive effect from 1 January (see the Tax schedule section).

The steep increase of the thresholds for the solidarity surcharge (see Solidarity surcharge section) corresponds to an abolishment for around 90% of those who paid it in 2020. For a further 6.5% of taxpayers, the surcharge has been reduced. As of 1 January 2023, the exemption limit for raising solidarity surcharge was extended to an income tax liability of EUR 17 543/35 086 (singles/couples) and rose to EUR 18 130/36 260 (singles/couples) as of 1 January 2024.

### ***Recent changes to labour taxation due to rising prices, particularly in the area of energy***

The basic allowance was increased from EUR 9 984 to EUR 10 347 with retroactive effect from 1 January 2022 (moving the thresholds for tax rates accordingly). The tax allowance per parent for the subsistence of a child was also increased from EUR 2 730 to EUR 2 810 with retroactive effect from 1 January 2022. Similarly, the standard tax allowance for employees was increased by EUR 200 to EUR 1 200.

In 2022, families with children received a one-time bonus benefit payment of EUR 100 per child. The bonus will not be offset against basic income support for jobseekers. However, in the case households with higher incomes, the bonus will be offset against the tax allowance for children.

Furthermore, all workers who are liable to income tax received a one-off energy price allowance of EUR 300. This lump-sum payment will be subject to income tax, but not to social security contributions. As of 1 January 2023, the basic allowance adds up to EUR 10 908. The standard tax allowance for employees amounts to EUR 1 230, and the “home office deduction”, which is counted against the standard tax allowance for work-related expenses, is extended from EUR 5 to EUR 6 per day spent exclusively working at home and is now capped at the maximum amount of EUR 1 260 per year (corresponding to 210 working days, formerly 120 working days). The basic allowance was increased from EUR 11 604 to EUR 11 784 with retroactive effect from 1 January 2024. The tax allowance per parent for the subsistence of a child was also increased from EUR 3 192 to EUR 3 306 with retroactive effect from 1 January 2024.

## 2024 Tax equations

The equations for the German system in 2024 are mostly calculated on a family basis.

The standard functions which are used in the equations are described in the technical note about tax equations. The function `acttax` carries out a rounded calculation for the tables but the unrounded version `purtax` is used in calculating the marginal rates.

For a taxpayer with children, either the child allowance or the cash transfer is included in the tax calculating depending on which option is more beneficial. In practice, therefore, it is necessary to calculate both the option with and without the child allowance. However, the calculation of solidarity surcharge is always based on the calculation which does assume that the child tax allowance is given.

Variable names are defined in the table of parameters above, within the equations table, or are the standard variables “married” and “children”. The affixes “\_princ” and “\_spouse” on Variable names in functions indicate that the values have to be calculated for the principal and spouse, respectively. The parameter `year` in function `SSC_Allowance` is the year for which you calculate the Allowance.

	Line in country table and intermediate steps	Variable name	Range	Equation
1.	Earnings	<code>earn</code>		<code>Ave_earn-Infl_payment</code>
	Quotient for tax calculation	<code>quotient</code>	J	<code>1+Married</code>
2.	Allowances:			
	Children	<code>children_al</code>	J	<code>Children*Child_al</code>
	Lone parent	<code>lone_allce</code>	J	<code>Children&gt;0)*(Married=0)*Lone_al+(Children&gt;0)*(Married=0)*(Children-1)*Lone_al_add</code>
	Soc sec contributions	<code>SSC_al</code>	J	Function: <code>SSC_Allowance(earn_princ, earn_spouse, SSC_princ + SSC_spouse, Quotient, SSC_dn, SSC_dn_rt, SSC_dn_lim, SSC_dn_lump_rt, If(Children&gt;0; "employee"; "childless"), year, rounded)</code>
	Work related	<code>work_al</code>	J	<code>Work_rel_al+MIN(earn_spouse,Work_rel_al)</code>
	Allow. for special expenses	<code>SE_al</code>	J	<code>SE_al*quotient</code>
	Total	<code>tax_al</code>	J	<code>children_al+SSC_al+work_al+ lone_allce + SE_al</code>
3.	Credits in taxable income	<code>taxbl_cr</code>	J	0
4.	CG taxable income	<code>tax_inc</code>	J	<code>earn-tax_al</code>
5.	CG tax before credits			
	adjusted taxable income	<code>adj</code>	J	<code>tax_inc/quotient</code>
	Formula based tax schedule	<code>tax_formula</code>	J	Function: <code>acttax(taxinc, rate, reduction, threshold1, threshold2, threshold3, equationrate, tax_first_stage, tax_second_stage, tax_third_stage, tax_fourth_stage, rate2, reduction2)</code>
	Adjust for the quotient	<code>tax_adj</code>	J	<code>Quotient*tax_formula</code>
	Include solidarity surcharge	<code>sol_surch</code>	J	<code>MIN( tax_adj * surcharge, Positive(tax_adj - surcharge_limit*Quotient) * surcharge_alt)</code>
	Tax paid	<code>CG_tax_excl</code>	J	<code>tax_adj+sol_surch</code>
6.	Tax credits :	<code>tax_cr</code>	J	0
7.	CG tax	<code>CG_tax</code>	J	<code>CG_tax_excl</code>
8.	State and local taxes	<code>local_tax</code>	J	0
9.	Employees' soc security	<code>SSC</code>	B	Function: <code>SSC(earn_princ, If(Children&gt;0; "employee"; "childless"), rounded) + SSC(earn_spouse, If(Children&gt;0; "employee"; "childless"), rounded)</code>
11.	Cash transfers	<code>Cash_tran</code>	J	<code>Children*ch_cred</code>
13.	Employer's soc security	<code>SSC_empr</code>	B	Function: <code>SSC(earn_princ, "employer", rounded) + SSC(earn_spouse, "employer", rounded)</code>

Key to range of equation

B calculated separately for both principal earner and spouse

P calculated for principal only (value taken as 0 for spouse calculation)

J calculated once only on a joint basis

## Notes

<sup>1</sup> For Germany, the increase in the average wage in 2023 is to a significant extent due to payments of the so-called “Inflationsausgleichsprämie” (see 1.1.2.1.). This instrument was widely used by employers and labour unions in collective bargaining agreements for 2023 and 2024. As the payments are tax and social security free, the average and marginal rates for Germany in 2024 would be overestimated if the payments would not be taken into account. Therefore, an estimated amount for the payment in 2024 for the average worker is included in the model calculations for Germany (see parameter values below).

<sup>2</sup> To prevent an overestimation of the tax wedge for Germany in 2024, the payment of tax and social security free “Inflationsausgleichsprämie” is included in the model. However, no official data on the average amount of the payment exists. Therefore, it has to be estimated. The payment for the average worker is set to 750 euros based on estimations from the Federal Government in its economic forecast. The estimate is surrounded by considerable uncertainty.

# Greece

---

This chapter includes data on the income taxes paid by workers, their social security contributions, the family benefits they receive in the form of cash transfers as well as the social security contributions and payroll taxes paid by their employers. Results reported include the marginal and average tax burden for eight different family types.

Methodological information is available for personal income tax systems, compulsory social security contributions to schemes operated within the government sector, universal cash transfers as well as recent changes in the tax/benefit system. The methodology also includes the parameter values and tax equations underlying the data.

The national currency is the Euro (EUR). In 2024, EUR 0.92 was equal to USD 1. In 2024, the estimated gross earnings of the average worker are EUR 25 198 (Secretariat estimate).

## Personal income tax system

### **Central government income tax**

#### *Tax unit*

Individuals are subject to national income tax.

Individuals who are Greek tax residents are subject to income tax in Greece on their worldwide income earned in a certain tax year, whereas non-residents are subject to tax in Greece only on income sourced in Greece irrespective of their nationality, or place of domicile. Moreover, an individual whose stay in Greece exceeds 183 days cumulatively in a twelve-month period is considered as a tax resident in Greece and is subject to tax of his/her worldwide income irrespective of the individual's nationality. This does not apply in the case of individuals who are in Greece exclusively for tourism or medical, therapeutic or similar purposes of private nature and their stay does not exceed 365 days, including short periods of stay abroad. Due consideration is given to bilateral conventions, for the elimination of double taxation, their provisions superseding domestic law.

Individuals who have completed 18 years of age are obliged to file an income tax return regardless of whether they have taxable income or not.

Spouses file a joint income tax return but each spouse is liable for the tax payable on his or her share of the joint income. Persons who have entered into a civil union – partnership can also file a joint income tax return. In this case, civil union partners have the same tax treatment as married couples. The tax return can be filed separately, if at least one of the spouses opts for it, with a declaration until 28 February of the year of submission of the return. The choice of separate return is binding on the other spouse as well, is irrevocable for the first year concerned and is valid for each subsequent tax year, if it is not revoked by February 28 of the respective year.

Regarding income derived by minor children, the parent who has the custody is liable for filing a tax return. The income of minor children is added to the income of the parent who has the custody and is taxed in the name of the parent who is in principle liable for tax filing. This provision does not apply to the following types of income, in respect of which the minor child has a personal tax obligation: a) employment income and b) pensions due to the death of his father or mother.

Losses incurred by a spouse or civil union partner cannot be set off against the income of the other spouse or partner. Spouses or civil union partners file a return separately if (a) they have been divorced or have terminated the civil partnership at the time of the tax filing or (b) one of the spouses or civil union partners is bankrupt or has been subject to guardianship. The taxpayer's spouse can be considered as a dependent member, provided that he/she does not have any taxable income.

As dependent members, related to the taxpayer, are regarded single children under the age of 18, single adult children up to the age of 25 years studying at the university or serving their military service or registered as unemployed to the Service of Employment (DYPA); taxpayers are deemed to be in charge for their ascendants and/or their spouses' relatives (up to the 3rd degree) who are orphans provided that they live with them and their annual taxable income does not exceed the amount of EUR 3 000 (alimony and disability benefits and similar allowances are not included). The taxpayer children and siblings of both spouses with a disability of at least 67% who are single or divorced or widowed: are also considered as dependent members, unless their annual income exceeds the amount of EUR 6 000 (not including alimony and disability benefits and similar allowances).

### *Tax allowances and tax credits*

#### **Standard tax reliefs**

- Social security contributions: all compulsory social security contributions and optional contributions to legally constituted funds are fully deductible from taxable gross income.
- Tax is reduced for employees and pensioners, for each tax bracket, as follows:
  - by EUR 777 for annual income up to EUR 12 000, for taxpayers with no dependent children.
  - by EUR 900 for annual income up to EUR 12 000 for taxpayers with one dependent child.
  - by EUR 1120 for annual income up to EUR 12 000 for taxpayers with two dependent children.
  - by EUR 1340 for annual income up to EUR 12 000 for taxpayers with 3 dependent children.
  - by EUR 1580 for annual income up to EUR 12 000 for taxpayers with 4 dependent children.
  - by EUR 1780 for annual income up to EUR 12 000 for taxpayers with 5 dependent children
  - for taxpayers with more than 5 dependent children, the above-mentioned tax credit is increased by EUR 220 per child.
  - for income exceeding EUR 12 000, the aforementioned tax credit is reduced by EUR 20 for every EUR 1 000 of taxable income, which does not apply to taxpayers with 5 or more dependent children.

If the amount of tax is less than these amounts, the reduction of tax is limited to the relevant amount of tax.

During the tax year, the taxpayer is required to make payments for acquiring goods and receiving services within the country or in Member States of the European Union or EEA, which have been paid through electronic payments, the minimum amount of which has to be 30% of taxable income derived from wages, pensions, business activity, and up to EUR 20 000. If this number of electronic payments is not reached, a penalty of 22% is imposed to the remaining amount. The calculation of the income does not include the amount of the solidarity contribution of article 43A<sup>1</sup>, and the amount of alimony given to the divorced spouse or a civil union partner and/or a dependent child, if it is paid by electronic means of payment. In the case that the expenses incurred concern PIT payments and Single Property Ownership Tax (ENFIA), loan obligations to financial institutions and rents exceeding 60% of the income, the required expenses are limited to 20% of taxable income; this applies provided that such expenses have been effected with electronic means of payment.

The amount of tax, as calculated for each tax bracket, is further reduced by EUR 200 for the taxpayer as well as for each dependent member, provided that the taxpayer or his/her dependents are disabled (over 67%) or disabled soldiers or military personnel injured in the course of their duties or war victims or victims of terrorist attacks or in case they receive pension by the State in the capacity of war victims or on grounds of disability.

Note: Foreign tax residents are not eligible to tax deductions, unless they are tax resident in an EU/EEA member State and (a) derive at least 90% of their total income from sources in Greece or (b) prove that their taxable income is so low that they would be entitled to tax reduction under the tax legislation of the State of their tax residency.

#### **Non-Standard tax credits**

The payable amount of tax is reduced by 20% on the donations to certain bodies, as well as to political parties, party alliances and candidates for the National Parliament and the European Parliament, if donations exceed the amount of EUR 100 during the tax year and are deposited in special accounts held for this purpose at a bank legally operating in an EU or EEA Member State. The total amount of donations cannot exceed 5% of the taxable income. Especially for donations to charitable institutions and registered Civil Society Organizations, the amount of tax is reduced by 40% on the amounts of donations, as long as

the donations exceed during the tax year the amount of EUR 100 and are deposited in special accounts held for this purpose at a bank legally operating in an EU or EEA Member State. The total amount of donations in this case cannot exceed 40% of the taxable income.

### Exemptions

Certain types of income, as specified in the Income Tax Code are exempt from the tax.

Examples:

- income earned in the performance of their duties by foreign diplomatic representatives or consulate agents, employees of embassies and consulates that have the nationality of the represented State as well as by individuals working in the EU Institutions or other International Organizations that have been installed under an international treaty applied by Greece.
- alimony received by the beneficiary according to the Court adjudication or notary Document;
- all forms of pensions provided to war victims and their families, as well as to soldiers and military personnel injured in the course of their duties in times of peace.
- salaries, pensions etc. paid to disabled persons ( minimum level of disability 80%).
- unemployment benefits granted by the National Employment Organisation (OAED) provided that the total annual income of the beneficiary does not exceed the amount of EUR 10 000.
- financial aid to recognized political refugees, to persons residing temporarily in Greece for humanitarian reasons and to persons that have submitted the relevant application to the competent Greek authorities, paid by bodies carrying out refugee aid schemes financed by the UN and the EU.
- the benefit for hazardous labour provided to employees working in the armed forces, the police, the fire brigade, the coastal police, and the special compensation to staff provided first aid services up to 100% and the flying compensation to pilots of civil aviation up to 65%.
- the fees paid by the World Association of Disabled Artists (VDM.FK) to the members of foot and mouth painters, who are tax residents of Greece, exclusively for the work of painting paid by the Union with exchange.
- pensioners' social solidarity allowance (EKAS-EFKA ).
- Income from employment obtained by foreign officers and low crew members of merchant ships, who are foreign tax residents, on merchant ships with Greek flag, which perform exclusively international trips.

Note: Payments related to benefits and similar allowances provided to special categories of disabled persons are excluded for the determination of income since 1/1/2022.

### Tax calculation

Taxable income is derived from the following sources:

- a) income from employment and pensions.
- b) income from business activity
- c) investment income which includes income from dividends, interest, royalties and income from immovable property (rental income).
- d) income from capital gains, which includes income deriving on transfer of real estate or securities.

Net income is computed separately within each category with tax rules that vary across income categories.

The taxpayer is subject to an alternative minimum tax when his/her imputed income is higher than his/her total declared income. In this case, the difference between imputed and actual income is added to the

taxable income. Imputed income is calculated based on the taxpayer's and his/her dependents' living expenses.

Income from employment is subject to withholding tax. The tax is withheld by the employer and is calculated by applying the taxpayer's progressive income tax schedule. The employer calculates the withholding tax on the basis of the taxpayer's annual net salary (net of social security contributions). The resulting tax is the annual tax due, 1/14 of which constitutes the monthly withholding tax for the private sector's employees (every employee in the private sector receives 14 monthly salaries per year, i.e., 12 monthly salaries plus one salary as Christmas bonus, ½ salary as Easter bonus and ½ salary as summer vacation bonus). For the employees of the public sector, the monthly withholding tax is calculated as 1/12 of the annual tax due, because of the fact that bonuses in the public sector have been eliminated. If the taxpayer's final tax liability (derived from the annual declared income) exceeds the aggregate of the amounts already withheld or prepaid, the remaining tax is generally payable in eight equal monthly instalments. Any excess tax paid or withheld will be refunded.

### *Rate schedule*

Depending on the income category the following tax schedules apply:

Income from employment and pensions is pooled together with income from business activity and is taxed at the following rates:

Income bracket (EUR)	Tax rate (%)	Tax bracket (EUR)	Total amount	
			Income (EUR)	Tax (EUR)
10 000	9%	900	10 000	900
10 000	22%	2 200	20 000	3 100
10 000	28%	2 800	30 000	5 900
10 000	36%	3 600	40 000	9 500
Excess	44%			

The above tax scale does not apply for employment income acquired by:

- Officers working in merchant ships, whose income is taxed at a 15% flat rate.
- Low- crew members working in merchant ships, whose income is taxed at a 10% flat rate.
- Pilots, co-pilots and aircraft engineers who are tax residents in Greece for their monthly compensation, which is taxed at a tax flat rate of 15% and whose air company has a tax residency or permanent establishment in Greece,
- Members of the Independent Board of Refugees Appeal for their monthly compensation, which is taxed at a tax flat rate of 15%.
- The aforementioned categories of employment income are taxed independently, with exhaustion of the tax liability of their beneficiaries.
- Athletes and coaches paid by athletic SA's and coaching educators paid by federations when their annual income deriving by the signing of a transfer, renewal or termination contract exceeds the amount of 40 000 EUR are taxed at a rate of 22%.

For deductions see section on Standard tax reliefs.

Income from agricultural business is taxed independently but ~~with~~ under the same tax schedule. The previously described tax credit is granted to farmers as well. In case a farmer is earning income from employment / pension, only one tax credit is given.

Income from dividends is taxed at a 5% flat rate, income from interest is taxed at a 15% flat rate and income from royalties is taxed at a 20% flat rate.

Income from immovable property (Rental Income) is taxed at the following rates:

Income	Tax Rate
0-12.000	15%
12.001 – 35.000	35%
35.001-	45%

From 1 January 2017, income derived from short term rentals of sharing economy (if it is not considered as income from business activity) is taxed with the above tax scale.

Income from capital gains is taxed at a 15% flat rate.

### *Income tax return submission and tax payment for tax year 2023*

Income tax returns are timely submitted by 26 July 2024 and the tax is paid in eight (8) equal, monthly instalments of which the first by 31/7/2024 and the following within the last working day of seven (7) next months.

### **State and local income taxes**

There are no local income taxes in Greece. Municipalities (the local authorities) receive 20% of the national income tax revenues.

## **Mandatory Social Security Contributions to schemes operated within the Government Sector**

The great majority of individuals who are employed in the public and private sector and render dependent personal services are subject to a mandatory principal and direct insurance at the Electronic National Social Security Fund (e-EFKA) for their main pension and health care.

Apart from the main contribution, e-EFKA compulsorily collects contributions for other minor Funds created for the employee's benefit (Unemployment Benefits Funds, etc.).

The average rates of contributions payable by white-collar employees as a percentage of gross earnings are as follows (%):

### **For the period 1 January, 2023, to 31 December, 2024**

#### **For work in private and public sector**

	Employer	Employee	Total
1. National Social Security Fund ( e- EFKA) – Main Pension	13.33	6.67	20.00
e-EFKA- Supplementary Pension ( exETEAEP) or TEKA*	3.00	3.00	6.00
3. Healthcare Coverage	4.55	2.55	7.10
4. Other Funds	1.41	1.65	3.06
Total	22,29	13,87	36,16

Note: \* From 1 January 2022, new entrants in labour market are subject to the new Hellenic Auxiliary Pensions Defined Contributions Fund (TEKA). The contributions rates (for employees and employers) are the same as for the Branch of Supplementary Insurance of e-EFKA (ex. ETEAEP). Those already insured aged under 35 (born after 1.1.1987) may select to switch compulsory supplementary insurance from e-EFKA to TEKA.

For blue-collar workers engaged in heavy work (unhealthy, dangerous etc.), higher contributions are due ( 17.32% paid by the employee and 24.44% paid by the employer ensuring that such individuals become eligible for pension benefits five years earlier than other workers), ( extra 2.20% for e-EFKA- Main Pension and 1.25% for e- EFKA - Supplementary Pension of TEKA, contributed by the employee, and extra 1.40% for e-EFKA- Main Pension and 0.75% for e-EFKA -Supplementary Pension or TEKA, contributed by the employer). In the industrial sector, an additional 1% contribution is imposed as an occupational risk contribution which is paid by the employer, given that these workers are subject to heightened risk of labour accidents and occupational diseases due to the challenging conditions of their employment

It should be noted that from 1.1.2024 the upper limit of insurable earnings is set to EUR 7353.53 (increased by 3.46%, in comparison with the main insurance categories of 1.1.2023).

The contribution for lawyers and engineers providing dependent services (Law 4756/2020, art. 35) of the Supplementary Insurance Branch of the former ETEAEP or TEKA is a fixed sum of EUR 44.24 EUR 53.32 or EUR 63.53 per month, depending on the respective insurance class level. This contribution is shared between the lawyer or engineer and their employer.

From 1.1.2022, new entrants in social security are subject to the new Hellenic Auxiliary Pensions Defined Contributions Fund (TEKA). Already insured may optionally insure in TEKA, on the condition they are born from 1/1/1987 onwards. The contributions rates and categories are the same as for the Branch of Supplementary Insurance of e-EFKA (ex-ETEAEP).

For the former Lump Sum section of ex-ETEAEP, the contribution and the monthly basis on which the contribution is calculated, for employees first insured before 1992, is determined by the statute of social security body which was integrated into ex-ETEAEP. The contribution for employees first insured after 1992, for the former Lump Sum of ex-ETEAEP is set at 4%. The monthly basis, on which the contribution is calculated, is the same basis amount as for e-EFKA.

Insurance contribution for the engineers, lawyers and doctors providing dependent services and insured at the former Lump-sum section of ex-ETEAEP is calculated from 1 January 2023 as a fixed amount of EUR 29.49, EUR 35.17 or EUR 41.97 per month, depending on the respective insurance class. The insured persons are subject to the first insurance class, onwards they are entitled to opt for their insurance class. The contribution for lawyers is shared between the lawyer and his/her employer.

Old-age pensioners pay contributions according to general rules if they work. Moreover, the old-age pensioners pay an additional contribution of 10% (7.7% for main insurance and 2.3% for auxiliary insurance) on their salary. Lawyers and engineers pay an additional contribution of 7.7% on their salary and 40% on the above fixed amounts for the Supplementary Insurance Branch of E-EFKA.

All these social security contributions are fully deductible for income tax purposes.

## Universal Cash Transfers

### ***Transfers related to marital status***

According to the National General Collective Labour Agreement, a marriage allowance, which is set at a rate of 10% of the gross salary, is granted only to workers employed by employers that belong to the contracting employer organisations<sup>2</sup>. For public servants no marriage benefit is granted.

### ***Transfers for dependent children***

According to the Law 4512/2018, the “Single children support allowance” is calculated according to the number of dependent children as well as the household equivalent income category.

The equivalence scale assigns a value of 1 to the first household member and of 1/2 to the spouse and of 1/4 to each dependent child. Especially, for single parent families, a value of 1/2 is assigned to the first dependent child and a value of 1/4 to each additional child.

Households that are entitled to the allowance are divided into three income categories according to their income:

- a) Household equivalent income of < EUR 6 000: monthly allowance of EUR 70 for the first child, EUR 70 for the second child and EUR 140 for every additional child.

- b) Household equivalent income of EUR 6 001 – 10 000: monthly allowance of EUR 42 for the first child, EUR 42 for the second child and EUR 84 for every additional child.
- c) Household equivalent income of EUR 10 001 – 15 000: monthly allowance of EUR 28 for the first child, EUR 28 for the second child and EUR 56 for every additional child.

## Main Changes in the Tax/benefit System since 2016

The changes in the tax and benefit system since 2016 include the following:

- A new income tax scale was introduced with Law 4646/2019 for tax years 2020 and onwards, reducing the tax rate for the lower tax bracket (income up to EUR 10 000) from 22% to 9%; for the calculation of tax reduction, (s. 1.1.2.1.)
- The standard tax credit for taxpayers with dependent children was further increased with Law 5045/2023
- Law 5073/2023 introduced a deemed income alternative minimum tax for individuals involved in entrepreneurial activity, the self employed and freelancers. An individual engaged in such activity is deemed to earn a minimum annual income from business activity which cannot be lower than the annual gross minimum wage or the amount corresponding to the gross earnings of the highest-paid employee, whichever is higher.
- Social security contributions have been reduced since 2020 by 3.9 %. Since 1 June 2022, supplementary pension contributions are reduced, by an equal percentage both for employers and employees, from 6.5 % to 6 % in total (s. table in Section on Mandatory Social Security Contributions to schemes operated within the Government Sector).

## Memorandum items

### *Identification of an AW and method of calculations used*

Methodological note for the estimation of the average annual earnings per employee, for the period 2000 – 2018

### *Terminology and coverage*

The average annual earnings below refer to full time employees for Sectors C to N of ISIC Rev.3.1, before 2008, and for Sectors B to N including Division 95 and excluding Divisions 37, 39 and 75 of ISIC Rev. 4, for 2008 onwards.

### *Data sources*

In the estimation procedure of the average annual earnings per employee, for the period 2000-2018 the following data are taken into account:

- Annual earnings and number of employees, as derived from the Structure of Earnings Survey (SES), of the years 2002, 2006, 2010, and 2014.
- Hours worked and annual average number of employees, as derived from the Labour Force Survey (LFS), of the years 2000 – 2018.
- Average annual earnings indices, as derived from the Indices on Quarterly Labour Cost Survey, of the years 2000 – 2018.

Annual Gross Earning per full time employee B-N 2000-2023 Greece	
Year	NACE Rev 2 classification
2000	15 459
2001	15 716

<b>2002</b>	<b>17 359</b>
2003	19 240
2004	21 446
2005	22 013
<b>2006</b>	<b>23 800</b>
2007	23 935
2008	23 850
2009	24 569
<b>2010</b>	<b>24 156</b>
2011	23 883
2012	23 277
2013	21 048
<b>2014</b>	<b>21 322</b>
2015	20 455
2016	19 991
2017	19 859
<b>2018</b>	<b>19 924</b>
2019	20 301
2020	18 709
2021	20 057
2022	22 182
2023	24 059

Note:

- The Average gross Annual Earnings per **full time employee** for the period 2000 to 2023 **includes**:
  - The special payments for shift and night work, as well as work during weekends and holidays;
  - The total annual bonuses as well as those that are regularly paid on a monthly basis, the 13th salary (Christmas salary, where applicable) and 14th salary (Easter and vacation payments, where applicable).
  - The annual bonuses based on productivity.
  - The education and working time allowance.
  - The marriage and children allowance.
- and excludes**:
  - The annual payments in kind: foods, drinks, footwear, clothes, accommodation, business cars provided, mobile phones, etc.
  - The annual premiums related to profit-sharing schemes.
- The data for 2019 and onwards will be revised when the final results of the SES 2022 will be available. Data for 2021 have been revised due to correction for LCI\_Wages 2021.
- Data in bold refer to data from SES 2002, 2006, 2010, 2014 and 2018.
- It should be noted that the data with reference years 2000 - 2005 are different from those of the succeeding years with regard to the source that was used for the calculation of the LCI\_Wages. For the years 2000 - 2005 the index was calculated on the basis of data from National Accounts deriving from administrative sources, while for the years 2006 - 2022 the calculation of LCI\_Wages was based on the quarterly Labour Cost Survey.
- Finally, we would like to inform you that the data refer to the mean yearly gross income for full-time paid employees, regardless of: Marital status – Number of children – Employer's contributions – Taxes paid.

Source: ELSTAT

### **Main employers' contributions to private pension, health, and related schemes**

Contributions to private pension and sickness schemes made by employers are not added to employees' gross earnings for tax purposes (but they are subject to special taxation entailing extinction of tax liability). Since these contributions are not obligatory for employers, no data is provided by the Hellenic Statistical Authority. Very few employers have adopted such additional insurance schemes.

	Child_weight	0.25	

## 2024 Tax equations

The equations for the Greek system in 2024 are mostly on an individual basis. The level of gross earnings for the principal earner is increased by the spouse and child subsidy paid by the employer.

The functions which are used in the equations (Taper, MIN, Tax etc) are described in the technical note about tax equations. Variable names are defined in the table of parameters above, within the equations table, or are the standard variables “married” and “children”. A reference to a variable with the affix “\_total” indicates the sum of the relevant variable values for the principal and spouse. And the affixes “\_princ” and “\_spouse” indicate the value for the principal and spouse, respectively. Equations for a single person are as shown for the principal, with “\_spouse” values taken as 0.

	Line in country table and intermediate steps	Variable name	Range	Equation
1	Earnings	earn_princ	P	Ave_earn*(1+Married*Wife_sub+ MIN(Children,3)*Child_sub)
		earn_spouse	S	Ave_earn*(1+Married*Wife_sub+ MIN(Children,3)*Child_sub)
2	Allowances:	tax_al	B	SSC
3	Credits in taxable income	taxbl_cr		0
4	CG taxable income	tax_inc	B	Positive(earn-tax_al)
5	CG tax before credits	CG_tax_excl	B	Tax(tax_inc,tax_sch)-Low_rate *Positive(MIN(Effort_low_band-Low_thrsh,tax_inc-Low_thrsh))
	Solidarity contribution	sol_contr	B	=Solidarity(earn-SSC,Solidarity_sch)
6	Tax credits :	tax_cr	B	Positive(IF(Children>0, tax_cred_1dc*(Children=1)+tax_cred_2dc*(Children=2)+tax_cred_3 dc*(Children>2), tax_cred)-(INT(Positive(earn-tax_cred_thrsh)/1000)*tax_cred_red))
7	CG tax	CG_tax	B	Positive(CG_tax_excl-tax_cr)+sol_contr
8	State and local taxes	local_tax	B	0
9	Employees' soc security	SSC	B	IF(SSC_ceil_use=1,SSC_rate*MIN(earn,SSC_ceil),SSC_rate*earn)
11	Cash transfers			
		fam_netinc	B	(earn – CG_tax – SSC)/(1+IF(Married>0,(Married*Spouse_weight)+(Children*Child_w eight),min(children,1) *Spouse_weight+positive(children-1)*Child_weight))
		cash_trans	B	VLOOKUP(fam_netinc,Child_all,2)*Children
13	Employer's soc security	SSC_empr	B	IF(SSC_ceil_use=1,SSC_rate_empr*MIN(earn,SSC_ceil),SSC_rate _empr*earn)

Key to range of equation B calculated separately for both principal earner and spouse P calculated for principal only (value taken as 0 for spouse calculation) J calculated once only on a joint basis.

## Notes

<sup>1</sup> According to article 72 (74) of Law 4172/2013, as currently in force, the Special Solidarity Contribution of article 43A is abolished for all income acquired from 1.1.2023 onwards.

<sup>2</sup> Namely the Hellenic Federation of Enterprises, the Hellenic Confederation of Professionals, Craftsmen & Merchants, the National Confederation of Hellenic Commerce and the Association of Greek Tourism Enterprises.

# Hungary

---

This chapter includes data on the income taxes paid by workers, their social security contributions, the family benefits they receive in the form of cash transfers as well as the social security contributions and payroll taxes paid by their employers. Results reported include the marginal and average tax burden for eight different family types.

Methodological information is available for personal income tax systems, compulsory social security contributions to schemes operated within the government sector, universal cash transfers as well as recent changes in the tax/benefit system. The methodology also includes the parameter values and tax equations underlying the data.

The national currency is the Forint (HUF). In 2024, HUF 365.7 were equal to USD 1. In 2024, the average worker earned HUF 8 252 579 (Source: Secretariat estimate).

## Personal Income Tax Systems

### Central/federal government income taxes

#### *Tax unit*

The tax unit is, in all cases, the separate individual. In exceptional cases, the employer can become subject to personal income tax, for instance in the case of benefits in kind.

#### *Tax allowances and tax credits*

##### **Standard reliefs**

- Basic reliefs: None.
- Standard marital status reliefs: None.
- Employee Tax credit: Since 1st January 2012 there is no employee tax credit.
- Family tax allowance: For families having children, the basis of income tax can be reduced by the family tax allowance, which amounts to HUF 66 670 per month (for families having one child), HUF 133 330 per month/each dependent (for families having two children) or HUF 220 000 per month/each dependent (for families having at least three children). From 1<sup>st</sup> January 2023 the allowance raised by HUF 66 700 after permanently sick and disabled child. This tax allowance can be applied by a pregnant woman (or her husband) as from the 91<sup>st</sup> day after conception until birth of the child. The tax allowance may be claimed by one spouse or be split between the spouses. As of 1st January 2014, the family tax allowance was extended: families whose combined PIT base is not sufficient to claim the maximum amount of the family tax allowance can deduct the remaining sum from the 7% health insurance contribution and the 10% pension contribution. This measure does not affect the eligibility for social security benefits (pensions, healthcare, transfers, etc.).
- From 1<sup>st</sup> January 2020, mothers who raise or have raised at least four children are exempt from paying personal income tax on their income received from an employer or gained by self-employment.
- From 1<sup>st</sup> July 2020 the regulation of social security contributions have been integrated in a general law. The change has a positive outcome for families with children: the remaining sum of the family tax allowance will be deductible from the entire 18.5% of the new social security contribution of the employees (formerly the 1.5% labour market contribution was not taken into account in the regulation of family tax allowance).
- From 1<sup>st</sup> January 2022, young persons under the age of 25 are exempt from personal income tax payments up to the national average wage calculated in July of the previous year (the threshold is HUF 576 601/month in 2024).
- From 1st January 2023, mothers under the age of 30 are exempt from personal income tax payments up to the national average wage calculated in July of the previous year (the threshold is HUF 576 601/month in 2024)

##### **Main non-standard tax reliefs**

- Trade Union membership dues: Membership dues and contributions paid to trade unions and other corporate bodies of employees are deductible without any restriction.

- Tax credits are made available for physical disability or agricultural activities. Tax deduction is available for those having income from abroad.
- From 1st January 2015 for newly married couples (where it is the first marriage for at least one of the parties) the basis of income tax can be reduced by HUF 33 335 per month for one person of the couple for 24 months.

### *Tax schedule*

The rate of personal income tax amounts to 15%.

### **State and local income taxes**

In Hungary there is no local personal income tax system supplementing the central one.

## **Compulsory Social Security Contributions to Schemes Operated within the Government Sector**

### ***Employees' contributions***

#### *Pensions*

The rate of pension contribution amounts to 10% of gross earnings.

From 1<sup>st</sup> January 2019 retired workers (old age pension) does not have to pay 10% pension contribution on their wage income.

From 1<sup>st</sup> July 2020 employees' social security contributions – currently consisting of separate pension, sickness and labour market contribution items – have been integrated into the single social security contribution. The new regulation includes the extension of the social contribution exemption of retired individuals to all the other gainful activities (previously employment contracts only).

#### *Sickness*

The rate of health security contribution amounts to 7% of gross earnings.

From 1<sup>st</sup> January 2019 retired workers (old age pension) does not have to pay 4% sickness contribution on their wage income. (Previously they had to pay only 4% out of the 7%).

The new regulation from 1<sup>st</sup> July 2020 (2.1.1.) applies for sickness contributions as well.

#### *Unemployment*

The worker must pay, as employees' contribution, 1.5% of gross earnings.

From 1<sup>st</sup> January 2019 retired workers (old age pension) are not charged 1.5% labour market contribution on their wage income.

The new regulation from 1<sup>st</sup> July 2020 (2.1.1.) applies for labour market contribution as well.

#### *Others*

None. The average worker does not have any obligation to pay other contributions than the above mentioned. However, the contribution rates may be different for certain types of income or for certain

groups of income recipients (e.g. employees with pensioner status). None of these exceptions are applicable to the workers taken into consideration in this report.

## ***Employers' contributions***

### *Pensions*

None.

### *Sickness*

None.

### *Unemployment*

None.

### *Others*

From 2012, the employers' social security contributions were merged into the new payroll tax, called social contribution tax. This change is of legal nature, the combined rate remains 27% while the revenue is divided among the pension, health care and labour-market funds. In 2017, the social contribution tax decreased to 22%, and in January 2018, the rate was lowered to 19.5%. In July 2019, the rate was lowered to 17.5% and has decreased by 2 percentage points to 15.5% from 1<sup>st</sup> July 2020. From 1<sup>st</sup> January 2022, the rate was lowered by further 2.5 percentage points and the training levy (1.5%) was abolished, thus making the total employer side contributions 13% (previously 17%).

From 1st January 2013, the Job Protection Act (JPA) introduced new targeted reliefs in the employers' contributions (social contribution tax and training levy) to incentivise the employment of the most disadvantaged groups on the labour market. This measure reduces the standard rate of the employers' contributions up to a cap of HUF 100 000 per month. From 2017, the JPA introduced a permanent reduction of the employers' tax rate by 50% of the current tax rate for:

- employees under 25 years of age,
- employees over 55 years of age,
- employees working in elementary occupations,
- employees working in agricultural occupations.

It also introduced temporary reductions (0% tax rate in the first two years of employment, and 50% of the current tax rate in the third year) for:

- long term unemployed re-entering the labour market,
- people returning to work after child-care leave,
- career-starters.

From 1st January 2015, the budgetary institutions are not eligible for the JPA tax allowances anymore.

From 1<sup>st</sup> January 2019, the JPA is being phased out and new better targeting reliefs were introduced. The new reliefs reduce the standard rate of the employers' contributions up to the cap of the minimum wage.

The minimum wage was HUF 167 400 per month in 2021, raised to HUF 200 000 per month from 1<sup>st</sup> January 2022. From 1<sup>st</sup> January 2023 the minimum wage is 232 000 per month. From 1<sup>st</sup> December 2023 the minimum wage is 266 800 per month

The new reliefs reduce the employers' tax rate by 50% of the current tax rate for:

- employees working in elementary and in agricultural occupations,

In addition, there is a temporary reduction (0% tax rate in the first two years of employment, and 50% of the current tax rate in the third year) for:

- employees returning to labour market (those who had been out of work for at least 6 months out of the preceding 9 months became entitled for a new type of tax allowance )

In addition, there is a temporary reduction (0% tax rate in the first three years of employment, and 50% of the current tax rate in the fourth and fifth year) for:

- mothers with 3 or more children

From 1<sup>st</sup> January 2019, the wage income of retired workers (old age pension) is exempt from social contribution tax.

The new regulation from 1<sup>st</sup> July 2020 (2.1.1.) applies for the social contribution tax of retired workers as well.

The targeted reliefs in the employers' contributions are not considered in the Taxing Wages model.

Social security contributions will have to be paid on other benefits than gross earnings (e.g., grants in kind) and payments (e.g., certain kind of contracts).

## Universal cash transfers

### *Transfers related to marital status*

None.

### *Transfers for dependent children*

Effective from 1 January 2008:

Type of family	HUF per month
For a couple with one child	12 200
For a single earner with one child	13 700
For a couple with two children, per child	13 300
For a single earner with two children, per child	14 800
For a couple with 3 or more children, per child	16 000
For a single earner with 3 or more children, per child	17 000
For a couple with permanently sick and disabled child	23 300
For a single earner with permanently sick and disabled child	25 900

## Main Changes in the Tax/benefit System Since 2010

- The tax base correction was phased out in two steps.
- The employee tax credit was abolished.
- The employees' health care contribution was increased.
- The employers' social security contributions were merged into the social contribution tax (legal change only, rates and base remained unchanged).
- Health contributions on benefits in kind were increased.

- As a temporary measure, a wage compensation scheme was in effect in the form of an employers' SSC credit.
- Targeted employment incentives to boost the employment levels of groups at the margin of the labour force.
- The child tax allowance was extended in 2014 by allowing the deduction of the allowance from employees' SSC.
- The rate of the PIT decreased by 1 percentage point in 2016.
- The rate of family tax benefit for families with two children is gradually increased from 2016 so that it will be doubled by 2019.
- From 2017 the social contribution tax decreased to 22% and from 2018 subsequently to 19.5%.
- From 1<sup>st</sup> of July, 2019 social contribution tax decreased to 17.5%.
- From 1<sup>st</sup> January 2019 retired workers (old age pension workers) doesn't have to pay 10% pension contribution, 4% sickness contribution, employers' social security contributions (social contribution tax and training levy) after their wage income.
- From 1<sup>st</sup> July 2020 employers' social contribution tax decreased by further 2 percentage points to 15.5%.
- From 1<sup>st</sup> July 2020 employees' social security contributions have been integrated into a general regulation. The new regulation includes the extension of the social contribution exemption of retired individuals to all the other gainful activities (previously employment contracts only).
- From 1<sup>st</sup> January 2022, the rate was lowered by further 2.5 percentage points and the training levy (1.5%) was abolished, thus making the total employer side contributions 13% (previously 17%).

## Memorandum Items

### ***Employer contributions to private social security arrangements***

In Hungary the law dealing with the voluntary mutual insurance funds (like pension funds) was enacted on 6 December 1993. From 2019 employers' contributions to these funds are taxed as wages, but employees can apply a 20% tax credit with a limit of HUF 150 000 per year on. The tax authority pays the tax credit directly to a voluntary fund.

From 2019 voluntary insurance contributions paid by the employer are taxable as wages and the employees can apply a 20% tax credit with a limit of HUF 150 000 per year. Insurance contracts signed before 2019 have one-year transitional provision, in case of these contracts contributions paid by the employer are tax exempt till 30% of the minimal wage, above that it's taxable according to an effective personal income tax rate of 17.7% and an effective health contribution of 21.83%.

As from 2008, employer pension institutions can be established. Based on the rules for 2017, the monthly contribution paid to an employer pension institution by the employer of a private worker is not limited and it is taxable according to an effective personal income tax rate of 17.7% and an effective health contribution of 25.96%. From 2018, the effective health contribution is 23.01%. From 2019, voluntary contributions to these funds are taxed as wages.

## 2024 Parameter values

Average earnings/yr	Ave_earn	8 252 579	Secretariat's estimate		
Child allowance (per child)	child_al	1	800 040		
		2	1 599 960		
		3	2 640 000		
		4	2 640 000		
Income tax schedule	tax_sch	0.15			
Social security contributions	SSC_emp	0.185			
Payroll taxes *	SSC_empr	0.13			
	payroll_rate	0			
		# of children	1	2	3+
Transfers for children	CB_rates	0	12 200	13 300	16 000
(monthly)		1	13 700	14 800	17 000

## 2024 Tax equations

The equations for the Hungarian system in 2024 are mostly on an individual basis. But the child allowance can be split between the spouses and cash transfers are calculated only once. This is shown by the Range indicator in the table below.

The functions which are used in the equations (Taper, MIN, Tax etc) are described in the technical note about tax equations. Variable names are defined in the table of parameters above, within the equations table, or are the standard variables "married" and "children". A reference to a variable with the affix "\_total" indicates the sum of the relevant variable values for the principal and spouse. And the affixes "\_princ" and "\_spouse" indicate the value for the principal and spouse, respectively. Equations for a single person are as shown for the principal, with "\_spouse" values taken as 0.

	Line in country table and intermediate steps	Variable name	Range	Equation
1.	Earnings	earn		
2.	Allowances:			
	Children	child_al	P	IF(Children>0, Children*VLOOKUP(Children, child_al, 2), 0)
	Total	tax_al	B	child_al
3.	Credits in taxable income	taxbl_cr	B	0
4.	CG taxable income	tax_inc	P	MAX(0,earn -tax_al)
	CG taxable income	tax_inc	S	Positive(earn_spouse-Positive(tax_al-earn_spouse-SSC_deduction_princ/tax_sch))
5.	CG tax before credits	CG_tax_excl	B	tax_inc*tax_sch
7.	CG tax	CG_tax	B	CG_tax_excl-tax_cr
8.	State and local taxes	local_tax	B	0
	Child tax allowance (Employees' SSC)	SSC_child_cr	P	=MIN(earn_princ*SSC_emp,Positive(tax_al-earn_princ)*tax_sch)
	Child tax allowance (Employees' SSC)		S	=MIN(earn_spouse*SSC_emp,Positive(-earn_princ)*tax_sch)
9.	Employees' soc security	SSC	B	earn*SSC_emp-SSC_child_cr
11.	Cash transfers	cash_trans	J	Children*(VLOOKUP((1-Married), CB_rates, MIN(Children, 3)+1)*12)
13.	Employer's soc security	SSC_empr	B	earn*SSC_empr
	Employer's payroll taxes	Payroll	B	earn*payroll_rate

Key to range of equation B calculated separately for both principal earner and spouse P calculated for principal only (value taken as 0 for spouse calculation) J calculated once only.

# Iceland

---

This chapter includes data on the income taxes paid by workers, their social security contributions, the family benefits they receive in the form of cash transfers as well as the social security contributions and payroll taxes paid by their employers. Results reported include the marginal and average tax burden for eight different family types.

Methodological information is available for personal income tax systems, compulsory social security contributions to schemes operated within the government sector, universal cash transfers as well as recent changes in the tax/benefit system. The methodology also includes the parameter values and tax equations underlying the data.

The national currency is the Króna (plural: Krónur) (ISK). In 2024, ISK 137.96 were equal to USD 1. That year, the average worker is expected to earn ISK 11 811 028 (Secretariat estimate).<sup>1</sup>

## Personal Income Tax System

### Central government income taxes

#### *Tax unit*

Income is taxed on an individual basis, except for capital income of married couples which is taxed jointly.

#### *Tax allowances and credits*

#### **Standard reliefs**

- Basic tax credit: A fixed tax credit, amounting to ISK 779 112 in 2024, is granted to all individuals 16 years and older, regardless of their marital status. The tax credit is deducted from levied central and local government taxes. Unutilised tax credits or portions thereof are wastable, i.e., non-refundable, and non-transferable between tax years.
- Standard marital status relief: Married couples and civil partners may utilise up to 100% of each spouses' unutilised portion of his/her basic tax credit. Joint taxation also allows for bracket sharing between partners. If one partner has income in the highest tax bracket while the other's income falls below the top bracket, one-half of the latter's unused second bracket amount can be transferred to the high-income partner, up to a limit equal to half the second bracket. This transfer is then taxed at a rate lower than the top tax rate.
- Relief(s) for children: None.
- Relief(s) for compulsory pension contributions: The compulsory payment to pension funds amounts to 4% of wages and is deductible. In addition, an optional payment of up to 4% of wages may also be deducted. As the additional 4% contribution is optional, it is viewed as a non-standard relief in this Report.

#### **Main non-standard tax reliefs applicable to an AW**

- Interest payment relief: A fully refundable tax credit is granted to purchasers of personal dwellings (homes) to recuperate a part of mortgage-related interest expenses. The maximum tax related interest credit in 2024 is ISK 420 000 for a single person, ISK 525 000 for a single parent and ISK 630 000 for a married couple. The following constraints apply to interest rebates: (1) they cannot exceed 7.0% of the remaining debt balance incurred in buying a home for one's own use. (2) The maximum amount of interest payments that qualify for an interest rebate calculation is ISK 840 000 for an individual, ISK 1 050 000 for a single parent and ISK 1 260 000 for a couple. (3) 8.5% of taxable income is subtracted from the interest expense. (4) The rebates begin to be curtailed at a net worth threshold of ISK 7 500 000 for a single individual and a single parent and ISK 12 000 000 for a couple and are eliminated altogether at a 60% higher amount, or ISK 12 000 000 and 19 200 000, respectively. (These amounts are based on income in the year 2024 but are paid out in 2025).

#### *Tax schedule*

The income tax base is composed of personal income (e.g. wages, salaries, fringe benefits, pensions, etc.), which is taxed on an individual basis, and capital income which is taxed jointly for married couples.

The tax on personal income is triple rated. The central government income tax rate in 2023 is 16.55% for income up to ISK 446 136 per month. The tax rate is 23.05 % for income ISK 446 137 to ISK 1 252 501. For income exceeding ISK 1 252 501 the tax rate is 31.35%. Tax relief is provided by the basic credit described in the Section on Standard Reliefs. As a result of the basic credit, personal income is free of income tax for personal income up to ISK 206 245 per month (ISK 2 474 943 per year), when accounting for the deductible, compulsory pension payments.

The tax on capital income is 22%. It is levied on all capital income of individuals, such as interest, dividends, rents etc. Interest income up to ISK 300 000 per year and 50% of income from long-term rent of a maximum of two residential properties is tax free.

Fee to the national broadcast media: 16- to 70-year-old individuals with taxable income over ISK 2 474 943 for the year are subject to a fixed tax of ISK 21 400 in 2023, which will be collected in 2024.

### ***Local government income tax***

The local government income tax base is the same as the central government's personal income tax base.

The local governments' income tax is single rated, but the rate varies between 12.44% and 14.97% between municipalities. The weighted average rate in 2023 is 14.93 %.

## **Compulsory Social Security Contributions to Schemes Operated Within the Government Sector**

### ***Employees' contributions***

Fee to the Retiree Investment Fund: 16- to 70-year-old individuals are subject to a fixed tax of ISK 14 093 in 2023, provided the individual's taxable income is at least ISK 2 474 943 for the year. This tax will be collected in 2024.

### ***Employers' contributions***

Employers pay a social security tax on total wages of 6.25%. In addition, 0.65% is levied on the wages of fishermen as a premium for their government accident insurance. Other taxes, levied on the social security tax base, but based on other legislation, are the 0.05% Wage Guarantee Fund Fee and a payroll tax, the Promote Iceland Market Fee, also 0.05%. Furthermore, a new financial activities tax was introduced in 2012, which requires financial and insurance companies to pay an additional 5.5% payroll tax.

## **Universal Cash Transfers**

### ***Marital status related transfers***

None.

### ***Transfers for dependent children***

Child benefits are granted for each child, subject to income thresholds. In 2023 they are as follows (in ISK per year):

- For each child under the age of seven: 130 000
- Children under the age of eighteen at the end of 2023:

- Benefits for couples
  - Each child: 328 000
- Benefits for single parents:
  - Each child: 489 000
- Income threshold for benefit curtailment:
  - For couples: 11 000 000
  - For a single parent: 5 500 000
- Curtailment of benefits (children under the age of seven only):
  - For each child: 4%
- Curtailment of benefits (all children under the age of eighteen):
  - 4% regardless of the number of children

Note that child benefits in this Report are based on income in the year 2023 but are paid out in 2024 (see also the section on the revisions of the child benefit system).

## Main Changes in the Tax/Benefit System Since 1998

### *The deductibility of the payment to pension funds*

All employees are required to participate in pension funds. The employee contribution is generally 4% of wages and the employer contribution was 6% and increased to 8% as of beginning 2007. On July 1<sup>st</sup>, 2016, the employer contribution increased to 8.5% and one year later it increased again to 10%. The employer contribution increased once again on July 1<sup>st</sup>, 2018, to 11.5%. Both contributions are deductible from income before tax. In some cases, the contributions of employees and employers are higher. An optional, additional payment from employees of up to 4% of wages is also deductible and goes into an individual retirement account. However, from 2012 to mid-2014, this additional payment was temporarily set at 2%.

This voluntary pension savings option was first introduced in 1999 in order to encourage personal saving. At the time the contribution rate was 2% for employees and 0.2% for employers. In May 2000 these rates were doubled to 4 and 0.4%, respectively, as noted above. In addition, some employers, such as the central government, have increased their employer counter-contribution by agreement with employees. The central government contributed 1% against a voluntary employee contribution of 4% in 2001 and 2% as of the beginning of 2002. All such contributions are tax-deductible, both with the employer and the employee at the time the contribution is made. The actual pension is taxed as personal income when it is drawn. As of the beginning of 2004, the employer option of deducting the above 0.4% against the social security tax was abolished. Since such employer counter-contributions had become part of wage agreements in most cases, it was no longer felt that such a tax incentive was needed.

### *Central and local income tax rates in 1997-2024*

In 1997–2007, the Government pursued a policy of reducing the marginal tax rate, as can be seen in the table below. This development was reversed in 2009 when income tax was raised by 1.35 percentage points in response to the Treasury's rising debt burden brought on by the economic crisis. At the beginning of 2010, the tax system was changed from single rated to triple rated. The tax rate was set at 24.1% for the first monthly ISK 200 000 but it was raised by 2.9% for the next ISK 450 000 and again by 6% for income in excess of ISK 650 000. In 2017, the tax system was changed to double rated and in 2020 another tax bracket was added, changing it back to triple rated. The rates in 2023 are 16.78% for income up to ISK 409 986 per month, 23.28% for income exceeding that up to ISK 1 151 012 and 31.58% for income

higher than ISK 1 151 012; see Tax schedule section for further details. From 1998 onwards, the central government and average local government personal income tax rates have been as follows:

	Central government general tax rate (%)	Municipal tax rate (%)	Total tax rate (%)	Central government surtax (%)
1998	27.41	11.61	39.02	7.00
1999	26.41	11.93	38.34	7.00
2000	26.41	11.96	38.37	7.00
2001	26.08	12.68	38.76	7.00
2002	25.75	12.79	38.54	7.00
2003	25.75	12.80	38.55	5.00
2004	25.75	12.83	38.58	4.00
2005	24.75	12.98	37.73	2.00
2006	23.75	12.97	36.72	0
2007	22.75	12.97	35.72	0
2008	22.75	12.97	35.72	0

### ***A special tax on higher income***

In 1998, the special tax on higher income was raised by 2 percentage points, from 5 to 7%. For 2003-income, it was reduced back to 5%. It was reduced to 4% for 2004 income and to 2% for 2005-income. In the fiscal year 2006, the tax was abolished. In the latter half of 2009 the special tax on higher income was introduced again at 8%. In 2010 the tax system changed to triple-rated and in 2017 it was changed to double rated. In 2020 a triple-rated tax system was reintroduced; see Tax schedule and Central and local income tax rates in 1997-2024 sections.

### ***A revision of child benefit system***

Child benefits are granted for each child, subject to income thresholds. The amendments to tax legislation that came into effect in 2004 included a schedule for raising child benefits. As from 2007, the child benefits will be paid for children up to 18 years old instead of 16 years old. For 2013–2023, benefits are as follows (in ISK per year):

	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023
For all children under the age of seven	100 000	115 825	119 300	122 879	133 300	140 000	140 000	140 000	148 000	138 000	130 000
<b>Children under the age of eighteen:</b>											
First child	167 564	194 081	199 839	205 834	223 300	234 500	234 500	234 500	248 000	295 000	328 000
Each additional child	199 455	231 019	237 949	245 087	265 900	279 200	279 200	279 200	295 000	295 000	328 000
<b>Benefits for single parents:</b>											
First child	279 087	323 253	332 950	342 939	372 100	390 700	390 700	390 700	413 000	440 000	489 000
Each additional child	286 288	331 593	341 541	351 787	381 700	400 800	400 800	400 800	423 000	440 000	489 000
<b>Income threshold for benefit curtailment:</b>											
For couples	4 800 000	4 800 000	4 800 000	5 400 000	5 800 000	7 200 000 / 11 000 000	7 800 000 / 11 000 000	8 424 000 / 11 000 000	9 098 000 / 12 320 000	9 500 000	11 000 000
For a single parent	2 400 000	2 400 000	2 400 000	2 700 000	2 900 000	3 600 000 / 5 500 000	3 900 000 / 5 500 000	4 212 000 / 5 500 000	4 549 000 / 6 160 000	4 750 000	5 500 000
<b>Curtailment of benefits under the age of seven:</b>											
For each child	3%	4%	4%	4%	4%	4%	4%	4%	4%	4%	4%
<b>Curtailment of benefits under the age of eighteen:</b>											
For one child	3%	4%	4%	4%	4%	4% / 5.5%	4% / 5.5%	4% / 5.5%	4% / 5.5%	4%	4%
For two children	5%	6%	6%	6%	6%	6% / 7.5%	6% / 7.5%	6% / 7.5%	6% / 7.5%	6%	4%
For three children or more	7%	8%	8%	8%	8%	8% / 9.5%	8% / 9.5%	8% / 9.5%	8% / 9.5%	8%	4%

### ***A revision of interest rebates***

In 2004, the interest rebate was cut by 10%, effective for that year only. The ceiling on interest payments that qualify for the interest rebate was reduced from 7% to 5.5% in 2005 and the interest rate cut was reduced from 10% to 5%. As of the beginning of 2006, the ceiling was further reduced to 5%. In 2005 and again in 2007 the net worth ceiling was lifted considerably in reaction to the increase in net worth due to the house price boom in 2005–2007. In 2008, as mortgage-related interest expenses surged, the ceiling on interest payments was raised back to 7% and the maximum rebate amount increased by 37%. These measures stayed in effect in 2009. In 2010 the maximum rebate amount increased by 47–62% and the net worth ceiling was reduced significantly. The rate of taxable income which is subtracted from the interest expense was increased from 6% to 8% and further to 8.5% in 2014. In addition to the ordinary interest payment relief, a temporary interest cost rebate was in effect in 2010–2011. In 2022 the net worth ceiling was raised by 50% for all households; see section on Main non-standard tax reliefs applicable to an AW.

### ***Transferability of basic tax credit between spouses***

The basic tax credit was made transferable between spouses in stages; see the section on Standard reliefs above. In fiscal year 2001, 90% of the credit became transferable, rising to 95% in 2002 and 100% in 2003.

## **Memorandum Items**

### ***Identification of AW (only eight categories) and valuation of earnings***

The data on average earnings refers to average workers in eight categories according to the NACE rev. 2 classification which corresponds to the ISIC rev.4 system. The categories are C – Manufacturing, D – Electricity, gas, steam and air conditioning supply (from 2008), E – Water supply; sewerage, waste management and remediation activities (from 2008) F – Construction, G – Wholesale and retail trade, repair of motor vehicles, motorcycles, H – Transport, storage, and J – Information and communication K – Financial and insurance activities. Public sector employees are not included. Together, these categories comprise approximately 80% of Iceland's private sector labour force.

The original data are obtained from a monthly survey among Icelandic firms with 10 or more employees.

### ***Employer contributions to private pension funds, health and related schemes***

By law, all employees and employers must contribute to pension funds. These funds are private and form the second pillar pension protection. The private pension funds are not part of the basic, first pillar, government-run social security system, to which a social security tax is paid as described under the Employers' contributions section above. Compulsory and voluntary payments to such funds are described in the payment to pension funds section above.

additional reduction rate (for higher income)	SA_redn_4		
Special child benefit supplement:			
Households receiving other child benefits	SCBS_high		
Households not receiving other child benefits	SCBS_low	0	

## 2024 Tax equations

The equations for the Iceland system are mostly on an individual basis. But the tax credit for married couples is relevant only to the calculation for the principal earner and child benefit is calculated only once. This is shown by the Range indicator in the table below. The functions which are used in the equations (Taper, MIN, Tax etc) are described in the technical note about tax equations. Variable names are defined in the table of parameters above, within the equations table, or are the standard variables “married” and “children”. A reference to a variable with the affix “\_total” indicates the sum of the relevant variable values for the principal and spouse. And the affixes “\_princ” and “\_spouse” indicate the value for the principal and spouse, respectively. Equations for a single person are as shown for the principal, with “\_spouse” values taken as 0.

	Line in country table and intermediate steps	Variable name	Range	Equation
1.	Earnings	earn		
2.	Allowances:	tax_al	B	earn*pension_rate
3.	Credits in taxable income	taxbl_cr	B	0
4.	CG taxable income	tax_inc	B	earn-tax_al
5.	CG tax before credits	CG_tax_excl	B	tax(tax_inc, tax_sch)
6.	Tax credits :	tax_cr	P	MIN(CG_tax_excl_princ,Basic_crd+MAX(Married*Basic_crd- CG_tax_excl_spouse-(tax_inc_spouse*local_rate),0))
			S	MIN(Married*Basic_crd, CG_tax_excl_spouse)
	Broadcast fee		B	broadcast_fee*(earn>SSC_thrsh)
		special_tax	J	0
7.	CG tax	CG_tax	B	CG_tax_excl-tax_cr+special_tax+Broadcast fee

9.	Employees' soc security	SSC	B	SSC_fixed*(earn>SSC_thrsh)
11.	Cash transfers:			
	Total family income	inc_tot	J	earn_total
	Child allowance	cash_trans	J	IF(Children = 0, 0, IF(AND(Married = 1, Children = 1),SA_first_m - MAX(0, (EARN*(1-pension_rate)) - SA_thresh_m) * SA_redn_1 - (MAX(0, (EARN*(1-pension_rate)) - SA_thresh_m_2) * SA_redn_4) + ((CA * max_child_under7) - MAX(0, (EARN*(1-pension_rate)) - SA_thresh_m) * SA_redn_1), IF(AND(Married = 1, Children = 2), (SA_first_m + SA_others_m) - (MAX(0, (EARN*(1-pension_rate)) - SA_thresh_m) * SA_redn_2) - (MAX(0, (EARN*(1-pension_rate)) - SA_thresh_m_2) * SA_redn_4) + MAX(0, ((CA *max_child_under7) - MAX(0, (EARN * (1 - pension_rate)) - SA_thresh_m) *SA_redn_1)), IF(AND(Married = 0, Children =1), SA_first_s - MAX(0, (EARN*(1- pension_rate)) - SA_thresh_s) * SA_redn_1 - (MAX(0, (EARN*(1- pension_rate)) - SA_thresh_s_2) * SA_redn_4) + ((CA * max_child_under7) - MAX(0, (EARN*(1-pension_rate)) - SA_thresh_s) * SA_redn_1), IF(AND(Married = 0, Children = 2), (SA_first_s + SA_others_s) - (MAX(0, (EARN*(1-pension_rate)) - SA_thresh_s) * SA_redn_2) - (MAX(0, (EARN*(1-pension_rate)) - SA_thresh_s_2) * SA_redn_4) + MAX(0, ((CA * max_child_under7) - MAX(0, (EARN * (1 - pension_rate)) - SA_thresh_s) * SA_redn_1)), 0 ))))
12.	Special child benefit supplement	SCBS	J	IF(Children>0;IF(AY10>0;SCBS_high*Children;SCBS_low*Children);0)
13.	Employer's soc security	SSC_empr	B	earn*SSC_empr_rate

Key to range of equation B calculated separately for both principal earner and spouse P calculated for principal only (value taken as 0 for spouse calculation) J calculated once only on a joint basis.

**Note**

<sup>1</sup> The definition of average worker in Iceland includes workers in five categories. See section on Identification of AW (only eight categories) and valuation of earnings.

# Ireland

---

This chapter includes data on the income taxes paid by workers, their social security contributions, the family benefits they receive in the form of cash transfers as well as the social security contributions and payroll taxes paid by their employers. Results reported include the marginal and average tax burden for eight different family types.

Methodological information is available for personal income tax systems, compulsory social security contributions to schemes operated within the government sector, universal cash transfers as well as recent changes in the tax/benefit system. The methodology also includes the parameter values and tax equations underlying the data.

The national currency is the Euro (EUR). In 2024, EUR 0.92 was equal to USD 1. In that year, the average worker earned EUR 64 158 (Secretariat estimate).

## Personal income tax systems

### Central/ federal government income taxes

#### *Tax unit*

Tax is levied on the combined income of both spouses. Either spouse may, however, opt for separate assessment, in which case the tax payable by both spouses must be the same as would be payable under joint taxation. A further option allows either spouse to opt for assessment as single persons in which case they are treated as separate units. The calculations presented in this Report are based on family taxation.

#### *Tax credits*

##### **Standard reliefs:**

- Basic reliefs: The single person's credit is EUR 1 875 per year.
- Standard marital status reliefs: The married person's credit is EUR 3 750 per year (i.e. twice the basic credit of EUR 1 875).
- Employee credit: This is a non-transferable tax credit. With the exception of certain company directors and their spouses and the spouses of partners in partnership cases, all employees, including (subject to certain conditions) children who are full-time employees in the business of their parents, are entitled to an employee credit of EUR 1 875.
- Earned Income credit: Individuals in receipt of earned income are entitled to an earned income credit of EUR 1 875. Note: The combined employee credit and earned income credit is limited to EUR 1 875.
- One-Parent Family credit: The single parent family credit is EUR 1 750.

##### **Main non-standard tax reliefs applicable to an AW**

- Medical Insurance: Relief at the taxpayer's standard rate of tax is available for taxpayers who make a payment to an authorised insurer under a contract which provides for the payment of medical expenses resulting from sickness of the person, his wife, child or other dependants. The maximum relief is EUR 1 000 in respect of an adult and EUR 500 in respect of a child. This relief is now granted at source and is paid to the insurance provider.
- Work related Expenses: These are relieved to the extent that they are wholly, exclusively and necessarily incurred in the performance of the duties of an employment.
- Home Carers Allowance: This is a tax credit of EUR 1 800 for families where one spouse works at home to care for children, the aged or incapacitated persons, where the carer spouse's income does not exceed EUR 7 199. A reduced measure of relief is granted for income between EUR 7 200 and EUR 10 800: if the income exceeds EUR 7 200 the tax credit is reduced by one half of the income of the Home Carer that exceeds this limit. This credit and the increased standard rate tax band for two income couples (see tax schedule below) are mutually exclusive but the person may opt for whichever is the more beneficial. If the Home Carer earns income of up to EUR 7 200 in his/her own right for the tax year, the full tax credit may be claimed. For the purposes of this tax credit, income means any taxable income such as income from a part-time job, dividends, etc. but does not include the Carer's Allowance payable by the Department of Social Protection.

*Tax schedule*

Band of taxable Income (EUR)				Rate (%)
Single/ Widow(er)	Married Couple (One Income)	Married Couple (Two Incomes)	One-Parent Families	
Up to 42,000	Up to 51,000	Up to the lesser of 84,000 - 51,000 plus the amount of the lowest income	46 000	20
Balance	Balance	Balance	Balance	40

*Low income exemption and marginal relief tax*

Where total income of an individual aged 65 and over is less than or equal to the income exemption limit that income is exempt from tax.

Exemption limits:

- Single / Widowed: EUR 18 000
- Married: EUR 36 000

The exemption limits may be increased in respect of children, as follows:

- One or two children (each): EUR 575
- Subsequent children: EUR 830

The marginal relief rate of tax applies where liability to tax at the marginal relief rate is less than that which would be chargeable under the normal tax schedule and where total income is less than twice the relevant exemption limit, otherwise tax is charged under the normal tax schedule.

Marginal relief tax is charged, where applicable, at a rate of 40% on the difference between total income and the relevant exemption limit.

*Universal Social Charge (USC)*

The USC is charged on an individualised basis on gross income at 0.5% on income up to and including EUR 12 012, at 2% for income in excess of EUR 12 012 but not greater than EUR 25 760, at 4% for income in excess of EUR 25 760 but not greater than EUR 70 044, and at 8% above that level. The lower exemption threshold is EUR 13 000. The USC does not apply to social welfare payments, including contributory and non-contributory social welfare State pensions.

USC rates for individuals whose total income does not exceed EUR 60 000 and who are (a) aged 70 years and over or (b) who hold full medical cards: The 2% rate applies to all income over EUR 12 012.

There is a surcharge of 3% on individuals who have income from self-employment that exceeds EUR 100 000 in a year.

**State and local income taxes**

No State or local income taxes exist in Ireland.

## Compulsory Social Security Contributions to Schemes Operated within the Government Sector.

### **Employees' contributions**

Contributions are payable at a rate of 4 percent of an employee's gross earnings less allowable superannuation contributions.<sup>1</sup> No distinction is made by marital status or sex. Those earning less than EUR 352 per week are exempt. The following is a breakdown of the 2024 rate of contribution together with ceilings where applicable:

Description	Rate	Threshold (EUR)	Ceiling (EUR)
Pension and social insurance	4.00	352 per week	

A PRSI credit was introduced in 2016 which reduces the amount of PRSI payable for people earning between EUR 352.01 and EUR 441 per week. The credit is tapered and the amount of the credit depends on your earnings. The maximum credit is EUR 12. If you earn between EUR 352.01 and EUR 441 per week, the maximum credit of EUR 12 is reduced by one-sixth of the amount of your weekly earnings over EUR 352.01.

### **Employers' contributions**

Like employees' contributions, employers' contributions are payable as a percentage of gross employee earnings less allowable superannuation contributions. The following is a breakdown of the 2024 rate of contribution:

Description	Rate %
Occupational injuries only (*)	0.50
Pension and social insurance(**)	10.05

\* Applicable to employers with employees exempt from social insurance e.g. those over age 70.

\*\* A lower employer rate of 7.8% applies to employers with employees earning between €38 and €441 per week. These employer rates do not include a 1% levy for the National Training Fund which is collected through the Pay Related Social Insurance (PRSI) system, which makes the actual percentages returned by employers 8.8% (lower rate) and 11.05% (higher rate).

In 2024, the total employers' contribution is 11.05% and is reduced to 8.8% in respect of employees earning less than EUR 441 per week.

## Universal Cash Transfers

### **Transfers related to marital status**

None.

### **Transfers for dependent children**

These are payable to all children under the age of 16 (or under 19 years, if the child is undergoing full time education by day or is incapacitated and likely to remain so for a prolonged period). These payments do not depend on any insurance or on the means of the claimant. The amounts payable in 2024 are as follows:

If you have twins, you get one-and-a-half times the normal monthly rate of Child Benefit for each child. For triplets and other multiple births, Child Benefit is paid at double the normal monthly rate for each child, provided at least 3 of the children meet the conditions (such as being under 16).

Period	Monthly rate per child	
January 2024 to December 2024	First to second child: EUR 140.00	Subsequent children: EUR 140.00

### **Transfers for low-income families**

**Working Family Payment:** A non-taxable family income supplement that is payable to low-income families where either the principal earner and/or the spouse are in full-time employment. Full-time employment is defined as working nineteen hours per week or more. The hours worked by the principal and the spouse can be aggregated for the purposes of this definition. When calculating income for the purposes of the relief superannuation payments, social welfare payments, tax payments, health and employment and training levies are all subtracted to arrive at disposable income.

The level of payment is dependent on the amount of family income and the number of children. The supplement payable is 60% of the difference between the family income and the income limit applicable to the family. A minimum of EUR 20 per week is payable to eligible families. No supplement is payable to families with income in excess of the relevant income limit.

The income limit for a family with two children in 2024 is EUR 746 per week.

**One Parent Family Payment:** This payment is available for men and women who for a variety of reasons are bringing up a child or children without the support of a partner and whose youngest child is aged under 7. The payment which is means tested includes an earnings disregard of €165 per week with earnings over that amount being assessed at 50%. This means that a person with earnings of €165 per week and no other means can receive a full rate payment. The amount of the full payment for 2024 is EUR 232 per week (plus EUR 46 per week for each child).

Although not included in the modelling there are two other payments which are worthy of mention here. **Jobseeker's Transitional Payment** is a means-tested payment for lone parents whose youngest child is aged 7 or over but under age 14 (subject to meeting all of the other qualifying conditions). Also, most social welfare payments include an **Increase for a Qualified Child (IQC)** which may be payable in addition to the personal rate of payment. In 2024 the weekly rates are €46 for a child aged under 12, and €50 for a child aged 12 or over (up to age 22 if in full-time education).

### **One-off payments**

In recognition of the cost of living pressures brought about energy and cost of living inflation pressures, a number of one-off measures were introduced in 2023 And 2024. Most of these one-off payments occurred on the welfare side with the exception of one-off temporary reductions in VAT and excise duty.

The welfare changes are as follows—

- **February Bonus** – This one-off payment provided an extra €200 for all social welfare recipients.
- **Working Family Payment** – in April 2023 a one off payment of €200 was provided to people who receive the Working Family Payment and do not qualify for the extra payment based on another social welfare payment.
- **Child Benefit** - An additional once-off payment of €100 per child to parents who receive Child Benefit was paid in June 2023. Budget 2024 provided a double month's payment of Child Benefit in December 2023.
- **Increase for Qualified Child** – Budget 2024 provided a one-off payment of €100 to people who get an increase for a qualified child, one payment for each child payable the week beginning 27 November 2023.

- Budget 2024 provided People in receipt of long-term payments received a Christmas bonus of a double weeks' payment in December 2023 and a further double weeks' payment in January 2024.
- A lump sum payment of €300 was paid to recipients of the Fuel Allowance in November 2023.

Budget 2023 one-off measures:

- Double weeks payment to recipients of most social welfare payments in October 2022;
- €400 lump payment to all households receive the Fuel Allowance (November 2022);
- €200 lump sum payment for pensioners with a disability receiving the Living Alone Allowance (November 2022);
- €500 lump sum payment to all families in receipt of the Working Family Payment (November 2022)
- Double Child Benefit Payment in respect of each child (November 2022)
- Double weeks payment to recipients of most social welfare payments in December 2022;

In addition to account for the cost of energy pressures, **Electricity credits** were provided on a non-means tested based. These were announced in September 2022 and rolled on to cover energy bills up to March 2023. The payments were made in 3 instalments with the first payment in November 2022, the second in January 2023, and the third made in March 2023. The Electricity credits are not covered in *Taxing Wages*.

## Other Main Changes in Tax/Benefit System Since 2016

### ***Earned Income credit***

Individuals in receipt of earned income are entitled to an earned income credit of EUR 1 650 for 2021, increasing to 1 700 in 2022. Note: The combined employee credit and earned income credit is limited to EUR 1 775.

### ***Changes to labour taxation due to the COVID pandemic in 2020 and 2021***

The TWSS, EWSS and PUP schemes referred to in previous years reports have ceased. Enhanced Illness Benefit will be in place until the end of September 2022.

## Memorandum Items

### ***Employer contributions to private social security arrangements***

Information not available, although such schemes do exist.

## 2024 Tax equations

The equations for the Irish system in 2020 are mostly on a family basis using mainly a tax credit system for the first time. But social security contributions are calculated separately for each spouse. This is shown by the Range indicator in the table below.

The functions which are used in the equations (Taper, MIN, Tax etc) are described in the technical note about tax equations. Variable names are defined in the table of parameters above, within the equations table, or are the standard variables “married” and “children”. A reference to a variable with the affix “\_total” indicates the sum of the relevant variable values for the principal and spouse. And the affixes “\_princ” and “\_spouse” indicate the value for the principal and spouse, respectively. Equations for a single person are as shown for the principal, with “\_spouse” values taken as 0.

	Line in country table and intermediate steps	Variable name	Range	Equation
1.	Earnings	earn		
2.	Allowances:			(provided at standard rate ( tax credit equivalent))
3.	Credits in taxable income	taxbl_cr	J	0

		other_cr		Empl_al_at_standardrate+ (IF(earn_spouse>0, Empl_al_at_standardrate, 0))
		tax_cr		basic_cr+single_par_cr+other_cr
	Exemption amount	exemp_amt	J	Single_ex+Married*Married_ex+Child_ex*MIN(2, Children)+(Children>2)*(Children-2)*Child_ex_3
	Marginal relief limit	MRL	J	Single_MR+Married*Married_MR+Child_MR*MIN(2, Children)+(Children>2)*(Children-2)*Child_MR_3
7.	Net tax	CG_tax	J	If(earn_total<='MRL,' MIN(marg_rel_rate*positive(earn_total-exem_amt), positive(_tax_excl-tax_cr)), positive(_tax_excl-tax_cr))+USG
8.	State and local taxes	local_tax	J	0
	Employees' soc security			
	weekly allowance	weekly_allce	B	IF(earn=0,0,MINA(Non_cum_Allc,earn))
	Medical card factor	Med_crd_fac	J	(single_med_card+Married*(married_med_card-single_med_card)+child_add_med_card*Children<earn_princ+earn_spouse)
	employees' soc security	SSC	B	=IF(earn>SSC_thresh,(pension_rate*earn)-Positive(SSC_cred_max-(earn-SSC_thresh)*SSC_cred_red)))
11.	Cash transfers			
		Child_benefit	J	Children*Ch_ben+(Children>2)*(Children-2)*(Ch_ben_3-Ch_ben)
		FIS	J	(Children>0)*IF((earn-_tax-SSC+OPF_total)<='FIS_pay_limit', MAXA((FIS_pay_limit-(earn-_tax-SSC+OPF_total))*FIS_rate, FIS_min), 0)

		OPF_basic	P	=IF((earn-opf_inclim_1)*opf_dis<opf_thrsh,opf_basic,IF((earn-opf_inclim_1)*opf_dis>opf_inclim_3,0,Positive(opf_basic- (opf_red+(opf_red*TRUNC((((earn-opf_inclim_1)*opf_dis)-opf_thrsh)/opf_red))))*((Married=0)*(Children>0)))*(earn<opf_inclim_2)
		OPF_total		=IF(OPF_basic>0,OPF_basic+(opf_childincr*Children))
	Total cash transfers	cash_trans		Child_benefit+FIS+OPF_total
13.	Employer's soc security	SSC_empr	B	IF(earn<='Empr_thrsh',' Empr_lower_rate, Empr_rate)* MIN(earn, Empr_ceil)

Key to range of equation:

B calculated separately for both principal earner and spouse

P calculated for principal only (value taken as 0 for spouse calculation)

J calculated once only on a joint basis

## Note

<sup>1</sup> To address long term sustainability challenges facing the Social Insurance Fund and to pay for the introduction of a Pay-Related Benefit scheme for newly unemployed jobseekers, the Government agreed to a series of incremental increases to all social insurance rates from 2024 to 2028. The first increase of 0.1% took effect from 1<sup>st</sup> of October 2024. The employee and employer rates will further increase by 0.1% in October 2025, 0.15% in October 2026, 0.15% in October 2027 and finally a 0.2% increase in October 2028.

# Israel

---

This chapter includes data on the income taxes paid by workers, their social security contributions, the family benefits they receive in the form of cash transfers as well as the social security contributions and payroll taxes paid by their employers. Results reported include the marginal and average tax burden for eight different family types.

Methodological information is available for personal income tax systems, compulsory social security contributions to schemes operated within the government sector, universal cash transfers as well as recent changes in the tax/benefit system. The methodology also includes the parameter values and tax equations underlying the data.

The Israeli currency is the Israeli Shekel (ILS). In 2024, ILS 3.6697 was equal to USD 1. In that year, the average worker in Israel earned ILS 196 756 (Secretariat's estimate).

## Personal income tax system

### **Central government income tax**

#### *Tax unit*

In general, spouses are taxed separately on their earned income, subject to the condition that its sources are independent. The household is taxed jointly if their earned income is deemed to be interdependent. Until 2014, the conditions for interdependence involved situations where one spouse worked in a business that the other spouse either owned or had certain levels of capital or management/voting rights. Since 2014, spouses could still be taxed separately, even in cases where their earned income is deemed to be interdependent if the labour of both spouses is needed to run the business and their income is commensurate to their effort.

#### *Tax allowances and credits*

##### **Standard tax credits**

The standard tax credits are given in the form of credit points subtracted from the tax liability. Each point is worth ILS 2 904 in 2024.

- *Basic credit:* Every resident taxpayer is entitled to 2.25 credit points (ILS 6 534 in 2024).
- *Additional credit for women:* Women are entitled to a further half credit point (ILS 1 452 in 2024).
- *Child credit:* Working mothers (and fathers in one-parent families) with children aged under 18 are entitled to one additional credit point per child (ILS 2 904 in 2024). In 2012 this credit was increased to 2 credit points per child aged under 5. Since 2012, married working fathers with children aged under 2 are also entitled to 2 credit points per child. In 2017, the credit for both parents was increased to 2.5 credit points per child aged under 5. Since, according to the Taxing Wages methodology, the children in the model are between 6 and 11 inclusive, this change was not included in the model. Since 2022, both parents benefit from one extra credit point per child aged between 6 and 12 inclusive. This change was included in the 2022 model. In 2024 both parents benefit from one extra credit point per child aged between 13 and 17 inclusive and two extra credit point per child up to age 3. These changes are not included in the model.
- *Single parent credit:* Single parents (male or female) are entitled to one additional credit point.

##### **Non – standard tax credits applicable to income from employment**

- Tax credits are awarded for contributions to approved pension schemes, up to a ceiling that varies according to the employee's circumstances.
- Workers living in certain development areas or in conflict zones receive credits as a percentage of their income up to ceiling. In 2016, a comprehensive reform was implemented, where the average credit was decreased but the number of beneficiaries more than doubled. In 2022 the credits range from 7 % in the lowest category to 20% in the highest category with ceilings between ILS 146 640 and 259 920. About 20% of the population lives in these areas.
- Up to 2021 new immigrants were entitled to three credit points in their first eighteen months in Israel, two credit points in the following year, and one credit point in the year after. From 2022 new immigrants are entitled to one credit point in their first year in Israel, three credit points in the

following eighteen months, two credit points in the following year, and one credit point in the year after.

- Discharged soldiers receive 2 credit points for three years after the completion of at least 23 months of service or 1 credit point for a shorter service.
- Graduates of academic studies receive 1 credit point for one year (raised to three years in 2023) after the completion of a B.A. degree (or after the completion of 1 700 study hours that led to a professional certificate) and 0.5 credit point for one year (raised to two years in 2023) after the completion of a M.A. degree.

### *Tax schedule*

The tax schedule for earned income in 2024 is as follows:

Taxable income (ILS per year)	Tax rate (%)
0 - 84120	10
84120 - 120720	14
120720 - 193800	20
193800 - 269280	31
269280 - 560280	35
560280 - 721560	47
Above 721560	50

### ***Regional and local income tax***

There are no regional or local income taxes.

## **Compulsory social security insurance system**

Social security contributions consist of a combination of social security contributions and health insurance. The tax rates paid by employees and employers are applied in two brackets:

- A reduced rate for income up to a level of 60% of the average wage per employee post (ILS 7 522 per month in 2024).
- A full rate for income exceeding 60% of the average wage per employee post and up to ILS 49 030 per month (in 2024).

### ***Employees' contributions***

The taxable base for social security insurance contributions paid by employees is the total amount of the gross wage or salary including fringe benefits. The assessment period is the calendar month. The effective employees' contribution rates in 2024 are as follows:

Insurance branch	Full rate contribution ( % )	Reduced rate contribution ( % )
Total for National Insurance branches	7.00	0.40
Health	5.00	3.10
Total contributions	12.00	3.50

### ***Employers' contributions***

Employers on behalf of their employees also pay social security insurance contributions. These relate to National Insurance only - employers do not pay any contributions for health insurance.

The employers' contribution rates in 2024 are as follows:

Insurance branch	Full rate contribution ( % )	Reduced rate contribution ( % )
Total for National Insurance branches	7.60	3.55
Health	--	--
Total contributions	7.60	3.55

### **Payroll taxes**

The following payroll taxes exist in Israel but neither of them is included in the modelling as they have limited coverage:

- Wage tax on the non-profit institutions: the VAT law imposes a 7.5% on the wage-bill on the non-profit sector including Government,
- Wage tax on the financial institutions: the VAT law also imposes a 17.0% tax on the wage-bill of the financial institutions.

### **Universal cash transfers**

#### ***Transfers related to marital status***

None.

#### ***Transfers for dependent children***

A monthly child allowance is paid to the parent (usually the mother) of unmarried children aged up to 18. Between 2003 and 2022, children born before 2003 benefited from a more generous allowance.

In December 2015 (retroactively from May 2015) the allowance for all children were increased.

Moreover, the government deposits ILS 50 per child per month, starting with May 2015 (for the period May 2015-December 2016, the actual deposit was only delivered, in 36 equal instalments, between January 2017-December 2019). The savings are liquid only when the child turns 18. Considering this delay of cash payments, they do not benefit the household, but rather the child and therefore are not included in the Taxing Wages modelling.

First child	169
Second child	214
Third child	214
Fourth child	214
Fifth child and above	169

In addition, a Study Grant is paid to lone parents with children aged 6 to 18. The grant is paid in one instalment, usually in September at the beginning of the school year. In 2024, the grant per child is ILS 1 137.

## Main changes in the tax and benefit systems since 2002

- There has been a policy of gradually reducing the level of personal income taxes since 2003. This policy was expected to continue till 2016 but came to an end in 2012 with the top tax bracket increasing from 45% to 48% although the rate of one middle income tax bracket was further decreased from 23% to 21%. In 2013 a surtax of 2% was imposed on total income above ILS 811 560, effectively increasing the top marginal rate to 50%. In 2017 the surtax was increased to 3% on total income above ILS 640 000, while the top marginal rate remained unchanged at 50%. In 2013, the value of some tax brackets were not fully indexed to the CPI and even suffered a nominal decrease. In 2014, the value of all tax brackets and of the "credit point" were not indexed to the CPI. In 2017, some tax rates and the width of some tax brackets were changed, effectively decreasing the tax burden for low and mid income while increasing the burden for higher incomes.
- The full contribution rate for employee social security contributions increased gradually from 9.7% in 2002 to 12% in 2006. The reduced contribution rate decreased from 5.76% in 2002 to 3.5% in 2006. The upper threshold for contributions was removed in July 2002 but re-instated one year later. In August 2009, as a temporary measure until December 2011, it was increased to 10 times the average wage per employee post until December 2010 and to 9 times the average wage per employed post until December 2011. Since 2012 the upper threshold is indexed to the CPI and its value against the average wage has eroded to 3.9 times the average wage in 2024.
- Prior to July 2005, there was only one contribution rate for employer social security contributions, set at 5.93% between July 2002 and June 2005. The upper threshold for contributions was removed in July 2002 but was re-instated one year later. The current system of two tax brackets was introduced in July 2005 with a reduced contribution rate of 5.33% and a full rate of 5.68%. There has been a lowering of rates in each year between 2006 and 2009. In August 2009, as a temporary measure until March 2011, the reduced rate was increased from 3.45% to 3.85%. In April 2011 the regular rate was increased to 5.9%. It was increased again to 6.5% in January 2013, 6.75% in January 2014, 7.25% in January 2015, 7.5% in January 2016 and 7.6% in January 2019.
- The Employers tax on wage bill of the non-profit sector excluding Government was abolished in 2008.
- In the period between August 2003 and June 2009, all children that were born on or after 1 June 2003 received the same level of benefit payment as the first child. The 2009 Coalition agreement introduced a gradual increase in the benefit payments for the second, third and fourth children in all families (including those where children were born after June 2003) over a period of four years from July 2009 to Apr 2012. In August 2013, the allowance for all children born after June 2003 was decreased to ILS 140 per month per child. In December 2015 (retroactively from May 2015) the allowance for all children were increased.
- In 2017, the tax credit for both parents was increased to 2.5 credit points per child aged under five. Since 2022, both parents benefit from one extra credit point per child aged between 6 and 12 inclusive. This change was included in the 2022 model. Since 2024 both parents benefit from one extra credit point per child aged between 13 and 17 inclusive and two extra credit point per child up to the age of 3.
- The tax benefits for new immigrants arriving in 2022 onwards were increased.

### ***Changes to labour taxation due to the covid-19 pandemic***

People entitled to the EITC and who worked during the pandemic in April-December 2020 got a special bonus (see details in paragraph 6.3).

## Memorandum items

### *Average gross annual wage earnings calculation*

The average wage figures represent the amount earned for a full time post by employees working 35 hours per week or more. Until 2011, the AW data came from a combination of two sources - the income and expenditure survey and the labour force survey. Since 2012, the data come exclusively from the income and expenditure survey as the labour force survey has no more data on income. The Central Bureau of Statistics has now computed a new AW series based exclusively on the income and expenditure survey back from 2000. In 2019 the series was again revised retroactively from 2000 due to several methodological changes introduced in the Household expenditure survey.

As to the economic classification, until 2012, Israel used a modified version of ISIC 3 where the B-I industries (see Table below) are a very close equivalent of C-K industries in ISIC 3.1. Israel's Central Bureau of Statistics adopted ISIC 4 in 2012 and the Average Wage used in the modelling is based on ISIC 4 since 2013.

A	Agriculture.
B	Manufacturing.
C	Electricity and water supply.
D	Construction (building and civil engineering projects).
E	Wholesale and retail trade and repairs.
F	Accommodation services and restaurants
G	Transport, storage and communication.
H	Banking, insurance and other financial institutions.
I	Business activities.
J	Public administration.
K	Education.
L	Health, welfare and social work services.
M	Community, social, personal and other services.

### *Employer contributions to private pension*

Until 2007, employers were not legally obliged to pay into a pension plan for their employees. Pension rights were guaranteed in collective agreements that covered less than half of the labour force. About one million employees in Israel had no pension arrangement (mainly those earning a relatively low wage, temporary workers and those working for subcontractors).

In 2008, a compulsory employment pension was introduced for employees with a period of employment of at least 6 months. The minimum rate of contributions in January 2024 was 18.5 per cent of the employee's salary (up to the average wage of ILS 12 536 per month), about one third to be paid by the employee and two-thirds by the employer.

### *Earned income tax credit*

A non-wastable earned income tax credit was introduced in 2008 in selected geographical areas of Israel covering 15 % of the population. Entitlement to this credit is established based on earnings in the previous year. The tax credit was extended to all areas of Israel in 2012 (based on the earnings in 2011 and therefore we already included it in the 2011 version of the model). For mothers of children up to the age of two and for single parents the full coverage started in 2011 (based on earnings in 2010).

By law, workers aged 23 (lowered to 21, in 2022) and over who are the parents of one or two children under the age of 18 (or workers aged 55 and over even without children) and earn at least ILS 2 340 per

month (about 40% of the minimum wage) but not more than ILS 7 050 per month are entitled to a monthly supplement of up to 370 ILS. The corresponding figure for a family with three or more children is ILS 540.

Since 2016, single parents are eligible for the EITC for a wider income range – from ILS 1 440 per month to ILS 10 670 per month (for a single parent of 1-2 children) or ILS 13 030 per month (for a single parent of three or more children).

Since 2013 (based on earnings in 2012), these sums were increased by 50% for working mothers (and fathers in one-parent family).

In 2018, a temporary program offered a 50% bonus to all working fathers and an additional 30% bonus for families with two working parents. This program was discontinued but the 50% bonus for working fathers was reinstated in 2024 and is included in the Taxing Wages modelling for that year onwards.

To help workers specially hurt by the COVID-19 pandemic, a temporary measure (for earnings in 2020 only), added a 62% bonus to the EITC for April-December 2020 (but not less than ILS 990). Therefore, an equivalent annual 46.5% bonus was included in the 2020 Taxing Wages model.

A temporary measure (for earnings in 2022 only), provided an extra 40% bonus to all beneficiaries of the EITC. This measure is included in the Taxing Wages modelling for 2022.

In 2022, the retirement age for women was gradually raised from 62 to 65 and as accompanying measure women, aged 60-67 could opt for a more generous EITC.

In 2024, the Earned Income Tax Credit (EITC) was expanded to provide increased benefits for parents of children under the age of 3. The supplemental EITC is calculated as 28.3% of the parent's monthly earnings above ILS 2,400, with a maximum benefit of ILS 490 per toddler for those earning up to ILS 4,130 per month. For earnings above ILS 7,220, the supplement gradually phases out at a rate of 34.5%, completely tapering off at an income level of ILS 8,580. However, since the Taxing Wages methodology assumes that the children in the model are between 6 and 11 years old, this change was not incorporated into the model.

Families in which both parents work, and their joint income does not exceed ILS 13 550, are entitled to these benefits for each wage-earner. The grant is paid four times a year directly into the account of the eligible persons.

# Italy

---

This chapter includes data on the income taxes paid by workers, their social security contributions, the family benefits they receive in the form of cash transfers as well as the social security contributions and payroll taxes paid by their employers. Results reported include the marginal and average tax burden for eight different family types.

Methodological information is available for personal income tax systems, compulsory social security contributions to schemes operated within the government sector, universal cash transfers as well as recent changes in the tax/benefit system. The methodology also includes the parameter values and tax equations underlying the data.

The national currency is the Euro (EUR). In 2024, EUR 0.92 was equal to USD 1. In that year the average worker earned EUR 35 616 (Secretariat estimate).

## Personal Income Tax

### Central government income tax

#### Tax unit

Spouses are taxed separately.

#### Tax allowances and tax credits

##### Tax allowances

Social security contributions due by law.

##### Tax credits

Italy increased the basic employee tax credit from EUR 1 840 to EUR 1 880 and as from 2014 introduced an additional refundable tax credit of EUR 960 for employees with income between EUR 8 146 and EUR 24 600, with a phase-out for income between EUR 24 600 and EUR 26 600. As from 01/07/2020 the EUR 960 fiscal bonus is not in force and has been replaced by a EUR 1 200 payable tax credit for net income under EUR 28 000, while an additional tax credit was assigned for incomes from EUR 28 000 to EUR 40 000.

As from 2022, Budget Law n. 234/2021 modified the Personal Income Tax (IRPEF). The payable tax credits amount for 2022 is EUR 1 200 for net income under EUR 15 000.<sup>1</sup>

For 2024, the basic employee tax credit for taxpayers with a taxable income up to EUR 15,000 is increased from EUR 1 880 to EUR 1 955 therefore, the *de facto* no-tax area is extended from EUR 8 174 up to EUR 8 500. In order to guarantee that people lying between the old and the new threshold still get the transfer, it is applied a correction of EUR 75, given by the difference between the previous basic employee tax credit and the new one.

The payable tax credits amount from 2022 must be estimated as follows:

Taxable income (EUR)	Fiscal bonus (EUR)
Up to 8 145	0
From 8 146 to 15 000	1200
More than 15 000	0

- Standard tax credits (not refundable)

The PAYE tax credit is defined as a function of net income:

Taxable income (EUR)	PAYE tax credit (EUR)
Lower than 15 000	1 955
From 15 000 to 28 000	Maximum tax credit + $1190 \times (28\,000 - \text{taxable income}) / 13\,000$
From 28 001 to 50 000	Maximum tax credit $\times (50\,000 - \text{taxable income}) / 22\,000$
More than 50 000	0

The maximum value for the tax credit depends on the level of taxable income:

Level of taxable income (EUR)	Maximum tax credit (EUR)
From 8 001 to 14 999	1 955
From 15 000 to 50 000	1 910

- An additional maximum credit amount of EUR 65 applies to taxable income from EUR 25 000 up to EUR 35 000. Tax credits for family dependents (not refundable)

The tax credits for family dependants, which have replaced the former tax allowances, are as follows:

Family tax credit (EUR)*	Amount (EUR)
Spouse	800 decreasing to 0 for net income over 80 000

(\*) Tax credits are granted for family dependents earning less than EUR 2 840.51

The spouse tax credit is calculated as a function of net income:

Level of taxable income (EUR)	Amount of tax credit (EUR)
Up to 15 000	$800 - 110 \times \text{taxable income} / 15\,000$
From 15 001 to 29 000	690
From 29 001 to 29 200	700
From 29 201 to 34 700	710
From 34 701 to 35 000	720
From 35 001 to 35 100	710
From 35 101 to 35 200	700
From 35 201 to 40 000	690
From 40 001 to 80 000	$690 \times (80\,000 - \text{taxable income}) / 40\,000$
More than 80 000	0

As from 1/1/2022 the tax credit for children under 21 years old, the previous family allowance, and some minor measures to support households have been replaced by the new family allowance (the '*Assegno Unico e Universale*'), while for children over 21 years old the previous family allowance still applies. Please see section Cash Transfers for details.

### Main non-standard tax allowances and tax credits

- Other compulsory contributions.
- Periodical benefits allowed to the spouse fixed by judicial authority.
- Charitable donations to certain religious institutions (up to EUR 1 032.91).
- Medical and assistance expenses incurred by handicapped persons.
- Expenses to restore one's own residence at 50% for 2024 of full expenses up to EUR 96 000, apportioned into 10 annual allowances of the same amount.
- Expenses for energy requalification of buildings at 65% for 2024 of full expenses apportioned into 10 annual allowances of the same amount.
- Expenses for the replacement of covers, windows and shutters and for the installation of solar panels (only for hot water production) at 50% of full expenses.

For the following expenses, a tax credit of 19% of each incurred expense is allowed:

- Mortgage loan interest (up to EUR 4 000);
- Most medical expenses that exceed EUR 129.11.
- Payments to insurance funds up to EUR 1 291.14.
- Expenses to attend secondary school and university courses; in case such courses are private, the expenses allowed cannot exceed those foreseen for State courses.

- Expenses for nursery school (up to EUR 632 for each child).
- Rents paid by out-of-town students (up to EUR 2 633).
- Funeral charges up to EUR 1 549.37.
- Expenses for disabled persons.
- Payments to foundations (up to EUR 2 065.83).
- Expenses related to sport activities for children between 5 and 18 years of age (up to EUR 210 per child).
- Personal assistance for non-self-sufficient people if taxable income is under EUR 40 000 (up to EUR 2 100).
- Most veterinary expenses that exceed EUR 129.11 (up to EUR 550).

From 2024, only for individuals with income above 50 000 EUR non-standard tax credits may be claimed for the amount exceeding 260 EUR. This threshold applies to all tax allowances and tax credits charges at a rate of 19% with the only exception being medical expenses. The exemption also concerns payments to political parties and insurance premiums relating to the risks of natural disasters. However, it does not apply to donations made to voluntary organisations.

For the following expenses, a tax credit of 26% of each incurred expense is allowed:

- Donations to political parties (ranging from EUR 30.00 to EUR 30 000.00).
- Donations to non-profit organizations of social utility - ONLUS - (up to EUR 30 000.00).

### *Tax schedule*

As from 2022, Budget Law n. 234/2021 reduced both the number of brackets (from 5 to 4), the number of the tax rates to apply (from 5 to 4) and the central tax rates levels. For 2024, Decree-Law n. 216/2023 incorporated the first two brackets into one. The following tax schedule is applied to taxable income:

Bracket (EUR)	Rate (%)
up to 28 000	23
over 28 000 up to 50 000	35
over 50 000	43

Decree-Law n. 138 of 13th August 2011 introduced the “Contributo di Solidarietà” for the 2011-2013, (extended up to 2016), tax periods, that is a 3% “solidarity contribution” on the portion of income higher than EUR 300 000 (the amount paid is deductible from PIT base). As from 2017 the “Contributo di solidarietà” measure is not in force. Starting from 2011, exemption is provided to taxpayers whose total income consists of retirement income not exceeding EUR 7 500, income from land not exceeding EUR 185.92, income from primary residence as well as income deriving from properties and land not exceeding EUR 500.

### **State and local taxes**

These surcharges are due only by taxpayers who pay the PIT (personal income tax).

#### *Regional surcharge tax*

This surcharge tax has been introduced in 1997. The tax is levied by each region on resident taxpayers' total taxable income (in case net PIT is positive) at a discretionary rate, which must fall within an established range. As from the year 2000 this range is 0.9% – 1.4%.

In December 2011, with the DL 201/2011, the minimum state rate has been increased from 0.9% to 1.23%.

The figure given in the 2024 parameter values table under the heading “Regional and local tax” includes the regional surcharge tax paid in the most representative city which is Rome (Lazio). The regional surcharge of Lazio applies to the whole income with two brackets (1.73% under or equal EUR 15 000 and 3.33% over 15 000). The municipality surcharge in Rome is 0.9% flat.

### *Local surcharge tax*

This surcharge tax has been introduced in 1999. The tax may be levied by each local government at an initial rate that cannot exceed 0.2%. If the tax is levied, the local government can increase the initial rate, on a yearly basis, up to a maximum of 0.5%. Each yearly increase cannot exceed 0.2%. As from 2012, municipalities can increase the rate up to 0.8.

A 0.9 special rate can be introduced by Roma Capitale Local Government.

The figure given in the 2024 parameter values table under the heading “Regional and local tax” includes the local surcharge tax paid in the most representative city which is Rome; the rate is 0.9% as from 2015.

. As from 2015 the rate is not applied to taxpayers with income under EUR 12 000. The ordinary rate is applied if any one of these limits is passed.

The surcharge rates can be adjusted above the fixed roof because of the health care losses.

## **Compulsory Social Security**

### ***Employee contributions***

- Rate and ceiling
  - The average rate is 9.49% on earnings up to EUR 55 008. However, a temporary decrease in rate of social security contributions from 9.49% to 2.49% (-7 p.p.) applies for employees having income up to EUR 25 000 and from 9.49% to 3.49% (-6 p.p.) up to EUR 35 000. The measure is in force from 1/1/2024 until 31/12/2024 (13th month salary excluded).
  - The average rate is 10.49% on earnings over EUR 55 008 and up to EUR 119 650.
  - For earnings exceeding EUR 119 650, the employee pays a fixed amount given by  $(0.0949 \times 55\,008) + 0.1049 \times (119\,650 - 55\,008)$ .
- Distinction by marital status or sex
  - None.

### ***Employer contributions***

- Contributions equal 31.58%<sup>2</sup> on earnings up to EUR 119 650. For earnings exceeding EUR 119 650, the employer pays a fixed amount given by  $0.3158 \times 119\,650$ .
- A General Government employer work-related accident insurance exists in Italy. It is compulsory for employers with employees and contract workers in activities involving the use of machinery and in risky activities as defined by the law. The standard premium to be paid is calculated by applying to remuneration the rates linked to the activity in which the employee works. The rates that vary between 0 to about 13% are provided by a special classification that takes into account the different categories of risk between the various activities. It is not possible to provide a representative or average rate since the contribution rates vary depending on the industrial activities and other factors of risk. Those contributions are not included in the Report.

## Universal Cash Transfers

As from 1/3/2022 the tax credit for children under 21 years old, the previous family allowance, and some minor measures to support households have been replaced by the new family allowance (the '*Assegno Unico e Universale*'). This is a single and universal allowance for children from the 7<sup>th</sup> month of pregnancy until 21 years old, consisting in a monthly cash-transfer calculated on the ISEE (*i.e.*, equivalent economic status indicator), an index accounting both for taxable and exempt incomes and for real estate and financial wealth, made equivalent using a scale accounting for the number of components, the disability of children, and the working status of parents<sup>3</sup>.

The '*Assegno Unico e Universale*' is indexed to inflation, calculated with the National Consumer Price Index for the whole nation CPI (in Italian '*NIC*'). It follows a progressive scheme, implying a maximum amount (EUR 199.39 per month for minors; EUR 96.80 for adult younger than 21 years) for households with less than EUR 17 090.61 of ISEE, and a *décalage* until a minimum amount (EUR 56.97 per month for minors; EUR 28.50 for adult younger than 21 years) for ISEE greater than EUR 45 574.96<sup>4</sup>. It also provides additional bonus for children with disability, large households, children under 3 years old, working parents, and young mother (younger than 21 years old). Such thresholds and amounts are the results of the indexation to the CPI inflation, which accounts for 5.4% in 2024.

## Main Changes

As from 2022, Budget Law n. 234/2021 modified the Personal Income Tax (IRPEF). The tax brackets passed from 5 to 4, with different thresholds, the central tax rates decreased, and the employment tax credits increased (with a modification of the refundable fiscal bonus of EUR 100). For 2024, Decree-Law. 216/2023 incorporated the first two brackets into one.

The tax credit for children and the previous family cash transfer (plus some minor measures<sup>5</sup>) to support households have been replaced by a single and universal allowance, in most cases more generous than the previous benefits. The universal allowance is indexed to inflation.

As from 2024, Budget Law n. 213/2023 introduced a temporary decrease in rate of social security contributions from 9.49% to 2.49% (-7 p.p.) applies for employees having income up to EUR 25 000 and from 9.49% to 3.49 (-2 p.p.) up to EUR 35 000 (13th month salary excluded). The measure is in force from 1/1/2024 until 31/12/2024.

The brackets and the amounts of the new family allowance introduced in 2022 are indexed to inflation (5.4%, based on CPI for 2024) and minor revisions were introduced. In particular, the allowance for children with disabilities has been simplified and increased; the additional bonus for households with 4 children or more was increased by 50%; and two additional bonuses have been introduced for new-borns and numerous households with children under 3.

## Memorandum Item

### *Identification of an AW*

The data refer to the annual earnings of average workers.

***Contributions by employers to private pension, health, etc. schemes***

In addition to the mandatory social security contributions employers may pay contributions to private pension schemes (currently about forty pension funds). Employer's contributions are included in the taxable income of the employee.

Employees may also choose to contribute to the pension funds with all or part of the retirement allowance that is otherwise withheld by the employers. In this case the employee can deduct from his taxable income an amount equal to twice the amount of the contribution paid to fund.

Employer's contributions to private health insurance schemes are not included in the taxable income of the employee up to the limit of EUR 3 615.20.

## 2024 Tax equations

The equations for the Italian system in 2024 are mostly repeated for each individual of a married couple. But the spouse credit is relevant only to the calculation for the principal earner and any child credit which the spouse is unable to use is transferred to the principal. This is shown by the Range indicator in the table below.

The functions which are used in the equations (Taper, MIN, Tax etc) are described in the technical note about tax equations. Variable names are defined in the table of parameters above, within the equations table, or are the standard variables “married” and “children”. A reference to a variable with the affix “\_total” indicates the sum of the relevant variable values for the principal and spouse. And the affixes “\_princ” and “\_spouse” indicate the value for the principal and spouse, respectively. Equations for a single person are as shown for the principal, with “\_spouse” values taken as 0.

	Line in country table and intermediate steps	Variable name	Range	Equation
1.	Earnings	Earn

		fam_all_add	J	=IF(second_earn=0,0,IF(isee<17090.61,34.18*12*children,IF(isee>17090.61,34.18*12*children*(45574.96-isee)/28484.35)))
		fam_all	J	=fam_all_base+fam_all_add
13.	Employer's soc security	SSC_empr	B	=Tax(earn, Empr_sch)

Key to range of equation B calculated separately for both principal earner and spouse P calculated for principal only (value taken as 0 for spouse calculation) J calculated once only on a joint basis.

## Notes

<sup>1</sup> If the income is between 15 001 and 28 000, the 100 euros can be assigned whether the tax credit for employee is lower than the difference between the tax liability and the tax credits for dependents (plus other minor tax credits). These tax credits are those listed in art 15 comma 1, letter a), b), c), comma 1-ter, and art. 16-bis of the TUIR. For more details see art. Law n. 234/2021, art 1, comma 3, letter a).

<sup>2</sup> It includes pension, unemployment assurance, fund for assurance of the severance pay (TFR), fund for the family bonus, ordinary and extraordinary wages guarantee fund (CIG), maternity leave and sickness assurance.

<sup>3</sup> To calculate the tax wedge for the stylized OECD households, we calculate the ISEE based on the taxable income only, not being able to make hypothesis on the wealth.

<sup>4</sup> To calculate the tax wedge for the stylized OECD households, we assume children are under 18 years old and without disabilities.

<sup>5</sup> The minor measures were not affecting the TW calculations.

# Japan

---

This chapter includes data on the income taxes paid by workers, their social security contributions, the family benefits they receive in the form of cash transfers as well as the social security contributions and payroll taxes paid by their employers. Results reported include the marginal and average tax burden for eight different family types.

Methodological information is available for personal income tax systems, compulsory social security contributions to schemes operated within the government sector, universal cash transfers as well as recent changes in the tax/benefit system. The methodology also includes the parameter values and tax equations underlying the data.

The national currency is the Yen (JPY). In 2024, JPY 151.37 were equal to USD 1. In that year, the average worker is assumed to earn JPY 5 426 969 (Secretariat estimate). In Japan, the central government income tax year is a calendar year, and the local government income tax year is from April to March. The calculations in this report are based on the tax rules and rates applicable on January 1st for the central government income tax, and April 1st for the local government income tax.

## Personal Income Tax Systems

### Central government income tax

#### *Tax unit*

Each individual is taxed separately.

#### *Allowances and tax credits*

#### **Standard reliefs**

##### First step deductions:

- *Employment income deduction:* first, the following amounts may be deducted from gross employment income:
  - If gross employment income does not exceed JPY 1 800 000, the deduction is 40 per cent of gross employment income less JPY 100 000. The minimum amount deductible is JPY 550 000, even if the amount of income is very small.
  - If gross employment income exceeds JPY 1 800 000, but not JPY 3 600 000, the deduction is JPY 80 000 plus 30 per cent of gross employment income.
  - If gross employment income exceeds JPY 3 600 000, but not JPY 6 600 000, the deduction is JPY 440 000 plus 20 per cent of gross employment income.
  - If gross employment income exceeds JPY 6 600 000, but not JPY 8 500 000, the deduction is JPY 1 100 000 plus 10 per cent of gross employment income.
  - As of January 2024, if gross employment income exceeds JPY 8 500 000, the deduction is fixed at JPY 1 950 000. However, a certain amount (up to JPY 150 000) is deducted from gross employment income if taxpayers are on care<sup>1</sup>, if they have dependent relatives under 23 years of age, or if they have spouse or dependent relatives on care.

##### Second step deductions:

Second step deductions are calculated using as a “reference income” the earnings from employment *less* the employment income deductions described above. The second step deductions are:

- Basic allowance (Personal deduction): allowance up to JPY 480 000 is given to a resident taxpayer whose reference income does not exceed JPY 25 000 000. The amount of tax allowance gradually decreases once the income exceeds JPY 24 000 000. Specifically, the allowance is JPY 320 000 for a taxpayer with income from JPY 24 000 001 to JPY 24 500 000, JP 160 000 for those from JPY 24 500 001 to JPY 25 000 000, and zero for those above JPY 25 000 000.
- Allowance for spouse(\*): a tax allowance up to JPY 380 000 is given to a resident taxpayer whose reference income does not exceed JPY 10 000 000 and who lives with a spouse whose reference income does not exceed JPY 480 000.

- Allowance for elderly spouse(\*): a tax allowance up to JPY 480 000 is given to a resident taxpayer:
  - whose reference income does not exceed JPY 10 000 000 and
  - who lives with a spouse aged 70 or older, whose reference income does not exceed JPY 480 000.

This allowance may replace the allowance for spouse described above.

- Special allowance for spouse(\*): a tax allowance up to the amount shown in the following table is given to a resident taxpayer whose reference income does not exceed JPY 10 000 000 and who lives with a spouse whose reference income exceeds JPY 480 000 but does not exceed JPY 1 330 000:

Spouse's income JPY	Amount
0–480 000	0
480 001–950 000	380 000
950 001–1 000 000	360 000
1 000 001–1 050 000	310 000
1 050 001–1 100 000	260 000
1 100 001–1 150 000	210 000
1 150 001–1 200 000	160 000
1 200 001–1 250 000	110 000
1 250 001–1 300 000	60 000
1 300 001–1 330 000	30 000
1 330 001 or more	0

(\*) The amounts of the Allowance for spouse, of the allowance for elderly spouse, and of the Special allowance for spouse, decrease gradually when the reference income (as defined above) of the taxpayer is from JPY 9 000 001 to JPY 10 000 000, then they become zero. Specifically, the amounts of the allowances are as follows:

- Reference income not more than JPY 9 000 000: full amount.
- Reference income from JPY 9 000 001 to JPY 9 500 000: full amount\*2/3.
- Reference income from JPY 9 500 001 to JPY 10 000 000: full amount\*1/3.
- Reference income above JPY 10 000 000: no allowance.

Allowance amounts are rounded up to the closest multiple of JPY 10 000. For instance, an amount of JPY 73 333 is rounded to JPY 80 000.

- Allowance for dependents: if a resident taxpayer has dependent children or other dependent relatives who are aged 16 or older, whose reference income does not exceed JPY 480 000, a tax allowance of JPY 380 000 per each is given for each dependent. Two taxpayers cannot receive the allowance for the same dependent.
- Special allowance for dependents: if a resident taxpayer has dependents whose reference income does not exceed JPY 480 000 and who are aged 19 to 22, an allowance of JPY 630 000 is given for each dependent, instead of the allowances for dependents mentioned above. Two taxpayers cannot receive the allowance for the same dependent.
- Allowance for elderly dependent: if a resident taxpayer has dependents who are aged 70 or older whose reference income does not exceed JPY 480 000, there is a tax allowance of JPY 480 000 per each dependent, instead of the allowances for dependents mentioned above. If the dependents are direct ascendants of the taxpayer or their spouse and permanently live with the taxpayer or their spouse, a tax allowance of JPY 580 000 per each dependent is given to the taxpayer.

- Deduction for social insurance contributions: the amount of social insurance contributions for a resident taxpayer or their dependents are deducted from their income without any limit.

### Main non-standard tax reliefs applicable to an AW

- Deduction for life insurance premiums: If a resident taxpayer pays insurance premiums on life insurance contracts and the beneficiary is the taxpayer, his/her spouse or other relatives, the portion of these insurance premiums which does not exceed the limit described below, is deductible from ordinary income, retirement income or timber income.
- In addition, if a resident taxpayer pays insurance premiums for “qualified private pension plan (insurance type)”, and the recipient of the pension payment is the taxpayer or his/her spouse or relatives living with the taxpayer, the portion of such premiums which does not exceed the limit described below, is deductible from ordinary income, retirement income, or timber income.

Annual Premium Paid (JPY)		Deduction
Over	Not over	
	20 000	Total amount of premiums paid (1)
20 000	40 000	(1) $\times 1/2$ + JPY 10 000
40 000	80 000	(1) $\times 1/4$ + JPY 20 000
80 000	--	JPY 40 000

- Furthermore, if a resident taxpayer pays insurance premiums on nursing and medical insurance contracts and part of the nursing/medical care which the taxpayer receives is financed by the insurance, the portion of such premiums which does not exceed the limit described below, is deductible from ordinary income, retirement income, or timber income.
- Deduction for medical expenses: If a resident taxpayer pays bills for medical or dental care for himself/herself or for his/her dependent spouse or other dependent relatives living with him/her and the amount of such expenses (excluding those covered by insurance) exceeds JPY 100 000 or 5% of the total of his/her ordinary income, retirement income, timber income and so on, the excess amount is deductible from his/her ordinary income, retirement income or timber income. The maximum deduction is JPY 2 million.
- Deduction for earthquake insurance premiums: Earthquake insurance premiums up to JPY 50 000 can be deducted from income. Although the income deduction for casualty insurance premiums are basically abolished, the deduction for long-term casualty insurance premiums remains available if contracted before 31 December, 2006. The maximum deduction for long-term casualty insurance premiums is JPY 15 000. If an individual applies for a deduction for both earthquake insurance premiums and long-term casualty premiums, the maximum deductible amount is JPY 50 000 in total.
- Taxpayers can also apply other tax reliefs established by Act on Special Measures Concerning Taxation (such as self-medication taxation system and credit for housing loans). For the year 2024 only, JPY 30,000 for each taxpayer and his/her dependents including spouses shall be cut in central government income tax, and JPY 10,000 in local taxes.

### Tax schedule

Taxable Income (JPY) (*)		Tax Rate (%)	Deductible Amounts for Each Bracket (JPY)
Equal to or over	Less than	(A)	(B)
	1 950 000	5	--
1 950 000	3 300 000	10	97 500
3 300 000	6 950 000	20	427 500
6 950 000	9 000 000	23	636 000
9 000 000	18 000 000	33	1 536 000
18 000 000	40 000 000	40	2 796 000
40 000 000		45	4 796 000

(\*) The fraction of taxable income that is less than JPY 1 000 is rounded down

Tax liability is obtained by multiplying the taxable income by tax rate (A) and deducting the amount (B). For example, income tax due on taxable income of JPY 7 million is:

$$7\,000\,000 \times 0.23 \text{ (A)} - 636\,000 \text{ (B)} = \text{JPY } 974\,000.$$

Finally, the tax amount is increased by 2.1% (\*). This provision will apply in each year from 2013 until 2037.

(\*) The fraction of final tax liability that is less than JPY 100 is rounded down.

### Local taxes (personal inhabitant's taxes)

#### General description of the system

Local taxes in Japan (personal inhabitant's taxes) consist of prefectural inhabitant's tax levied by prefectures and municipal inhabitant's tax levied by cities, towns and villages. The prefectural inhabitant's tax is collected together with the municipal inhabitant's tax by cities, towns and villages.

#### Tax base

Basically, personal inhabitant's taxes (prefectural and municipal inhabitant's taxes) consist of two parts; one is income based tax and the other is a fixed per capita amount. The taxable income of personal inhabitant's taxes is computed on the basis of the previous year's income. The main difference from state tax (income tax) is the amount of income reliefs (tax deductions). For example, the amount of personal deduction is up to JPY 430 000, tax deduction for dependents is JPY 330 000, and tax allowance for spouse is up to JPY 330 000, the amount of specified allowance for dependents is JPY 450 000, etc.

#### Tax rate

- The standard fixed (annual) per-capita amount of Prefectural inhabitant's tax is JPY 1 000.
- The standard fixed (annual) per-capita amount of Municipal inhabitant's tax is JPY 3 000.
- The standard rate of the income-based tax is 10% (Prefectural inhabitant's tax: 4%, Municipal inhabitant's tax: 6%, for ordinance-designated cities, Prefectural inhabitant's tax: 2%, for Municipal inhabitant's tax: 8%).

The personal inhabitant's taxes rate and the income tax rate were changed in the FY 2006 tax reform. Adjusted credit (a form of tax credit) was introduced in order to alleviate the tax burden increase arising from the changes in the tax rates and from the difference between the personal allowances (basic tax allowance, tax allowance for spouse, tax allowance for dependents, special tax allowance for dependents, etc.) for national income tax purposes and for inhabitant tax purposes.

Adjusted credit is applied if the total amount of income is JPY 25 000 000 or less. Amounts of the credit are as follows:

Taxable income for local income tax purposes	The tax credit
JPY 2 000 000 or less	5% of the lesser of: - total amount of differences in personal reliefs between those for income tax purposes and for personal inhabitant's taxes purposes; or - taxable income amount for personal inhabitant's taxes purposes
More than JPY 2 000 000	((total amount of differences in personal reliefs between those for income tax purposes and for personal inhabitant's taxes purposes) – (taxable income amount for personal inhabitant's taxes purposes – JPY 2 000 000)) * 5%. Note: The minimum credit is JPY 2 500

Notes: Local authorities do not levy the per-capita rate and the income-based tax on a taxpayer whose previous year's income does not exceed a certain amount. For example, in special wards of Tokyo, this threshold is calculated as follows:

- per-capita rate:  $(1 + \text{number of spouse and dependent(s) qualified for the allowance for spouse/dependents}) * 350\,000 + 100\,000 (+ 210\,000 \text{ in case the taxpayer has a qualified spouse or dependent(s)})$
- income based tax:  $(1 + \text{number of spouse and dependent(s) qualified for the allowance for spouse/dependents}) * 350\,000 + 100\,000 (+ 320\,000 \text{ in case the taxpayer has a qualified spouse or dependent(s)})$

### *Tax rate selected for this study.*

State tax (income tax) rates as aforementioned. The local tax (personal inhabitant's taxes) rates chosen for the purpose of this Report represent the standard rate.

## **Compulsory Social Security Contribution to Schemes Operated Within the Government Sector**

### ***Employees' contributions***

#### *Pension*

9.15% of total remuneration (standard remuneration and bonuses). The ceiling of standard monthly remuneration amount is JPY 650 000 and ceiling of standard bonus amount is JPY 1 500 000.

#### *Sickness*

Insurance contribution rate varies depending on the insurer.

- Japan Health Insurance Association: 5.00%
- Health insurance associations: 4.66% (average of about 1,400 insurers)

The ceiling of standard monthly remuneration amount is JPY 1 390 000 and ceiling of standard bonus amount is JPY 5 730 000.

#### *Unemployment*

0.6% of total remuneration for Commerce and industry in general except for Business of agriculture, forestry and fisheries, and the rice wine brewing business, and Construction business. It is 0.7% for those exceptions.

#### *Work injury and children*

None.

## ***Employers' contributions***

### *Pensions*

9.15% of total remuneration (standard remuneration and bonuses). The ceiling of standard monthly remuneration amount is JPY 650 000 and ceiling of standard bonus amount is JPY 1 500 000.

### *Sickness*

Insurance contribution rate varies depending on the insurer.

- Japan Health Insurance Association: 5.00%
- Health insurance associations: 4.66% (average of about 1,400 insurers)

The ceiling of standard monthly remuneration amount is JPY 1 390 000 and ceiling of standard bonus amount is JPY 5 730 000.

### *Unemployment*

0.95% of total remuneration for Commerce and industry in general except for Business of agriculture, forestry and fisheries, and the rice wine brewing business, and Construction business. It is 1.05% for Business of agriculture, forestry and fisheries, and the rice wine brewing business, and 1.15% for Construction business.

### *Work injury*

0.25% to 8.8% of total remuneration, the contribution rate depending on each industry's accident rate over the last three years and other factors. There are twenty-eight rates for fifty-four industrial categories at present.

### *Children*

0.36% of total remuneration (Child and Childcare contribution). This contribution is used for child-rearing support measures such as child allowance.

## **Cash Benefits**

### ***Benefits related to marital status.***

Not available.

### ***Benefits for dependent children***

- a) For persons earning incomes below JPY 6 220 000 (if there are dependents, JPY 380 000 per dependent will be added to JPY 6 220 000) per year
  - JPY 15 000 (per month) is paid to parents/guardians for each child who is under 3 years old or for the third or subsequent child from 3 years old until he/she graduates from elementary school.
  - JPY 10 000 (per month) is paid to parents/guardians for each child who is for the first or second child from 3 years old until he/she graduates from elementary school or who is a junior high school student.
- b) For persons earning incomes not less than JPY 6 220 000 (if there are dependents, JPY 380 000 per dependent will be added to JPY 6 220 000) per year
  - JPY 5 000 (per month) is paid to parents/guardians for each child until he/she graduates from junior high school as the Special Interim Allowances.

- For persons earning incomes of JPY 8 580 000 (if there are dependents, JPY 380 000 per dependent will be added to JPY 8 580 000) or more per year are not eligible for the Special Interim Allowances from June 2022 payments.

The income is the principal's gross earnings net of certain deductions (a casualty loss deduction, a medical expenses deduction, deduction for small enterprise-based mutual aid premiums and similar payments, disability deduction, widow deduction, single parent deduction and working student deduction).

### ***Child rearing allowance***

The benefit is available to single mothers who take care of and provide protection to a child. The benefit is available also to single fathers who take care of and provides living expenses, supervision and protection to the child.

It is available until March 31 after the child's 18th birthday or until age 20 for those with specific disabilities. The benefit is not taxable.

Claimants can receive either a full benefit or a partial benefit depending on their income. Amounts for the full benefit over time are as follows:

	Benefit amount (in JPY per month) One child	Additional amount for the second child	Additional amount for the third child and after	
2000/1	42 370	5 000	3 000	
2003/10	42 000			
2004/4	41 880			
2006/4	41 720			
2011/4	41 550			
2012/4	41 430			
2013/10	41 140			
2014/4	41 020			
2015/4	42 000			
2016/4	42 330			
2016/8	42 330	10 000	6 000	
2017/4	42 290	9 990	5 990	
2018/4	42 500	10 040	6 020	
2019/4	42 910	10 140	6 080	
2020/4	43 160	10 190	6 110	
2021/4	43 160	10 190	6 110	
2022/4	43 070	10 170	6 100	
2023/4		44 140	10 420	6 250

The rates and withdrawal rates for the partial payment over time are as follows:

Legislative change	One child		Additional amount for the second child		Additional amount for the third child and after	
	The case of partial payment	coefficient	The case of partial payment	coefficient	The case of partial payment	coefficient
2000/1	28 350	-	5 000	-	3 000	-
2002/8	42 360	0.0187052				
2003/10	41 990	0.0185434				
2004/4	41 870	0.0184913				
2006/4	41 710	0.0184162				
2011/4	41 540	0.0183410				
2012/4	41 420	0.0182890				
2013/10	41 130	0.0181618				
2014/4	41 010	0.0181098				
2015/4	41 990	0.0185434				
2016/4	42 320	0.0186879				
2016/8	42 320	0.0186879	9 990	0.0028844	5 990	0.0017283

2018/4	42 490	0.0187630	10 030	0.0028960	6 010	0.0017341
2018/8	42 490	0.0226993	10 030	0.0035035	6 010	0.0020979
2019/4	42 900	0.0229231	10 130	0.0035385	6 070	0.0021189
2020/4	43 150	0.0230559	10 180	0.0035524	6 100	0.0021259
2021/4	43 150	0.0230559	10 180	0.0035524	6 100	0.0021259
2022/4	43 060	0.0230070	10 160	0.0035455	6 090	0.0021259
2023/4	44 130	0.0235804	10 410	0.0036364	6 240	0.0021748

The benefit is means-tested.

Those with incomes above the threshold for the full benefit receive a partial benefit, and those with incomes above the threshold for the partial benefit receive nothing.

The income measure used is gross annual income minus the employment income deduction minus JPY 80 000 - the amount paid towards public and private insurance premiums.

Income thresholds are based on the number of dependents (see the following table):

Number of dependants	Applicant	
	Income-tested threshold of full benefit	Income-tested threshold of partial benefit
0	490 000	1 920 000
1	870 000	2 300 000
2	1 250 000	2 680 000
3	1 630 000	3 060 000
4	2 010 000	3 440 000
5	2 390 000	3 820 000

The amount of partial benefit is calculated as follows:

For families with one child:

- Benefit amount =  $44\,140 - \{(\text{Amount of income} - \text{"Income-tested threshold of full benefit"}) \times 0.0235804 + 10\}$

The additional amount for the second child is calculated as follows:

- Benefit amount =  $10\,420 - \{(\text{Amount of income} - \text{"Income-tested threshold of full benefit"}) \times 0.0036364 + 10\}$

And the additional amount for the third and subsequent children as follows:

- Benefit amount =  $6\,250 - \{(\text{Amount of income} - \text{"Income-tested threshold of full benefit"}) \times 0.0021748 + 10\}$

## Main changes in the Tax/benefit Systems since 1998

As part of the Fiscal Year 1999 tax reform, the highest marginal rate of the personal income tax imposed by the central government was reduced from 50% to 37%. The top rate of the local inhabitant's tax was reduced from 15% to 13%. A proportional tax reduction was granted with respect to the national income tax and the local inhabitant's tax. The amount is equal to the lesser of 20% (local inhabitant's tax: 15%) of the amount of tax before reduction or JPY 250 000 (local inhabitant's tax: JPY 40 000).

As part of the FY 2005 tax reform, the rate of proportional tax reduction was reduced from 20% to 10% (local inhabitant's tax: from 15% to 7.5%) and the ceiling was reduced from JPY 250 000 to JPY 125 000 (local inhabitant's tax from JPY 40 000 to JPY 20 000) as from 2006 (local inhabitant's tax: FY 2006). In the FY 2006 tax reform, the proportional tax reduction was abolished as from 2007 (local inhabitant's tax: FY 2007).

As part of the FY 2006 tax reform, the progressive rate structure of national income tax was reformed into a 6 brackets structure with tax rates ranging from 5% to 40%, and the rate of local inhabitant's tax became proportional at a single rate of 10%.

As part of the FY 2012 tax reform, the upper limit on employment income deduction (JPY 2 450 000) was set for those who earn employment income of more than JPY 15 000 000 as from 2013 (personal inhabitant's tax: FY 2014).

As part of the FY 2013 tax reform, the tax rate of 45% was set for the income beyond JPY 40 000 000 from 2015 creating a 7 brackets structure.

As part of the FY 2014 tax reform, the upper limit on employment income deduction was determined to be gradually reduced. In 2016 (as for personal inhabitant's taxes, in FY2017), the limit became JPY 2 300 000 for salary income more than JPY 12 000 000. Moreover, in 2017 (as for personal inhabitant's taxes, in FY2018), the limit became JPY 2 200 000 for salary income more than JPY 10 000 000.

As part of the FY 2017 tax reform, as regards allowance for spouse and special allowance for spouse, the maximum spousal income qualifying for the tax allowance (maximum JPY 380 000) were raised from JPY 380 000 to JPY 850 000. At the same time, an upper income limit was introduced as a requirement for taxpayers to qualify for allowance for spouse and special allowance for spouse. The reform went into effect in 2018. (As for personal inhabitant's taxes, allowance for spouse and special allowance for spouse were revised similarly. This reform went into effect in FY2019.)

As part of the FY 2018 tax reform, following tax systems were revised. The reform went into effect in 2020 (as for personal inhabitant's taxes, in FY2021):

- The amount of employment income deduction and pension income deduction was reduced uniformly by JPY 100 000 while the amount of personal deduction was raised uniformly by JPY 100 000.
- The amount of employment income deduction from income exceeding JPY 8 500 000 was reduced to JPY 1 950 000. However, in consideration of child care and long-term care, measures were taken to avoid increase in burden on households with a dependent relative(s) under 23 years of age and households with a member(s) dependent on care (\*).

\* Relatives receiving "special deduction for persons with disabilities."

- A cap of JPY 1 955 000 was put on pension income deduction for pension income exceeding JPY 10 000 000. The deduction was reduced for pensioners with income other than pension exceeding JPY 10 000 000 after deductions.
- Personal deduction was diminished for people with total income exceeding JPY 24 000 000 after deductions, and the amount was further reduced gradually to zero when total income exceeds JPY 25 000 000.

Eligible age for cash benefits for dependent children was raised from three to six as from 1 June 2000, from six to nine as from 1 April 2004 and from nine to twelve as from 1 April 2006. Benefit amount has been doubled to JPY 10 000 for the first and second child under the age of three as from 1 April 2007.

As from 2010, JPY 13 000 per month is paid to parents/guardians regardless of their income for each child until he/she graduates from junior high school.

As from April 2012 (Income threshold of JPY 6 220 000 is applied beginning from June 2012 payments):

- a) For persons earning incomes below JPY 6 220 000 per year
  - JPY 15 000 (per month) is paid to parents/guardians for each child who is under 3 years old or for the third or subsequent child from 3 years old until he/she graduates from elementary school.
  - JPY 10 000 (per month) is paid to parents/guardians for each child who is for the first or second child from 3 years old until he/she graduates from elementary school or who is a junior high school student.
- b) For persons earning incomes not less than JPY 6 220 000 per year
  - JPY 5 000 (per month) is paid to parents/guardians for each child until he/she graduates from junior high school as the Special Interim Allowances.

As from June 2022, those who with incomes of JPY 8 580 000 or more per year are not eligible for the Special Interim Allowances.

## Memorandum Item

### ***Average gross annual wage earnings calculation***

The source of calculation is the Basic Survey on Wage Structure, published by the Ministry of Health, Labour and Welfare. This survey covers establishments with ten or more regular employees over the whole country and contains statistical figures for monthly contractual cash earnings in June and annual special cash earnings (such as bonuses) received by various categories of workers. Male and female workers in manufacturing, mining and quarrying, construction, wholesale and retail trade, transportation and storage, accommodation and food service activities, information and communication, financial and insurance activities, real estate activities, and professional, scientific and technical activities are surveyed in the statistics. Their gross annual earnings are calculated by multiplying monthly contractual cash earnings by 12 and adding any annual special cash earnings. In the Basic Survey, various allowances such as overtime, sickness and leave allowances are included in cash earnings. The survey covers the whole country, and no special assumption is made regarding the place of residence of the workers surveyed. The calculation method has been changed to adjust weights taking into account the response rate since 2020.

### ***Employer contributions to private pension and health schemes***

DB: JPY 2 572 billion (FY 2021)

Employees' Pension Funds (EPFs): JPY 74 billion (FY 2022)

DC: JPY 1 331 billion (FY2022)

Data of DB and EPFs are the total amount of employers' contribution and employees' one and there is no data of those which indicates only employers' contribution. Under DC schemes, as from January 2012, matching contribution which enables employee to pay additional contribution to employer's one became available. The amount of DC does not include the amount of matching contribution. It is regulated by law that employers' contribution must be higher than employees' one.

## 2024 Tax equations

The equations for the Japanese system are mostly on an individual basis. But the tax allowances for the spouse and for children are relevant only to the calculation for the principal earner. This is shown by the Range indicator in the table below.

The functions which are used in the equations (Taper, MIN, Tax etc) are described in the technical note about tax equations. Variable names are defined in the table of parameters above, within the equations table, or are the standard variables “married” and “children”. A reference to a variable with the affix “\_total” indicates the sum of the relevant variable values for the principal and spouse. And the affixes “\_princ” and “\_spouse” indicate the value for the principal and spouse, respectively. Equations for a single person are as shown for the principal, with “\_spouse” values taken as 0.

	Line in country table and intermediate steps	Variable name	Range	Equation
1.	Earnings	earn		
2.	Allowances:			
		tax_al	P	IF(earn_princ<basic_al_lim1,basic_al*basic_al_rate1,IF(earn_princ<basic_al_lim2,basic_al*basic_al_rate2,IF(earn_princ<basic_al_lim3,basic_al*basic_al_rate3,basic_al*basic_al_rate4)))+ROUNDUP(Married*(earn_spouse-MIN(emp_inc_max,MAX(emp_inc_min,Tax(earn_spouse,emp_inc_sch)))<=spouse_al_cell)*spouse_al*VLOOKUP(positive(earn_princ-MIN(emp_inc_max,MAX(emp_inc_min,Tax(earn_princ,emp_inc_sch))))),taxpayer_lim,2,TRUE,-4))+ROUNDUP(Married*VLOOKUP(Positive(earn_spouse-MIN(emp_inc_max,MAX(emp_inc_min,Tax(earn_spouse,emp_inc_sch))))),spouse_al_sp,2,TRUE)*VLOOKUP(positive(earn_princ-MIN(emp_inc_max,MAX(emp_inc_min,Tax(earn_princ,emp_inc_sch))))),taxpayer_lim,2,TRUE,-4)+Children*child_al+MAX((earn_princ*VLOOKUP(earn_princ,emp_inc_sch,2,TRUE)+VLOOKUP(earn_princ,emp_inc_sch,3,TRUE)),emp_inc_min)+SSC_princ

13.	Employer's social security	SSC_empr	B	$\text{SSC\_pens} * \text{MIN}(\text{earn}, \text{pens\_ceil}) + \text{SSC\_sick} * \text{MIN}(\text{earn}, \text{sick\_ceil}) + (\text{SSC\_empr\_unemp} + \text{SSC\_empr\_oth}) * \text{earn}$

Key to range of equation B calculated separately for both principal earner and spouse P calculated for principal only (value taken as 0 for spouse calculation).

## Note

<sup>1</sup> Persons receiving “special deduction for persons with disabilities”.

# Korea

---

This chapter includes data on the income taxes paid by workers, their social security contributions, the family benefits they receive in the form of cash transfers as well as the social security contributions and payroll taxes paid by their employers. Results reported include the marginal and average tax burden for eight different family types.

Methodological information is available for personal income tax systems, compulsory social security contributions to schemes operated within the government sector, universal cash transfers as well as recent changes in the tax/benefit system. The methodology also includes the parameter values and tax equations underlying the data.

The national currency is the Won (KRW). In 2024, KRW 1 362.66 were equal to USD 1. In that year, the average worker was expected to earn KRW 55 002 302 (Secretariat estimate).

## Personal Income Tax System

### Central government income tax system

#### Tax unit

Each individual is taxed on his/her own income.

Non-taxable wage income includes the:

- National pension, National health insurance, Employment insurance and Workers' compensation insurance that are borne by employer.
- Overtime payment to productive workers: up to KRW 2 400 000 of overwork payment of productive workers in manufacturing and mining sectors whose monthly wage is less than KRW 2 100 000 and whose yearly wage is less than KRW 30 000 000.

#### Allowances and tax credits

##### Standard reliefs

- Employment income deduction: the following deduction (up to KRW 20 000 000) from gross income is provided to wage and salary income earners:

Salary	Deduction
Up to KRW 5 000 000	70%
KRW 5 000 000 to KRW 15 000 000	KRW 3 500 000 plus 40% of the salary over KRW 5 000 000
KRW 15 000 000 to KRW 45 000 000	KRW 7 500 000 plus 15% of the salary over KRW 15 000 000
KRW 45 000 000 to KRW 100 000 000	KRW 12 000 000 plus 5% of the salary over KRW 45 000 000
Over KRW 100 000 000	KRW 14 750 000 plus 2% of the salary over KRW 100 000 000

- Basic allowance: a taxpayer can deduct KRW 1 500 000 from his/her income for each person who meets one of following conditions:
  - the taxpayer him/herself.
  - the taxpayer's spouse whose taxable income (gross earnings net of employment income deduction) is less than KRW 1 000 000 (Spouse only have a salary earned income is less than KRW 5 000 000).
  - the taxpayer's (including the spouse's) dependents (parents, siblings, children) within the same household whose income after accounting for the employment income deduction is less than KRW 1 000 000 (Dependent only have a salary earned income is less than KRW 5 000 000) and whose age is:
    1. parents: 60 years or older.
    2. brother/sister: 60 years or older or 20 years or younger.
    3. children: 20 years or younger (if both partners in the household earn wage-income, this Report assumes that the principal wage earner will claim the allowance).
- Additional allowance: a taxpayer can deduct KRW 1 000 000 (500 000 in the case of (c), KRW 2 000 000 in the case of (b)) from his/her gross income when the taxpayer or his/her dependents fall into one of the following categories (for this report, only cases (c) and (f) are modelled):

- a person aged 70 years or older(a)
  - a handicapped person (b)
  - a female wage earner who is the head of a household with dependents (but without spouse) or a female wage earner with spouse when her taxable income is not more than KRW 30 million (c)
  - a single parent with descendants including adoptees\*(f)
  - \* Overlapping of deductions for (c) and (f) is not allowed. So a taxpayer should select only one.
- National pension deduction: employees can deduct 100% of their National Pension contributions.
  - Insurance premiums: the National health insurance premium and the Employment insurance premium can be entirely (100%) deducted from taxable income.
  - Working Tax credit: wage and salary income earners obtain the following tax credit:

Calculated tax	Amount of tax credit
Up to KRW 1 300 000	55% of calculated tax
Over KRW 1 300 000	KRW 715 000 plus 30% of the calculated tax over KRW 1 300 000

Total wage and salary income	Ceiling on credit amount
Not more than KRW 33 million	KRW 740 000
Not more than KRW 70 million	The greater of KRW 660 000 and KRW 740 000- [(total wage and salary income -KRW 33 million)* 0.8%]
Not more than KRW 120 million	The greater of KRW 500 000 and KRW 660 000- [(total wage and salary income- KRW 70 million)* 50%]
Exceeding KRW 120 million	The greater of KRW 200 000 and KRW 500 000- [(total wage and salary income- KRW 120 million)* 50%]

### Main non-standard tax reliefs

Wage and salary income earners may deduct from gross income the expenses for the following items during the tax year:

- Saving/Payment for housing: 40% of deposits of an account for purchasing a house, which is held by a person who does not own a house, and 40% of repayments of loans including interest borrowed in order to lease a house smaller than 85 square meters in size by a person owning no house may be deducted up to four million won per year.
- Credit card purchases: Employees may deduct 15% of their credit card (30% of their debit card, prepaid card or cash receipt) purchases that exceed 25% of their total income up to the lesser of KRW 3 000 000 or 20% (up to the lesser of KRW 2 500 000 in the case of the total income from over KRW 70 000 000) However, for expenditures spent for traditional markets and public transportation, the allowed deduction is equivalent to 40% of the expenditure (30% for the expenditures of books, performances, theatres, and museums only if their total income is less than KRW 70,000,000) and the ceiling is raised by an additional KRW 2,000,000 (KRW 3,000,000 if their total income is less than KRW 70,000,000).

### Child tax credit

- Where a resident with taxable income has dependent children from 8 years old including adoptee, he/she gets annual tax credit of KRW 150 000 for having a child, KRW 350 000 for having two

children and KRW 300 000 plus KRW 300 000 per an excess child over two children in case of having more than three children.

- Resident gets tax credit of KRW 300 000 for the first child, KRW 500 000 for the second Child, and KRW 700 000 for the third child or more for birth and adoption of the year.
- Refundable CTC (child tax credit)

Refundable CTC can be received in families with children under the age of 18, regardless of the existence of a spouse. From 2024, the income standard for Refundable CTC has been Raised from 40,000,000 won to 70,000,000 won. It must meet the requirements (less than 70,000,000 won in income per household and less than 240,000,000 won in property per household) and be paid according to the calculation table for each child.

Household Gross Earnings		Child care subsidies	
More than Gross Earnings	Less than Gross Earnings	Single-income Households	Dual-income Households
40,000	6,000,000	1,000,000	-
6,000,000	21,000,000	1,000,000	1,000,000
21,000,000	21,500,000	1,000,000	1,000,000
21,500,000	22,000,000	995,000	1,000,000
~			
69,000,000	69,500,000	511,000	512,000
69,500,000	69,999,990	506,000	506,000

### Credit for Pension Insurance Premiums

- A resident who paid pension contributions to a pension account may deduct the amount equal to 12% of the premiums paid from his/her global income tax amount, only up to KRW 6 million for pension savings account as well as KRW 9 million for sum of the pension savings account and retirement pension account.
- A resident whose labour income is not exceeding KRW 55 million when he has labour income only or whose global income is not exceeding KRW 45 million would deduct 15% of the premium.

### Special tax credit

Wage and salary income earners may obtain following tax credit during the tax year:

- Insurance premiums (a): 12% of the general insurance premium up to KRW 1 000 000 can be deducted from his/her income tax amount.
- Medical expenses (b): 15% of the medical expenses exceeding 3% of taxable income can be deducted from his/her income tax amount. The medical expenses for taxpayer's dependents who are eligible for the basic deduction are limited to KRW 7 000 000 and the medical expenses for the taxpayer himself, taxpayer's dependents who are aged 65 years or older and handicapped persons are not limited.
  - In addition, 30% of medical expenses for the treatment of infertility can be deducted from his/her income tax amount. There is no deduction limitation.
  - In addition, 20% of medical expenses for the treatment of premature baby and congenital abnormality can be deducted from his/her income tax amount. There is no deduction limitation.
- Educational expenses (c): 15% of tuition fees for pre-school, elementary, middle school, and college (but the graduate school fee deduction is allowed only for the taxpayer himself), either for the taxpayer himself or his/her dependents (including the taxpayer's spouse, children, and

siblings), can be deducted from his/her income tax amount. The tuition fee for the taxpayer himself is not limited. For the taxpayer's dependents, the limits of tuition fees are as follows:

- For pre-school: up to KRW 3 000 000 per child.
  - For elementary, middle and high school: up to KRW 3 000 000 per student.
  - For college/university: up to KRW 9 000 000 per student.
- Charities (d): 15% of the amount of donation (in case of the donation exceeding KRW 10 000 000, 30% of the excess amount over KRW 10 million) is deducted from income tax amount. The limits of donations are as follows:
    - donations to a government body, donations for national defence, natural disaster, and certain charitable associations: up to gross income.
    - donations to public welfare or religious associations: up to 30% of gross income.
  - Standard Credits: Alternatively, a taxpayer may choose an annual standard credit of KRW 70 000 (KRW 130 000 for wage and salary earners and KRW 120 000 for business owners meeting certain requirements), if he or she fails to claim deductions for insurance premium, saving/payment for housing and special tax credit.

## Tax schedule

Over (KRW)	Not more than (KRW)	Marginal tax rate (%)
0	14 000 000	6
14 000 000	50 000 000	15
50 000 000	88 000 000	24

500 000 000	1 000 000 000	42
1 000 000 000		45

## Local income tax

### *Tax base*

The local income tax base is the income tax paid to the central government.

### *Tax rate*

A uniform rate of 10% is applied. However, the local government can adjust the rate between the lower limit of 5% and the upper limit of 15%.

### *Tax rate (selected for this study)*

A country-wide rate of 10% is used in this Report.

## Compulsory Social Security Contribution to Schemes Operated Within the Government Sector

### **Employees' contribution**

#### *National pension*

The National pension contribution rate is 4.5% of the standardised average monthly wage income as of 2020.

The scope of the standardised average monthly wage income is from KRW 390 000 to KRW 6 170 000 as of 1 July 2024.

If the average monthly wage income of a person is less than KRW 390 000, the average monthly wage income of the person is regarded as KRW 390 000 and the rate (0.045) is applied. If the average monthly wage income of a person is more than KRW 6 170 000, the average monthly wage income of the person is regarded as KRW 6 170 000 and the rate (0.045) is applied; so the minimum of the national pension contribution per year is KRW 210 600 ( $\text{KRW } 390\,000 \times 0.045 \times 12 \text{ months}$ ), and the maximum of the national pension contribution per year is KRW 3 331 800 ( $=\text{KRW } 6\,170\,000 \times 0.045 \times 12 \text{ months}$ ).

#### *National health insurance*

The National health insurance premium, which has a rate of 4.004078 % (National health insurance: 3.545 %, Long term care insurance 12.95 % of National Health insurance premium rate), is levied on average monthly wage income as of 1 January 2024.

The scope of the monthly National health insurance premium (excluding long term care insurance premium) is from KRW 9 890 to KRW 4 240 710. To include long term care insurance, we should multiply 1.1295. Thus, the scope of the total monthly premium is from KRW 11 157 to 4 789 882. If the calculated premium is less than KRW 11 157, the worker should pay KRW 11 157. Likewise, if the calculated premium is more than KRW 4 789 882, the worker only pays KRW 4 789 882.

#### *Employment insurance*

0.8% of gross income as of 1 October 2019.

0.9% of gross income as of 1 July 2022.

#### *Workers' compensation insurance*

Compulsory application, premiums paid only by employers.

### **Employers' contribution**

#### *National pension*

The national pension contribution rate is 4.5% of the standardised average monthly wage income as of 2020.

The scope of the standardised average monthly wage income is from KRW 390 000 to KRW 6 710 000 as of 1 July, 2024.

If the average monthly wage income of a person is less than KRW 390 000, the average monthly wage income of the person is regarded as KRW 390 000 and the rate (0.045) is applied. If the average monthly wage income of a person is more than KRW 5 900 000, the average monthly wage income of the person

is regarded as KRW 6 710 000 and the rate (0.045) is applied; so the minimum of the national pension contribution per year is KRW 210 600 ( $\text{KRW } 390\,000 \times 0.045 \times 12 \text{ months}$ ), and the maximum of the national pension contribution per year is KRW 3 331 800 ( $=\text{KRW } 6\,170\,000 \times 0.045 \times 12 \text{ months}$ ).

### *National health insurance*

The National health insurance premium, which has a rate of 4.004078 % (National health insurance 3.545 %, Long term care insurance: 12.95 % of National health insurance premium rate), is levied on average monthly wage income as of 1 January 2024.

The scope of the monthly National health insurance premium (excluding long term care insurance premium) is from KRW 9 890 to KRW 4 240 710. To include long term care insurance, we should multiply 1.1295. Thus, the scope of the total monthly premium is from KRW 11 157 to 4 789 882. If the calculated premium is less than KRW 11 157, the employer should pay KRW 11 157. Likewise, if the calculated premium is more than KRW 4 789 882, the employer only pays KRW 4 789 882.

### *Employment insurance*

- the insurance premium is between 1.15% and 1.75% of total wage as of 1 January 2022.
- the insurance premium selected for this study is 1.15%.

### *Workers' compensation insurance*

- the insurance premium consists of an industry-specific rate which is set by the Ministry of Employment and Labor multiplied by total wage;
- the average rate of all industries (announced by the Ministry of Employment and Labor and selected for this study) is 1.47%.

## **Universal Cash Transfers**

- Child Benefit

Child home care allowance is granted KRW 100 000 every month to those who have children aged 24 to 86 months.

If a child attends a nursery or pre-school, monthly childcare service voucher is provided instead of the child home care allowance. The amount of the benefit differs by the age of the child, type of nursery, class of nursery etc.

Starting in 2022, a voucher of KRW 2 000 000 will be given to all newborns.

On top of those two benefits, universal child benefit of KRW 100 000 is paid monthly to those who have children if the child is under the age of 8.

From January 2024, parental benefits will be provided so that infants in need of intensive care can be comfortably taken care of at home. A child who turns 0 receives KRW 1 000 000 per month, and a child who turns 1 receives 500 000 per month. This system will be applied to children born after 2022.

## Main Changes in Tax/Benefit System since 2000

2000	Contribution to National Pension are to be deductible from 2001, upper cap of employment income deduction limit (KRW 12 000 000) is abolished from 2001
2001	Personal income tax rates are lowered by 10% (10, 20, 30, 40% were reduced to 9, 18, 27, 36%, respectively) from 2002
2002	Limits of deduction for education fees are expanded from 2003. For pre-school: from KRW 1 000 000 to KRW 1 500 000. For elementary, middle school and high school: from KRW 1 500 000 to KRW 2 000 000. For college and university: from KRW 3 000 000 to KRW 5 000 000. Limit of deduction for interest of long-term mortgage loan for housing is expanded from KRW 3 000 000 to KRW 6 000 000 from 2003
2003	Employment income deduction and tax credit applicable to low income are increased. The deduction rate for the taxable wage income range of KRW 5 000 000 to KRW 15 000 000 is increased from 45% to 47.5%. The tax credit rate for calculated tax below KRW 500 000 is increased from 45% to 50% and the maximum tax credit is increased from KRW 400 000 to KRW 450 000.
2004	Limits of deduction for education fees are expanded. For pre-school: from KRW 1 500 000 to KRW 2 000 000. For college and university: from KRW 5 000 000 to KRW 7 000 000. Limit of deduction for interest on long-term mortgage loan for housing is expanded from KRW 6 000 000 to KRW 10 000 000. The marginal deduction rate for the taxable wage income range from KRW 5 000 000 to KRW 15 000 000 is increased from 47.5% to 50%. The tax credit rate for tax amounts below KRW 500 000 is increased from 50% to 55% and the maximum permitted tax credit goes up from KRW 450 000 to KRW 500 000.
2005	Personal income tax rates are lowered by 1% point (9, 18, 27, 36% were reduced to 8, 17, 26, 35%, respectively). Lump-sum tax relief are expanded from KRW 600 000 to KRW 1 000 000.
2007	Eligibility for the extra allowance amount has been changed. Previously, an income earner with a small number of dependents (e.g. spouse, child) eligible for basic allowance was eligible for an allowance of up to KRW 1 000 000 depending on the number of dependents. As from 2007, however, an income earner with two or more dependent children eligible for basic allowance is eligible for an allowance equivalent to KRW 500 000 if there are 2 children plus an additional KRW 1 000 000 for every additional child (e.g., 2 children: KRW 500 000; 3 children: KRW 1 500 000; 4 children: KRW 2 500 000, etc.).
2008	Tax schedule has been changed : from KRW 10 000 000, KRW 40 000 000, KRW 80 000 000 to KRW 12 000 000, KRW 46 000 000, KRW 88 000 000. New items have been added to the additional allowance with respect to lineal descendants who are born or adopted during the concerned taxable year. Credit card purchase deduction has been changed : Employees may deduct 20% (previously 15%) of their credit/debit card purchases that exceed 20% (previously 15%) of their total income. Deduction for donations to public welfare or religious associations has been increased up to 15% of gross income. Previously, the limit was 10% of gross income.
2009	Personal income tax rates have been changed: from 8%, 17%, 26%, 35% to 6%, 16%, 25%, and 35%. Employment income deduction has been changed: from 100%, 50%, 15%, and 10% 5% to 80%, 50%, 15%, and 10%. 5%
2010	Personal income tax rates have been changed: from 6%, 16%, 25%, 35% to 6%, 15%, 24%, and 35%.
2012	Personal income tax rates have been changed: from 6%, 15%, 24%, and 35% to 6%, 15%, 24%, 35% and 38%
2013	A new additional allowance is added: a single parent with lineal descendants or adopted children who are eligible for basic exemption can deduct KRW 1 000 000. Insurance premiums, medical expenses, education expenses, loans for house, designated donations, saving deposits for housing subscription, investment in employee stock ownership associations or in associations for investment in start-ups, and credit cards are allowed income deduction with a ceiling at KRW 25 000 000 in total. However, for the amount of designated donations exceeding the ceiling, deduction can be carried forward for 5 years.
2014	Tax schedule has been changed : KRW 300 000 000 to KRW 150 000 000 Personal and special income deductions( e.g. medical expenses, educational expenses) have been shifted toward tax credit Employment income deduction has been changed: 80% to 70%, 50% to 40%. The ceiling amount of earned income tax credit has been changed : KRW 500 000 to KRW 740 000(the salary <33 000 000), KRW 660 000(the salary < 70 000 000)
2015	Refundable CTC(Child Tax Credit) has established
2017	Personal income tax rate 40% is newly created over KRW 500 000 000
2018	Tax schedule has been changed: Tax base over KRW 150 000 000 up to KRW 500 000 000 divided into over KRW 150 000 000 up to KRW 300 000 000 and over KRW 300 000 000 up to KRW 500 000 000 The Highest income tax rate has been changed: 40%→42%
2019	Charities tax credit's deduction rate has been adjusted. Regarding non-taxable overtime payment to productive workers, the upper limit of monthly wage for recipient of tax exemption has been increased to KRW 2 100 000.
2020	Regarding non-taxable overtime payment to productive workers, the upper limit of yearly wage for recipient of tax exemption has

	been increased to KRW 30 000 000. The employment income deduction's limitation of KRW 20 000 000 has been newly set up.
2021	Tax schedule has been changed: tax base over KRW 500 000 000 is divided into over KRW 500 000 000 to KRW 1 000 000 000 and over KRW 1 000 000 000. Tax rate to be applied is 42% and 45% respectively.
2022	Special tax credit rate of medical expenses for the treatment of infertility has been changed: 20%→30% Special tax credit of medical expenses for the treatment of premature baby and congenital abnormality has been newly set up.(20%)
2023	Tax schedule has been changed: KRW 12 000 000 to KRW 14 000 000 and KRW 46 000 000 to 50 000 000. The ceiling amount range of working tax credit has been changed: over KRW 70 000 000 is divided into over 70 000 000 to 120 000 000 and over 120 000 000. Ceiling on credit amount to be applied is 500 000 and 200 000 respectively.
2024	Limit of deduction for interest on long-term mortgage loan for housing is expanded from KRW 6 000 000 to KRW 20 000 000. Salaries received by workers with children under the age of 6 from employers in relation to childbirth and childcare are not taxed up to 200,000 per month. From 2024, The income standard for Refundable CTC has been Raised from 40,000,000 won to 70,000,000 won.

## Memorandum Item

### *Identification of the Average Worker (AW)*

- Sectors used: industry Sectors B-N with reference to the International Standard Industrial Classification of All Economic Activities, Revision 4 (ISIC Rev.4).

Geographical coverage: whole country.

Type of workers: wage workers (male and female).

### *Method to calculate wages*

Establishment Labor Force Survey (ELFS) by the Ministry of Employment and Labor is used to calculate the AW. The statistics were obtained through a sample survey of approximately 13 000 firms with one or more permanent employees throughout the whole country.

Basic method of calculation used: average monthly wages multiplied by 12.

### *Employer's reserve for employee's retirement payment*

An employer should pay to a retiree the retirement payment which is not less than 30 days' wage and salary per one year of service (about 8.3% of gross income or more). An employer can contribute to the Retirement Payment Reserve Fund established within the company or Retirement Insurance Fund established outside the company to prepare for the retirement payment. Such contribution is treated as business expense under certain constraints. Because contribution to the Retirement Fund is not compulsory, this survey does not include such contribution except the contribution converted to employer's contribution to the national pension plan (see the National pension Section).

## 2024 Tax equations

The equations for the Korean system are independent between spouses except that the principal earner has tax allowances for the spouse and for any children.

The functions which are used in the equations (Taper, MIN, Tax etc) are described in the technical note about tax equations. Variable names are defined in the table of parameters above, within the equations table, or are the standard variables married and children. A reference to a variable with the affix total indicates the sum of the relevant variable values for the principal and spouse. And the affixes “\_princ” and “\_spouse” indicate the value for the principal and spouse, respectively. Equations for a single person are as shown for the principal, with spouse values taken as 0.

	Line in country table and intermediate steps	Variable name	Range	Equation
1.	Earnings	earn		
2.	Allowances:			
	employment income	emp_al	B	MIN(Empincded(earn, empincdedsch),max_empded)
	basic	bas_al	B	bas_al
	spouse	sp_al	P	Married*spouse_al*(earn_spouse-emp_al_spouse<=spouse_al_lim)
	dependents	dp_al	P	Children*dep_al
	additional allowances	add_al_princ	P	IF(AND(Married='0,Children>0),' add2_all,0)
	additional allowances	add_al_spouse	S	IF(AND(earn_spouse>0,earn_spouse<=add_all_lim),add_all,0)
	national pension deduction	np_de	B	Min(earn*SSC_pens, SSC_pens_max)
	Main non-standard tax relief	non-std_al	B	IF(earn*(SSC_sick+SSC_unemp)>lump_thresh,earn*(SSC_sick+SSC_unemp),0)
	Total	tax_al	B	emp_al+bas_al+sp_al+dp_al+add_al+np_al
3.	Credits in taxable income	taxbl_cr	B	0
4.	CG taxable income	tax_inc	B	Positive(earn-tax_al)
5.	CG tax before credits	CG_tax_excl	B	Tax(tax_inc, tax_sch)
6.	Tax credits :			
	earned income special tax credit	earn_cr	B	MIN(earntaxcred(CG_tax_excl), credlimit(earn))

	Refundable CTC	lump_cr	B	IF(non-std_al='0,' lump_cred, 0)
	lump-sum tax credit	tax_cr	B	earn_cr+child_cr+lump_cr
	Total	refund_child_cred	J	IF(Gross earnings<ctc_earn_thr_max,(VLOOKUP(FLOOR(Gross earnings,ctc_earn_thr_min),ctc_schedule,3)*Children-tax_cr),0)
7.	CG tax	CG_tax	B	CG_tax_excl-tax_cr
8.	State and local taxes	local_tax	B	local_rate*CG_tax
9.	Employees' soc security	SSC	B	MAX(SSC_pens_min,MIN(earn*(SSC_pens),SSC_pens_max))+MAX(SSC_sick_min,MIN(earn*(SSC_sick),SSC_sick_max))+earn*(SSC_unemp)
11.	Cash transfers	cash_trans	J	=cash_child*child_und7_max*(Children>0)
13.	Employer's soc security	SSC_empr	B	MAX(SSC_pens_min,MIN(earn*(SSC_pens),SSC_pens_max))+MAX(SSC_sick_min,MIN(earn*(emp_sick),SSC_sick_max))+earn*(emp_unemp+emp_inj)

Key to range of equation:

B calculated separately for both principal earner and spouse

P calculated for principal only (value taken as 0 for spouse calculation)

S calculated for spouse only

J calculated once only on a joint basis

# Latvia

---

This chapter includes data on the income taxes paid by workers, their social security contributions, the family benefits they receive in the form of cash transfers as well as the social security contributions and payroll taxes paid by their employers. Results reported include the marginal and average tax burden for eight different family types.

Methodological information is available for personal income tax systems, compulsory social security contributions to schemes operated within the government sector, universal cash transfers as well as recent changes in the tax/benefit system. The methodology also includes the parameter values and tax equations underlying the data.

Since 2014, the Latvian currency is the Euro (EUR). In 2024, EUR 0.92 was equal to USD 1. That year, the average worker in Latvia earned EUR 20 176 annually (Secretariat estimate).

## Personal income tax system

From 1st January 2018, Latvia introduced an ambitious tax reform. One of the main goals of this reform was to reach Latvian government as well as international expert's expectations – to reduce the tax wedge, especially for low-wage earners.

### Central government income tax

In 2018 with the labour tax reform the progressive income tax system was introduced for the first time, as well as the differentiated non-taxable minimum, the allowance for dependents and the non-taxable minimum for pensioners was increased, and the minimum monthly wage was raised.

#### *Tax unit*

The tax unit are individuals.

#### *The main tax allowance.*

#### Standard tax reliefs

- A general (basic) allowance:

Since 2016, the differentiated non-taxable minimum is introduced.

The differentiated non-taxable minimum varies depending on the person's income level: higher for lower wages, but lower or zero for higher wages. The differentiated non-taxable minimum is gradually raised.

In 2020 and 2021 the differentiated non-taxable minimum varies from EUR 0 to 300 per month, but from 1<sup>st</sup> January 2022 - from EUR 0 to 350 per month and from 1<sup>st</sup> July 2022 from EUR 0 to EUR 500 per month (see table below).

### Differentiated non-taxable minimum criteria's:

	2020	2021	2022	2023	2024
Maximum non-taxable minimum, <i>EUR per month</i>	300	300	350   500 <sup>1</sup>	500	500
Minimum non-taxable minimum, <i>EUR per month</i>	0	0	0	0	0
Taxable income* minimum threshold up to which the maximum annual non-taxable minimum is applied, <i>EUR per month</i>	500	500	500	500	500
Taxable income* maximum threshold up to which the annual non-taxable minimum is applied, <i>EUR per month</i>	1 200	1 800	1 800	1800	1800

\* Calculating the taxable income not only the salary is taken into account, but also other income (such as dividends and income from real estate etc.). Similarly, if a person works in several jobs, the salaries are summed up and the non-taxable minimum is applied to the total revenue.

In 2024, the maximum tax allowance amount is EUR 500 per month, and it is applied to the taxable income below EUR 500 per month. If the taxable income is between EUR 500 per month and EUR 1 800 per month, the differentiated annual non-taxable minimum is calculated according to a specific formula. The allowance gradually decreases until it reaches zero and above income EUR 1800 per month is not applied. It is important to note that from 2018, the differentiated non-taxable minimum in full amount is applied already during the tax year. It is based on the State Revenue Service (SRS) forecast which takes into account the taxpayer's annual income of the previous year. In 2017 the non-taxable minimum was applied only in the minimum amount for all taxpayers (EUR 60) and only in the next taxation year, when the taxpayer submitted the annual tax return, it was applied based on the annual taxable income data of a person.

- The allowance for dependents

The allowance for dependents is also deductible from the income before taxes.

The tax allowance for each dependant (which in most cases are children) was gradually raised - in 2018 from EUR 175 to EUR 200 per month or EUR 2 400 per year, in 2019 to EUR 230 per month or EUR 2 760 per year and in 2020 to EUR 250 per month or EUR 3 000 per year. In 2021 - 2024 this allowance remained in the same amount as in 2020.

- The taxpayer can apply the allowance for a child aged 18 years and younger and for a child while he or she continues the acquisition of the general, professional, higher or special education, but not longer than until reaching 24 years of age. The allowance for dependents is applicable for a taxpayer's child and in certain cases and under certain conditions for sisters, brothers, grandchildren, spouses, parents and grandparents with disability as well as persons under guardianship.

As of 2016, the rule of law narrowed, removing allowances for unemployed spouse, parents or grandparents, except if these persons are with disabilities.

From 2017, the tax allowance for dependents was expanded by non-working spouse, who is taking care of a minor child with a disability if the non-working spouse does not receive taxable income or State pension.

In addition, as of July 1, 2018, the allowance is applicable for unemployed spouse who is taking care of:

- one child below 3 years of age.
- three or more children below 18 years or below 24 years of age (if he/she studies), of which at least one is below 7 years of age.
- five children below 18 years of age or below 24 years of age (if he/she studies).

To support youth employment during the summer (from June 1st to August 31st), parents can still receive tax allowance for dependents (children while they are employed).

Relief for compulsory social security contributions: Employee's state social security contributions are deductible from the income before taxes.

Tax credits: none for employees.

### **The main exemptions:**

- income from rural tourism and agricultural production, as well as of mushrooming, berry-picking or the collection of wild medicinal plants and flowers or an uncultivated species or individuals of non-game species - edible snails (*Helix pomatia*), if it does not exceed EUR 3 000 per taxation year, including the sums of State aid for agriculture or of the European Union aid for agriculture and rural development, in amount of EUR 3 000 per taxation year.

- insurance compensations, except such insurance compensations paid on the basis of a life, health and accident insurance contract entered into by the employer and a life-long pension insurance contract (with accrued funded pension assets in accordance with the Law on State Funded Pensions).
- insurance compensations which have been disbursed upon the occurrence of an insurable event in relation to the life and health of the insured person due to an accident or illness, in accordance with the life insurance policy (including with accumulation of funds) regardless of who has entered into the insurance contract.
- the supplementary pension capital, which has been formed from contributions of private individuals or their spouse or a person related to their relatives up to the third stage within the meaning of the Civil Law into private pension funds according to licensed pension plans and disbursed to pension plan participants.
- income from Latvian or other EU Member State or EEA State and local government bonds.
- capital gains on immovable property, if the ownership of the payer has been for more than 60 months (5 years) and it has been the declared as place of residence of the person for at least 12 months (1 year).
- capital gains on immovable property, if the ownership of the payer has been for more than 60 months (5 years) and the last 60 months (5 years) this immovable property has been the only real estate of the payer.
- capital gains on immovable property which has occurred in relation to the division of property in the case of dissolution of marriage, if it has been the declared place of residence of both spouses at least 12 months until the day of entering into the alienation contract.
- capital gains on immovable property (the relevant immovable property is registered in the Land Register as only immovable property of the payer), if this income is invested a new in a functionally similar immovable property within 12 months following the alienation of the immovable property or before alienation of the immovable property.
- income from the alienation of personal property (movable objects such as furniture, clothing and other movable objects belonging to an individual intended for personal use) except income from the sale of items (tangible or intangible) prepared for sale or purchased, the capital gains and other income from capital and scrap sales.
- scholarships paid from the budget, association, or foundation resources.
- scholarships up to 280 euros per month paid by an entrepreneur in accordance with the procedure set out by the Cabinet of Ministers for the organization and implementation of work environment training shall be paid by the merchant, institution, association, foundation, natural person registered as a performer of economic activity, as well as individual enterprise, including farmer or fishermen's farm, and other economic operators.
- grants paid to a student who attends a medical education program to promote the acquisition of an educational program, and which is paid out from the institution of health care institution.
- income obtained as a result of inheritance except author's fees (royalty) which is paid to the inheritors of the copyright and for the State funded pension capital which is inherited in case of the death of a participant of a State funded pension scheme.
- allowance (alimony).
- prizes of lotteries and gambling if the amount (total amount) of the prize (value thereof) does not exceed EUR 3 000 per taxation year.
- goods and services lottery prizes.
- material and monetary prizes (premiums) received at competitions and contests, the total value of which in the taxation year does not exceed EUR 143, and the prizes and premiums acquired at

international contests the total value of which does not exceed EUR 1 423 a year, as well as the financial incentive paid out to the laureates of the prizes of the Baltic Assembly, prizes of the Cabinet and cash prizes of the Cabinet for outstanding achievements in sport.

- revenues from gifts up to EUR 1 425 from natural person, other than a close relative.
- revenues from gifts in full amount from natural persons, if the giver is connected to the payer by marriage or kinship to the third degree.
- dividends, income equal to dividends or notional dividends if the enterprise income tax has been paid etc.
- assistance provided on the basis of a decision of a trade union institution from the funds of the trade union which are formed from the payments of membership fees and donations (gifts) of foreign trade unions - EUR 3 000 a year;
- assistance in the form of money or other things, or services provided from a religious organisation or monies of an institution thereof on the basis of a decision of the religious organisation or a body of the institutions thereof (officials) - EUR 3 000 per year;
- tuition fees paid by an employer for an employee's studies for higher education if the higher education involves the acquisition of skills which are required by the employer;
- employer-paid employee expenses related to remote working if their total amount per month for full-time work does not exceed EUR 40.

### *Tax schedule*

From 2018, the personal income tax (PIT) system is progressive (in 2017 the PIT rate was a flat tax rate of 23%).

In 2024, the PIT rates are set:

- 20% - for income up to EUR 20 004 per year.
- 23% - for income exceeding EUR 20 004 but not exceeding EUR 78 100 per year (in 2021 not exceeding EUR 62 800 per year).
- 31% - for income exceeding EUR 78 100 per year (in 2021 exceeding EUR 62 800 per year).

The tax rate 20% and 23% (depending on the level of income) is applicable monthly in the workplace where a payroll tax book is submitted. In the workplace where a payroll tax book is not submitted, only the 23% rate should be applied.

The rate 31% is calculated only in the annual tax return. During the year, the tax is paid as Solidarity tax for an employee whose revenue exceeds EUR 78 100 per year. The Solidarity tax part of 10.0% is transformed into the personal income tax rate of 31%. The compulsory social security contributions from income above EUR 78 100 per year shall not be paid.

### ***Regional and local income tax***

There are no regional and local income taxes.

### **Compulsory social security contributions to schemes operated within the government sector.**

In 2018, the compulsory social security contribution rate was increased by one percentage point from 34.09% to 35.09% to ensure financing of the health sector (0.5% paid by the employee and 0.5% paid by the employer). From 2021 the social security contribution rate has been reduced by 1 percentage point to

the same rate level as it was in force before 2018, i.e. from 35.09% to 34.09% (for employers from 24.09% to 23.59%, for employees from 11% to 10.5%)

The social security contributions cover:

- state pension insurance.
- social insurance in case of unemployment.
- social insurance in respect of accidents at work and occupational diseases.
- disability insurance.
- maternity and sickness insurance.
- parental insurance.
- health insurance.

In 2024, the maximum object of mandatory social payments is EUR 78 100 per year.

### ***Employees' contributions***

Employees pay 10.5% of their earnings in social security contributions. The taxable base is the total amount of the gross wage or salary including vacation payments, fringe benefits and remuneration of expenses related to work above a certain threshold. The assessment period is the calendar month.

### ***Employers' contributions***

Social security contributions are also paid by employers at a rate of 23.59% on behalf of their employees. The taxable base and the assessment period are the same as for employees' contributions.

The total contribution rates paid by employees and employers in 2024 are divided:

Scheme name	Rate of contribution (%)
Pension insurance	23.91
Unemployment insurance	1.6
Insurance of accidents at work and occupational diseases	0.66
Disability insurance	2.29
Maternity and sickness insurance	3.47
Parental insurance	1.16
Health insurance	1.00
Total	34.09

### ***Solidarity tax***

From 2016 the Solidarity tax was introduced.

From 2019 the Solidarity tax rate has been reduced from 35.09% (2018) to 25.50%, and from 2021 to 25%. See more in the table below on the distribution of Solidarity tax rate from 2017 to 2021.

The difference between 2018 and onwards is that:

- in 2018 the Solidarity tax rate is set at the same level as the current social security contributions rates (11% and 24.09%). Solidarity tax is applied during the tax year to the same rate as the social security contributions.
- in 2019 and 2020 Solidarity tax was set at 25.5%, which was less than the current social security contributions rate of 35.09% (11% and 24.09%). In 2021 the Solidarity tax was reduced to 25%. The Solidarity tax is applied during the tax year at the same rate as the social security contributions (34.09% in 2021 and 2022, 35.09% in 2019 and 2020). Therefore, the overpaid solidarity tax is refunded to the employer in the next taxation year.

The tax is paid for the income exceeding the amount of the maximum social security contribution object. From 2022 the social security contribution ceiling was raised to EUR 78 100 per year (in 2019-2021 was EUR 62 800 per year). The taxation period is the calendar year.

The purpose of the Solidarity tax is to eliminate the existing regressivity in the labour tax system and to equalize the tax burden on labour between low-wage earners and high wage earners. This problem appeared when the social contribution ceiling was re-introduced in 2014.

The Solidarity tax applies to all socially insured individuals – employees, self-employed, if their income during the calendar year exceeds the amount of the maximum compulsory social security contributions. Employers are also subject to the solidarity tax (in the same way, as they are liable for paying employer social security contributions).

### Solidarity tax rate distribution

	2018	2019-2020	2021-2024
Solidarity tax rate	35.09%	25.50%	25.00%
Employer's rate distribution:	24.09%	14.50%	14.50%
State budget (not tied to social services)			
Funded pension (2nd pillar pension scheme) *	6.00%		
Private pension in the Fund's Pension Plan (3rd pillar pension scheme) *	4.00%		
State Pension	13.59%		
Pension insurance		14.00%***	14.00%***
Health care	0.50%	0.50%	0.50%
Employee's rate distribution:	11.00%	11.00%	10.50%
State budget (not tied to social services)			
Personal income tax**	10.50%	10.50%	10.00%
Health care	0.50%	0.50%	0.50%

\* If a person is not a member of a funded pension scheme, a private pension fund is transferred 10%.

\*\* The Solidarity tax (paid by employee for income above EUR 78,100 per year in 2022-2024, above EUR 62,800 per year in 2019-2021) part of 10.0% (before 2021 10.5%) is transformed into a Personal income tax rate of 31% (before 2021 31.4%). It means that, by submitting the annual income declaration and performing the conversion of the PIT into three PIT rates (the third rate of 31%), the share of paid Solidarity Tax is equal to PIT rate 31% (before 2021 31.4%).

\*\*\*From 2019 to 2020, 14% of the paid solidarity tax was transferred to the State pension special budget and registered in the personal account of the taxpayer in accordance with the law On State Pensions (in 2018 13.59% were transferred to the State pension special budget). As of 2021, 14% of the paid solidarity tax are transferred to the State pension special budget non-personalised.

### Payroll tax

The Business risk fee is paid in the state basic budget, and then transferred to the Employee claim guarantee fund, which is administrated by the state agency “Insolvency administration”. The Insolvency administration is a public institution controlled by the Ministry of Justice.

If an enterprise is insolvent, the Insolvency Administration satisfies employee claims for their unpaid salaries, compensations for the paid annual leaves and compensations for dismissal in case of the end of the employment relationships.

The Business risk fee does not confer entitlement to any kind of social benefits.

The Business risk fee is a constant payment for a person EUR 0.36 per employee per month.

## Universal cash transfers

### ***Transfers related to marital status***

None.

### ***Transfers for dependent children***

From 2015, support for families has been introduced through differentiated family state benefits:

- EUR 11.38 per month for the first child,
- EUR 22.76 per month for the second child,
- EUR 34.14 per month for the third child,
- EUR 50.07 per month for the fourth and each subsequent child (only from 2017).

From March 1, 2018, a supplement to the state benefit for families was paid:

- EUR 10 per month for 2 children,
- EUR 66 per month for 3 children,
- additionally, EUR 50 per month for each subsequent child

For example, for family with six children the supplement payment was EUR 216 per month (EUR 66 (for 3) + EUR 50 + EUR 50 + EUR 50).

From 2022 the supplement to the state benefit has been abolished and the family state benefit has been significantly increased:

- EUR 25 per month for one child,
- EUR 50 per month for two children (per each child),
- EUR 75 per month for three children (per each child),
- EUR 100 per month for four and more children (per each child).

The state pays family benefits to all children until they reach the age of 16. Children enrolled in basic or secondary schools or vocational education institutions operating on the basis of basic education have the right to receive family benefits until the age of 20.

In addition, there are four other types of family benefits for which the payment depends on either the age of the child(ren) and/ or the status of the person(s) looking after them: maternity and paternity benefit; childbirth benefit; parental benefit; childcare benefit (additional benefit for child with disabilities). These are not included in the modelling.

## Main changes in tax/benefit system in 2024

No specific changes to labour taxation were made in 2024.

## Memorandum items

### ***Average gross annual wage earnings***

In Latvia the gross earnings figures cover wages and salaries paid to individuals in formal employment including payment for overtime. They also include additional bonuses and payments and other payments such as for the annual and supplementary vacations, public holidays, sick pay (sick-leave certificate A), payment for public holidays and other days not worked, social security compulsory contributions paid by the employees and personal income tax, as well as labour remuneration subsidies.

***Employer contributions to private pension and health schemes***

Some employer contributions are made to private health and pension schemes but there is no relevant information available on the amounts that are paid.

## 2024 Parameter values

Average earnings/yr	Ave_earn	20 176	MoF forecast
Basic allowance	Basic_al		
Minimum non-taxable minimum	MIN_non_taxable	0	
Maximum non-taxable minimum	MAX_non_taxable	6,000	
Taxable income maximum threshold up to which the annual non-taxable minimum will be applied	Income_for_MIN_non_taxable	21,600	
Taxable income minimum threshold up to which the maximum annual non-taxable minimum will be applied	Income_for_MAX_non_taxable	6,000	
Coefficient	Coefficient	0,38462	
Allowance for dependants	Child_al	3,000	
Income tax schedule	Tax_sch	0.20	20 004
	Tax_rate_2	0.23	78 100
	Tax_rate_3	0.31	
Payroll tax - Business risk fee	payroll	4.32	
Income ceiling	Ceiling	78,100	
Employers SSC	SSC_rate1	0.2359	
Employers Solidarity Tax	Sol_tax_rate_1	0.145	
Employees SSC (without health ins.)	SSC_rate2	0.10	
Employees health insurance	Health_ins2	0.005	
Employees Solidarity tax (without health ins.)	Sol_tax_rate_2	0.10	
Child allowances	CA_one	300	
	CA_two	1200	
	CA_three	2700	
	CA_four	4800	
Additional child allowance			
Days in tax year	numdays	365	

\* Calculating taxable income not only the salary is taken into account, but also other income (such as economic activity, pension etc.). Similarly, if a person works in several jobs, the salaries are summed up and the non-taxable minimum is applied to the total revenue.

## 2024 Tax equations

The equations for the Latvian system are mostly on an individual basis.

The functions which are used in the equations (Taper, MIN, Tax etc) are described in the technical note about tax equations. Variable names are defined in the table of parameters above, within the equations table, or are the standard variables “married” and “children”. A reference to a variable with the affix “\_total” indicates the sum of the relevant variable values for the principal and spouse. And the affixes “\_princ” and “\_spouse” indicate the value for the principal and spouse, respectively. Equations for a single person are as shown for the principal, with “\_spouse” values taken as 0.

	Line in country table and intermediate steps	Variable name	Range	Equation
1.	Earnings	earn		
2.	Allowances:	tax_al	P	=MINA(Basic_al+ SSC_empee_princ+ Health_ins2_empee_princ+(Children>0)*(Child_al*Children);earn_princ)
			S	=MINA(Basic_al+ SSC_empee_spouse+ Health_ins2_empee_spouse,earn_spouse)
	Non-taxable minimum	Basic_al	B	=IF(earn<=0;0;(IF(earn-Income_for_MAX_non_taxable<0;MAX_non_taxable;(IF((MAX_non_taxable-Coefficient*(earn-Income_for_MAX_non_taxable))> MIN_non_taxable; (MAX_non_taxable-Coefficient*(earn-Income_for_MAX_non_taxable)); MIN_non_taxable))))
3.	Credits in taxable income	taxbl_cr	B	0
4.	CG taxable income	tax_inc	B	=Positive(earn-tax_al)
5.	CG tax before credits	CG_tax_excl	B	=IF((earn-tax_al)<0,0,IF(tax_al>inc_thresh_1,0,IF(earn>inc_thresh_1,(inc_thresh_1-tax_al)*Tax_rate_1,(earn-tax_al)*Tax_rate_1))+IF((earn-tax_al)<0,0,IF(tax_al>inc_thresh_2,0,IF(earn>inc_thresh_2,(inc_thresh_2-tax_al)*Tax_rate_2,IF(earn>inc_thresh_1,(earn-IF(tax_al>inc_thresh_1,tax_al,inc_thresh_1))*Tax_rate_2,IF(earn>inc_thresh_1,(earn-IF(tax_al>inc_thresh_1,tax_al,inc_thresh_1))*Tax_rate_2,0)))))+IF((earn-tax_al)<0,0,IF(tax_al>inc_thresh_2,IF(earn>inc_thresh_2,(earn-tax_al)*Tax_rate_3,0),IF(earn>inc_thresh_2,(earn-inc_thresh_2)*Tax_rate_3,0))))
6.	Tax credits :	tax_cr	B	0
7.	CG tax	CG_tax	B	=IF(CG_tax_excl-tax_cr>0; CG_tax_excl-tax_cr,"")- tax_cr_non_waste
8.	State and local taxes	local_tax	B	0
9.	Employees' soc security	SSC_empee	B	= MIN(Ceiling;earn)*SSC_rate2
10.	Employees health insurance	Health_ins2		= earn* Health_ins2
11.	Employees' Solidarity tax	Sol_tax_ee	B	=IF(earn<Ceiling,0,(earn-Ceiling)*Sol_tax_rate_2)
12.	Cash transfers	cash_trans	J	=IF(Children<1;0,IF(Children=1;CA_one,IF(Children=2;CA_two,IF(Children=3;CA_three,IF(Children=4;CA_four,IF(Children>4;CA_four/4*Children))))))
13.				
14.	Employer's soc security	SSC_empr	B	= MIN(Ceiling;earn)*SSC_rate1
	Payroll taxes		B	=payroll
15.	Employer's Solidarity tax	Sol_tax_er	B	=IF(earn<Ceiling,0,(earn-Ceiling)*Sol_tax_rate_1)

Key to range of equation B calculated separately for both principal earner and spouse P calculated for principal only (value taken as 0 for spouse calculation) J calculated once only on a joint basis.

## Note

<sup>1</sup> From 1st January 2022 EUR 350 per month, from 1st July 2022 EUR 500 per month.

# Lithuania

---

This chapter includes data on the income taxes paid by workers, their social security contributions, the family benefits they receive in the form of cash transfers as well as the social security contributions and payroll taxes paid by their employers. Results reported include the marginal and average tax burden for eight different family types.

Methodological information is available for personal income tax systems, compulsory social security contributions to schemes operated within the government sector, universal cash transfers as well as recent changes in the tax/benefit system. The methodology also includes the parameter values and tax equations underlying the data.

---

The Lithuanian currency is the Euro (EUR). In 2024, EUR 0.92 was equal to USD 1. In 2024, the average worker in Lithuania was expected to earn EUR 25 757 (Secretariat estimate).

## Personal income tax system

### Central government income tax

#### *Tax unit*

The tax unit is an individual.

#### *Tax allowances*

##### **Standard tax reliefs**

- A *general (basic) allowance (tax-exempt amount)* is applied in calculating the taxable income of residents to the extent the income is derived from employment or similar relationships. However, the size of the annual tax-exempt amount depends on the total amount of annual taxable income before taxes and all allowances (hereinafter – annual income). In 2024 the annual tax-exempt amount is EUR 8 964 for individuals whose annual income does not exceed twelve minimum monthly wages effective on 1 January of a respective calendar year (EUR 11 088 in 2024). For others, the annual tax-exempt amount is calculated using the following formula:

$$\begin{cases} 8\,964 - 0.5 \cdot (\text{annual income} - 11\,088), & \text{if annual income} \leq 26\,004, \\ 4\,800 - 0.18 \cdot (\text{annual income} - 7\,704), & \text{if annual income} > 26\,004. \end{cases}$$

- If according to this formula a negative amount is calculated, then the tax-exempt amount is not applied. As such, no basic personal allowance applies if annual income exceeds EUR 34 370,67. An *allowance for disadvantaged* is applied as follows: in 2024 the annual tax-exempt amount applicable to individuals with a working capacity level of 0-25% or individuals who have reached the retirement age and have an officially recognized high level of special needs, or individuals with high-level disability, is EUR 13 524. The annual tax-exempt amount applicable to individuals who have a working capacity level of 30-55% or individuals who have reached retirement age and have an officially recognized level of medium or low special needs, or individuals with medium or low-level disability, is EUR 12 684. The tax allowance for disadvantaged is not included in the Taxing Wages calculations.

#### **1.1.2.2. Non – standard tax reliefs applicable to income from employment**

- Contributions to 3<sup>rd</sup> pillar pension funds, as well as additional voluntary health insurance contributions paid by the employer on behalf of an employee, are treated as non-taxable income (when such contributions combined do not exceed 25% of the gross wage).
- The following expenses incurred by a resident of Lithuania during the tax period may be deducted from his annual income (a total no more than 25% of annual income worth of expenses):
- Life insurance contributions paid for his own benefit or for the benefit of his spouse or minor children (adopted children) under life insurance contracts which provide for an insurance benefit not only upon the occurrence of an insurance event, but also upon the expiry of the term of the insurance contract.

- 2nd pillar pension contributions, paid by employees, exceeding 3% of taxable wage related income.
- Voluntary 3rd pillar pension contributions paid for his own benefit or for the benefit of his spouse or minor children (adopted children) to pension funds.
- Payments for studies (for vocational training under a formal vocational training programme, when appropriate qualification is obtained, a module of the formal vocational training programme leading to the acquisition of an appropriate competence (competences) and/or for studies when a higher education qualification is obtained) made by studying residents of Lithuania. If the resident does not have annual income, the deduction of expenses from the income can be made by parents and/or spouse. If payments for studies are made with borrowed funds (a loan is taken out from a credit institution for that purpose), the repaid amount of the loan during the tax period may be deducted from income.
- The deduction of expenses described above on life insurance and pension contributions applies only to expenses of up to a total of EUR 1 500 per year. The deduction of expenses for studies is unlimited.

### *Tax schedule*

- A two-bracket progressive personal income tax rate system is applied on taxable wage related income: 20% applies for income equal to or below the threshold of 60 average wages per year (EUR 114 162 in 2024), 32% applies for income above the threshold. The tax is withheld by the employer at 20% rate from employee's wage and paid up to two times a month. The 32% rate is applied and the difference between 20% rate and 32% rate is paid by the employee once per year, when filing the annual income tax return.

### **Regional and local income tax**

There are no regional or local income taxes.

### **Compulsory social security insurance system**

The compulsory social security insurance system consists of the following types of social security contributions:

- pension insurance.
- health insurance.
- sickness insurance.
- maternity insurance.
- unemployment insurance.
- insurance from accidents at work and occupational diseases.

The share of the wage above the "ceiling" is not subject to social security contributions (except Health insurance contributions). In 2024, the ceiling is set at 60 average wages per year (AW).

The AW applied to calculate the social security contribution base is approved by the law on the Approval of Indicators of the Budget of the State Social Insurance Fund of the Republic of Lithuania for the relevant year. It is the average gross monthly earnings (including salary data for the sole proprietorships) published by the State data agency (Statistics Lithuania) of Q3 and Q4 for the year before the previous year and Q1 and Q2 for the previous year.

## **Employees' contributions**

Since 1 January 2021, the rate of the employee's social security contributions is 19.5%, as follows:

- pension insurance – 8.72%.
- health insurance – 6.98%.
- sickness insurance – 1.99%.
- maternity insurance – 1.81%.

Employees pay social security contributions from their gross wage (including basic wage, bonuses, premiums, additional pays, severance pays, compensations calculated for annual and special leave as well as the monetary compensations calculated for unused annual leave, allowances, and other benefits). The assessment period is the calendar month.

## **Employers' contributions**

Since 1 January 2021, the overall rate of the social security contributions of the employer's is 1.47%, as follows:

- unemployment insurance – 1.31% for termless employment contracts and 2.03% for fixed-term employment contracts.
- insurance from accidents at work and occupational diseases – the overall rate is 0.16% (this is the rate that is modelled). In practice four categories of employers are set according to their history of accidents at work and occupational diseases. The tariffs for each of these categories are:

Category	Rate of contribution (%)
Category I	0.14
Category II	0.46
Category III	0.70
Category IV	1.40

A minimum amount ("floor") of social security contributions is applied. Employers must pay a top up of the social security contributions (both employers and employee's contributions) on the difference between minimum monthly wage and the actual wage, in case it is lower than the minimum monthly wage (i.e., the overall SSC, including health insurance contributions, paid both by employee and employer, must be paid from the amount not smaller than a set minimum wage). This applies to all workers except:

- The person has more than one insurer in Lithuania during the respective period or is insured by the State for pension insurance.
- The person receives social insurance pension from the State Social Insurance Fund.
- The person is not older than 24 years.
- The person is disabled.
- The person receives allowance for maternity or paternity leave.

## **Payroll tax**

Employers pay 0.16% of the gross wage to the Guarantee fund.

If a company goes bankrupt the Guarantee fund is used to satisfy employees' claims for the amount of his creditor's claim, but not more than 6 minimal monthly wages.

Employers pay 0.16 % of the gross wage to the Long-term employment benefit fund.

The Long-term employment benefit fund is used for paying severance payments to long-tenure employees having lost jobs.

The ceiling for employer contributions will no longer apply from 2021. Some employers are exempt from these taxes (0.16% to the Guarantee Fund and 0.16% to the Long-term employment benefit fund), namely the Lithuanian Central bank and budget institutions (exempt from both Guarantee and Long-term employment benefit funds contributions), political parties, trade unions, religious communities and societies (exempt from Guarantee fund contributions). Given that the model covers the private sector only (sectors B to N by ISIC Rev.4) and that the Guarantee fund and Long-term employment benefit fund contributions are paid by the majority of employers within those sectors, these contributions are included in the model.

## Universal cash transfers

### *Transfers related to marital status.*

None.

### *Transfers for dependent children*

Child benefit in Lithuania depends on the age and number of children as well as the size of income of the family. In 2018 a non-means-tested universal child benefit was introduced for all families raising children up to 18 years of age and over, if he / she is studying under the general education curriculum, but not longer, until he / she reaches the age of 21 (from 2022 - the age of 23). In 2024, the size of the universal child benefit is EUR 1 155 per child per year. An additional child benefit (EUR 679.8 per child per year, which is paid on top of the universal child benefit) is granted if family's income per person per year did not exceed EUR 4 224 for families with up to two children. The exclusion of part of the work income of working person and unemployment social insurance benefit is applied when granting an additional child benefit to low-income families raising one child or two children: 25% – for persons raising one child or two children (adopted children); 35% – for individuals raising one child or two children (adopted children). For families with three or more children and disabled children the additional child benefit is paid regardless of the amount of family income.

## Main changes in tax/benefit system since 2000

### *Tax system*

- In 2000 the 3<sup>rd</sup> pillar private pension funds were introduced, allowing employees to voluntarily choose to accumulate for additional pension by taking part in the 3<sup>rd</sup> pillar private pension funds or negotiate it with employer as part of employment contract. Contributions to such funds are financed by employees themselves, if they chose to take part in pension scheme voluntarily or by the employer on behalf of the employee.
- In 2003 a possibility to deduct certain expenses from taxable annual income incurred by a resident of Lithuania was introduced.
- In 2004 the 2<sup>nd</sup> pillar pension system was introduced, allowing voluntary participation in the pension accumulation system which consists of a share of social security contributions paid by the employee, transferred to the pension fund on behalf of the employee.
- The personal income tax rate was lowered gradually from 33% to 27% as of 1 July 2006, then further to 24% in 2008 and again to 15% in 2009.

- In 2009 employee health insurance contributions were introduced together with a lower personal income tax rate.
- In 2009 a flat tax-exempt amount was replaced with a regressive tax-exempt formula, gradually diminishing the tax-exempt amount at some level of income, therefore introducing an element of progressivity into taxation of wages.
- In 2014 the 2<sup>nd</sup> pillar pension system was modified. A possibility to increase the size of the private pension contribution was introduced by allowing employees to contribute additionally from their own gross wage with an additional contribution from the State.
- In 2017 the deduction of expenses described in 1.122. on life insurance and voluntary 3rd pillar pension funds savings tax reliefs were given a “ceiling” and apply only to insurance premium of up to a total of EUR 2 000 per year.
- In 2018 the additional tax-exempt amount (child allowance) was replaced by direct child benefits, which are paid without testing for family income.
- In 2018 a minimum amount (“floor”) of social security contributions was established. Employers calculate and pay employer’s share of social security contributions from a base not lower than minimum monthly wage. As of 1 July 2018, employers must pay not only the employer’s share, but also the employee’s share of social security contributions from a base not lower than minimum monthly wage.
- In 2019 a labour taxation reform was introduced. Most of the employer’s SSC (a total of 28.9 p.p.) were shifted to the employee. The overall employer’s SSC rate in 2018 was 30.5%, an aggregated of:
  - pension insurance – 22.3%.
  - health insurance – 3%.
  - sickness insurance – 1.4%.
  - maternity insurance – 2.2%.
  - unemployment insurance – 1.4%.
  - insurance from accidents at work and occupational diseases – 0,2%.
- Starting from 1 January 2019 pension insurance, health insurance, sickness insurance and maternity insurance were shifted to the employee side ( $22.3\%+3\%+1.4\%+2.2\%=28.9\%$ )
- This resulted in a gross salary increase by 28.9% (enforced by law), as well as recalculation of SSC, personal income tax and payroll tax rates accordingly to neutralize the shift. Moreover, a share of SSC, covering the general part of pension, was shifted to personal income tax to ensure a sustainable financing source for financing the general part of pension from the State budget. Finally, personal income tax and SSC rates were reduced by a total of 1.55 p.p. (in the new taxation system) to ensure that take home pay does not decrease in case a person decides to participate in the 2<sup>nd</sup> pillar pension system after the 2019 reform (which includes employee’s contribution).
- In 2019, a two-bracket progressive taxation for labour income was introduced. The first bracket is taxed at 20%, while the second bracket – at 27% personal income tax rate (above the threshold of 120 average wages per year).
- In 2019, the ceiling for both employee’s and employer’s SSC (excluding health insurance contributions) and payroll taxes (contributions to the Guarantee fund and Long-term employment benefit fund) was introduced. It is applicable for the annual income above 120 average wages.
- In 2020, the tax rate for second bracket was increased from 27% to 32% personal income tax rate and the threshold above which 32% rate is applied was reduced from 120 to 84 average wages per year.

- In 2020, the ceiling for both employee's and employer's SSC (excluding health insurance contributions) and payroll taxes was reduced from 120 to 84 average wages per year.
- From 2021 the ceiling is applied only for the employee's overall employment income (combined from all employers, as opposed to each employer individually, as was applied previously), except for health insurance contributions. The ceiling is no longer applied for the SSC paid by the employer.
- Since 2021 the ceiling for employee's SSC (excluding health insurance contributions) was reduced from 84 to 60 average wages per year.
- Since 2021 the personal income tax threshold above which 32% rate is applied was reduced from 84 to 60 average wages per year.
- In 2022 the basic allowance formula was changed so that the annual basic allowances are first tapered rapidly (until around 12 average wages) and then gradually. Hereby the level of the taxation was reduced by increasing non-taxable amount only for those individuals whose monthly income did not exceed the average wage. Applying the non-taxable amount to individuals with income above one average wage maintained unchanged.
- In 2022 the maximum non-taxable amount was increased from EUR 400 up to 460 and then from 460 up to 540 per month. Proportionally increased non-taxable amounts applicable to disabled.
- From 2022 temporary tax relief that was applicable from 2019 until 2021 (payments for repairs of housing (except renovation of multi-apartments), repairs of passenger cars and childcare services (made for one's own benefit or for the benefit of one's spouse)) was no longer available.
- In 2023 the maximum non-taxable amount was increased from EUR 540 up to 625 per month. Proportionally increased non-taxable amounts applicable to disabled.
- In 2024 the maximum non-taxable amount was increased from EUR 625 up to 747 per month. Proportionally increased non-taxable amounts applicable to disabled

### **Benefit system**

- Between 2000 and June 2004, the child benefit was paid for all children up to 3 years of age, provided that none of the parents received maternity (paternity) benefits. Families with three or more children, below a set threshold of income per family member, were given more generous benefit for children up to 3 years of age, as well as benefit for children from 3 years to 16 years of age.
- Between July 2004 and 2008, the child benefit was paid without testing family income. The range of the age of children for which the benefit was paid depended on the size of the family. Different age ranges were applied for families with three or more children (the top of the range remained 18 years throughout the period) and families with up to two children (the top of the age range was gradually increased from 7 years to 9 years in 2006, from 9 years to 12 years in 2007 and from 12 years to 18 years in 2008).
- In 2009, testing of family income was introduced for families with up to two children above 3 years of age.
- In 2010, the testing for the fact and the size of the maternity (paternity) benefit was introduced for children up to 2 years of age and testing of family income was extended to all children above 2 years of age.
- Between 2012 and 2016, testing of family income applied to all children and only in families with three or more children the child benefit was paid for children over 7 years of age.
- In 2017, testing of family income was abolished for families with three or more children regarding child benefits. Moreover, families with up to two children under 7 years of age were included in the means-tested child benefit scheme.

- In 2018, a universal child benefit replaced the abolished tax exempt amount for children. The universal child benefit is paid for every child from birth to the age of 18 years and over, if he / she is studying under the general education curriculum, but not longer, until he / she reaches the age of 21. The size of the universal child benefit is EUR 30.02 per child per month. Large and low-income families receive the additional child benefit (on top of the universal child benefit): to children from birth to the age of 2 years amounting to EUR 28.5 per child per month and to children from 2 to 18 years of age amounting to EUR 15.2. Since 1 January 2018 the exclusion of part of the work income of working person is applied when granting an additional child benefit to low-income families raising one child or two children: 20% – for persons raising one child or two children (adopted children); 30% – for individuals raising one child or two children (adopted children).
- In 2019, the universal child benefit is paid for every child from birth to the age of 18 years and over, if he / she is studying under the general education curriculum, but not longer, until he / she reaches the age of 21. The size of the universal child benefit increased from EUR 30.02 to EUR 50.16 per child per month, while for the disabled children – to EUR 69.92. Large and low-income families receive the additional child benefit (on top of the universal child benefit) amounting to EUR 20.14 per child per month.
- In 2020, the universal child benefit is paid for every child from birth to the age of 18 years and over, if he / she is studying under the general education curriculum, but not longer, until he / she reaches the age of 21. The size of the universal child benefit increased from EUR 50.16 to EUR 60.06 per child per month. The size of the additional child benefit (on top of the universal child benefit) for large and low-income families increased from EUR 20.14 to EUR 40.17 per child per month, the additional child benefit of the same amount has been established for disabled children. Since 1 June 2020 part of the disregard income when granting an additional child benefit to low-income families raising one child or two children have been increased (+5 percentage points). The exclusion of part of the work income of working person and unemployment social insurance benefit is 25% – for persons raising one child or two children (adopted children); 35% – for individuals raising one child or two children (adopted children).
- In 2021, the universal child benefit is paid for every child from birth to the age of 18 years and over, if he / she is studying under the general education curriculum, but not longer, until he / she reaches the age of 21. The size of the universal child benefit increased from EUR 60.06 to EUR 70 per child per month. Large and low-income families and disabled children receive the additional child benefit (on top of the universal child benefit) amounting to EUR 41.2 per child per month.
- In 2022, the universal child benefit is paid for every child from birth to the age of 18 years and over if he / she is studying under the general education curriculum, but not longer, until he / she reaches the age of 23. The size of the universal child benefit increased from EUR 70 to EUR 73.5 (from 1 June 2022 – to EUR 80.5) per child per month. Large and low-income families and disabled children receive the additional child benefit (on top of the universal child benefit) amounting to EUR 43.26 (from 1 June 2022 – EUR 47.38) per child per month.
- In 2023, the universal child benefit is paid for every child from birth to the age of 18 years and over if he / she is studying under the general education curriculum, but not longer, until he / she reaches the age of 23. The size of the universal child benefit increased from EUR 80.5 to EUR 85.75 per child per month. Large and low-income families and disabled children receive the additional child benefit (on top of the universal child benefit) amounting to EUR 50.47 per child per month.
- In 2024, the universal child benefit is paid for every child from birth to the age of 18 years and over if he / she is studying under the general education curriculum, but not longer, until he / she reaches the age of 23. The size of the universal child benefit increased from EUR 85.75 to EUR 96.25 per child per month. Large and low-income families and disabled children receive the additional child benefit (on top of the universal child benefit) amounting to EUR 56.65 per child per month.

## ***Changes to labour taxation and benefit system due to the covid-19 pandemic***

In relation to the COVID-19 pandemic, the Lithuanian Government and the tax authorities decided to apply certain personal income tax and social security contribution related measures to assist taxpayers with their ongoing obligations.

Related measures by the PIT administrator - State Tax Inspectorate under the Ministry of Finance of the Republic of Lithuania (hereinafter - STI):

- STI published a list of taxpayers which were directly hit and experienced adverse effects of COVID-19 pandemic. These taxpayers are automatically subject to certain reliefs, applicable for tax debts incurred before 31 August 2021, and the following fiscal measures apply to the listed entrepreneurs:
  - **Recovery of unpaid taxes is suspended.** Interest on late payment are not to be calculated;
  - **Accumulated unpaid taxes have can be paid without interest until 31 December 2022.** In order to conclude a tax loan agreement without interest, taxpayers have to submit an application to the STI by 31 August 2021, and the agreement must be concluded by 31 December 2021. Otherwise, all accumulated unpaid taxes should be paid by 31 October 2021.
  - **Possibility to pay accumulated unpaid taxes exists beyond 31 December 2022.** Companies that cannot pay accumulated taxes within the set deadline can apply to STI for postponement of tax payment. Interest will be charged only on subsequent installments.

Taxpayers not on the COVID-19 list, but which have also experienced negative consequences of COVID-19, may apply to the tax authorities for the reliefs, as well as for conclusion of a tax credit agreement.

Related measures by the SSC administrator (State Social Insurance Fund Board):

- Aid measures apply to adversely affected insurers. An adversely affected insurer is an insurer whose activities are restricted because the quarantine has been announced in the territory of the Republic of Lithuania or the quarantine has been announced in the territory of the municipality, and if an insurer specifies in the prescribed application that he operates in this territory of the municipality, and:
  - who is automatically listed on the list “Legal entities that are subject to tax aid measures due to COVID-19 without submitting an application” that is published by the STI; or
  - whose application for tax aid measures due to COVID-19 has been approved by the STI.

Insurers, having not found themselves among the published taxpayers, but having suffered adverse effects due to COVID-19, may apply to STI for the said aid measures by submitting an application for the application of selected aid measures.

Recovery of unpaid taxes is suspended. State Social Insurance Fund Board would not start tax recovery if these companies have social security debts arising from a declaration filed from 16th March 2020 till 16th of June 2020 and from 7th of November 2020 (in local quarantines from 26th of October 2020) till the end of quarantine.

- The annual tax-exempt amount for the fiscal year 2020 was increased from EUR 4200 (as budgeted for 2020 before COVID-19) to EUR 4800 for individuals whose annual income does not exceed twelve minimum monthly wages effective on 1 January 2020 (EUR 7 284 in 2020). For others, the annual tax-exempt amount is estimated using the following formula:  

$$4\,800 - 0.19 \times (\text{annual income} - \text{twelve minimum monthly wages effective on 1 January of a respective calendar year}).$$

- One-off child benefit to reduce the effects related with the COVID-19 pandemics was paid out in 2020. Low-income families with up to two children and families with three or more children, as well as families raising children with disabilities, are entitled to one-off payment of 200 euros per child. Other families with children are entitled to one-off payment of 120 euros per child. One-off child benefit was paid out for children who were / became child benefit eligible according to the Law on Benefits for Children throughout the period between 16 May 2020 and 31 December 2020.

## Memorandum items

### *Average gross annual wage earnings calculation*

The average gross wage is estimated by Statistics Lithuania. For the purpose of this exercise the average annual earnings equal twelve average monthly gross wages in the industry sectors B–N by ISIC Rev.4 (private sector, including individual enterprises). The gross wage is monetary remuneration, which includes the basic wage, additional pays, overtime, compensations calculated for annual and special leave and payment for idle time.

### *Employer contributions to private pension and health schemes*

**2<sup>nd</sup> pillar private pension funds.** Between 2004 and 2018, employees could voluntarily choose to participate in the pension accumulation system which in 2018 consisted of three types of contributions to the pension fund: (1) a share of social security contributions paid by the employer was transferred to the pension fund on behalf of the employee (2 p.p. from the total contribution paid by the employer); (2) an additional contribution of 2% deducted from the employee's gross wage to the pension fund; (3) another 2% of the Lithuanian average gross wage was transferred by the State. In total, if an employee chooses to participate in the pension accumulation system, roughly 6% (2+2+2) of gross wage was accumulated in the pension fund. However, the supplementary part of a social insurance pension will decrease for the period of participation in the accumulation of pensions depending on the amount of contributions paid. From 2019 all persons at age below 40, insured by social insurance, are enrolled in the 2<sup>nd</sup> pillar system with a possibility to opt-out during the six months of the enrollment process (after this period the opt-out is not possible). If the person chooses to opt-out during the first auto-enrollment procedure, the procedure of auto-enrolment will be repeated every 3 years until the person reaches the age of 40. Pension accumulation system consists of two types of contributions to the private pension fund: (1) employee's contribution – 3% deducted from the employee's gross wage; (2) State's contribution – 1.5% of the Lithuanian average gross wage is transferred by the State on behalf of the employee. Therefore, the overall contribution to the private 2<sup>nd</sup> pillar pension funds is 4.5%, which corresponds to 6% (2+2+2) applicable before the tax reform of 2019.

**3<sup>rd</sup> pillar private pension funds.** Employees can voluntarily choose to accumulate for additional pension by taking part in the 3<sup>rd</sup> pillar private pension funds or negotiate it with employer as part of employment contract. Contributions to such funds are financed by employees themselves, if they chose to take part in pension scheme voluntarily or by the employer on behalf of the employee. Personal income tax relief related to the 3<sup>rd</sup> pillar contributions are applied (see section on Non – standard tax reliefs applicable to income from employment).

**Additional voluntary health insurance.** Employees can voluntarily choose to additionally insure their health for services and medicines that are not covered under the mandatory health insurance scheme. Contributions to such insurance schemes are financed by employees themselves and / or third parties on behalf of the employee (employer, family members, etc.). Personal income tax relief related to the contributions paid by the employers are applied (see section on Non – standard tax reliefs applicable to income from employment).

## 2024 Tax equations

The equations for the Lithuanian system are mostly on an individual basis. But child benefit is only calculated once.

The functions which are used in the equations (Positive, MIN, etc) are described in the technical note about tax equations. Variable names are defined in the table of parameters above, within the equations table, or are the standard variables “married” and “children”. A reference to a variable with the affix “\_total” indicates the sum of the relevant variable values for the principal and spouse.

	Line in country table and intermediate steps	Variable name	Range	Equation
1	Earnings	earn		=Ave_earn
		earn_net	J	=earn_total-CG_tax_total-SSC_empee_total
2	Allowances	basic_al	B	=Positive( IF( earn<Max_basic_al; earn; IF( earn<Threshold_max_basic_al; Max_basic_al; IF( earn < Brake_point_basic_al; Max_basic_al-Reduction_coefficient*(earn-Threshold_max_basic_al); Max_basic_al_2-Reduction_coefficient_2*(earn-Threshold_max_basic_al_2) ) ) ) )
3	Credits in taxable income	taxbl_cr	B	0
4	CG taxable income	tax_inc	B	=earn-basic_al
5	CG tax before credits	CG_tax_excl	B	=Tax(tax_inc,Tax_sch)
6	Tax credits (wastable)	tax_cr		0
7	CG tax	CG_tax	B	=Positive(CG_tax_excl-tax_cr)
8	State and local taxes	local_tax	B	0

Key to range of equation B calculated separately for both principal earner and spouse P calculated for principal S calculated on the spouse J calculated once only on a joint basis.

# Luxembourg

---

This chapter includes data on the income taxes paid by workers, their social security contributions, the family benefits they receive in the form of cash transfers as well as the social security contributions and payroll taxes paid by their employers. Results reported include the marginal and average tax burden for eight different family types.

Methodological information is available for personal income tax systems, compulsory social security contributions to schemes operated within the government sector, universal cash transfers as well as recent changes in the tax/benefit system. The methodology also includes the parameter values and tax equations underlying the data.

The national currency is the Euro (EUR). In 2024, EUR 0.92 equalled USD 1. The Secretariat has estimated that in that same year the average worker earned EUR 74 296 (Secretariat estimate).

## Personal income tax system

### ***Taxes levied by central government.***

#### *Tax unit*

Spouses and partners are taxed jointly on their income. The income of minor children is included in determining the couple's taxable income. However, any earned income that children may derive from work is excluded from joint taxation.

From 2018 onwards, there is the option to file separate tax returns for married couples and civil partners.

#### *Tax reliefs and tax credits*

##### **Standard reliefs in the form of deductions from income**

- Wage-earners are entitled to a standard minimum deduction of EUR 540 for work-related expenses other than travel, unless their actual deductible expenses are higher. This deduction is doubled for spouses taxed jointly.
- The first 4 distance units (i.e.,  $4 * 99 = \text{EUR } 396$  per year) of the lump sum deduction for travel expenses between a taxpayer's home and his working places are abolished. The maximum deduction is limited to EUR 2 574 per year.
- Like other taxpayers, wage-earners having no special expenses (interest charges, insurance premiums or contributions other than for social security) may take a standard deduction of EUR 480 for special expenses. Actual insurance premiums are deductible up to the limit set by law.
- If both spouses have earned income and are taxed jointly, they qualify for an earned income allowance of EUR 4 500.
- Social security contributions: contributions paid to compulsory health insurance and pension schemes are deductible in full.
- Dependency insurance: the dependency contribution is not deductible for income tax purposes.

##### **Standard reliefs in the form of tax credits**

- Wage-earners and pensioners receive a refundable tax credit. The tax credit will increase progressively until it is capped at EUR 600 per year for taxpayers earning between EUR 11 265 and EUR 40 000. Between EUR 40 000 and EUR 80 000, the tax credit will decline progressively. Over EUR 80 000, the tax credit is 0.
- From 2024 onwards, a new so-called CO2 tax credit is introduced. The tax credit amounts to EUR 168 for taxpayers earning up to EUR 40 000. Between EUR 40 000 and EUR 80 000, the tax credit declines progressively. Above EUR 80 000, the tax credit is 0.
- Single parents receive a refundable tax credit. The tax credit increases to EUR 2 505 per year for taxpayers earning up to EUR 60 000. Between EUR 60 000 and EUR 105 000, the tax credit declines progressively. Over EUR 105 000 the tax credit is EUR 750 like in the past.
- A new tax credit for social minimum wage earners was introduced in January 2019, and slightly modified in 2022. The tax credit is fixed to EUR 70 per month for employees earning a monthly gross wage between EUR 1 800 and EUR 3 000. For employees with monthly gross wages

between EUR 3 000 and EUR 3 600, the tax credit declines progressively. Employees with monthly gross wages higher than EUR 3 600 will not benefit anymore from the tax credit. This tax credit come on top of the already existing tax credit for employees.

### **Non-standard allowances deductible from taxable income**

- Interest charges are deductible insofar as they are not considered operating expenses or acquisition expenses, and provided they are unrelated economically to the exempt income.
- Taxpayers may deduct premiums paid to insurers licensed in an EU country in respect of life, death, accident, disability, illness or liability insurance, as well as dues paid to recognised mutual assistance companies.
- From 2017 onwards, the deductibility of interest charges and for insurance and legal responsibility is aggregated under one category and limited to EUR 672.
- Payments to an insurance company or credit institution in respect of an individual retirement scheme are deductible. These payments are capped at EUR 3 200 and must meet certain investment policy constraints. Since 2022, payments made to a Pan-European Personal Pension Product (PEPP) are tax deductible under certain conditions. The PEPP enables retirement savers to transfer the benefits accumulated in one Member State to another, when moving between them. This new product will coexist alongside the existing complementary pension scheme and the same tax provisions apply (e.g. deduction limit of EUR 3200).
- Contributions to building society savings are deductible up to the limit of EUR 672. If the taxpayer is under 40 years old, this limit will be doubled to EUR 1 344.
- Interest charges in respect of the rental value of owner-occupied housing are deductible only up to an annual ceiling. From 2024 onwards, those ceilings have been raised. During the first five years, the ceiling is EUR 4 000; for the following five years it is EUR 3 000 thereafter it is EUR 2 000. These ceilings are increased by an equal amount for the taxpayer's spouse/partner and for each qualifying child.
- As from 1 January 2009, the maximal deduction of premium related to the mortgage life insurance on the taxpayer's principal residence is EUR 6 000. This ceiling is increased by an equal amount for the taxpayer's spouse/partner and by 1 200 for each qualifying child. For taxpayers over the age of 30, the allowable deduction of EUR 6 000 is increased by 8% (e.g., EUR 480) for each year over 30, with a ceiling of 160%.
- Upon request, taxpayers may be granted exemptions for extraordinary expenses that are unavoidable, and that considerably reduce their ability to pay taxes (e.g., uninsured health care costs, support for needy relatives, uninsured funeral costs beyond the taxpayer's means, domestic or childcare expenses, expenses for children outside the taxpayer's household, or expenses for children in a single-parent household).
- The deductibility for domestic costs is set at EUR 5 400.
- From 2019 onwards, self-employed have the possibility to deduct premiums paid into a supplementary pension scheme for the self-employed as special expenses, as well as a flat-rate and final discharge. The financing of supplementary pension schemes is deductible up to 20% of annual income.

### *Tax schedule reliefs*

Income tax is determined on the basis of the following schedule (amounts in Euros):

0% for the portion of income up to 12 438
8% for the portion of income between 12 438 and 14 508
9% for the portion of income between 14 508 and 16 578
10% for the portion of income between 16 578 and 18 648
11% for the portion of income between 18 648 and 20 718
12% for the portion of income between 20 718 and 22 788
14% for the portion of income between 22 788 and 24 939
16% for the portion of income between 24 939 and 27 090
18% for the portion of income between 27 090 and 29 241
20% for the portion of income between 29 241 and 31 392
22% for the portion of income between 31 392 and 33 543
24% for the portion of income between 33 543 and 35 694
26% for the portion of income between 35 694 and 37 845
28% for the portion of income between 37 845 and 39 996
30% for the portion of income between 39 996 and 42 147
32% for the portion of income between 42 147 and 44 298
34% for the portion of income between 44 298 and 46 449
36% for the portion of income between 46 449 and 48 600
38% for the portion of income between 48 600 and 50 751
39% for the portion of income between 50 751 and 110 403
40% for the portion of income between 110 403 and 165 600
41% for the portion of income between 165 600 and 220 788
42% for the portion of income exceeding 220 788

The income tax liability of single taxpayers is determined by applying the above schedule to taxable income.

The income tax liability of married taxpayers and partners corresponds to double the amount obtained if the above schedule is applied to half of their income (class 2).

For widow(er)s, taxpayers with a dependent child allowance and persons over 64 years of age (class 1a), tax is calculated as follows: the schedule is applied to adjusted taxable income reduced by half of the difference between that amount and EUR 49 752, with the marginal tax rate capped at 39% for the portion of income between EUR 41 814 and EUR 110 403, 40% for the portion of income between EUR 110 403 and EUR 165 600, 41% for the portion of income between EUR 165 600 and EUR 220 788, and 42% for the portion of income exceeding EUR 220 788.

Income tax as determined by the applicable schedules is subject to a 7% “solidarity” surtax to finance the employment fund. The rate is 9% for the taxable income exceeding EUR 150 000 (tax classes 1 and 1a), respectively EUR 300 000 (tax class 2).

### *Income exemptions*

A taxpayer may claim a deduction for a dependent child under 21 years of age who is not part of the household. This deduction is allowed for expenses actually incurred but may not exceed EUR 4 422.

### **Local (municipal) taxes**

No particular income tax is levied by municipalities, which receive a direct share of the income tax revenue collected by the State. This share is equal to 18% of tax revenue.

## Compulsory social security contributions to schemes operated within the government sector

	Employer's share (%)	Employee's share (%)	Ceiling on contributions (in euros)
a) Pension and disability insurance	8	8	154 255,68
b) Health insurance	3.05	3.05	154 255,68
c) Dependency insurance		1.4	Monthly allowance 642,73 *
d) Health in the workplace	0.14		
e) Accident insurance	0.70		

\*(Monthly allowance: EUR 642,73 = 0.25\* social minimum salary / 12). The social minimum salary in 2024 is equal to EUR 30 851,16.

No distinction is made according to family status or gender.

As from 1 January 2009 the differences in social security contributions between workers and employees are abolished.

Employers must make payments to the Employers' Mutual Insurance Scheme. This scheme provides insurance for employers against the financial cost of continued payment of salaries or wages to workers who become incapacitated. Employers are required to pay the remuneration of an employee who is unable to work until the end of the month in which the seventy-seventh day of incapacitation occurs within a reference period of twelve successive calendar months. The Scheme is administered by a Board of Directors which is mainly composed of employer representatives (Chamber of Commerce, Chamber of Trade, Chamber of Agriculture and Federation of Independent Intellectual Workers). Employer contributions depend on the rate of "financial absenteeism" within the company and range from 0.01% to 1.36 %. A representative rate of 1.85% is used in the *Taxing Wages* calculations.

## Universal cash transfers

### ***For married persons***

None.

### ***For dependent children***

Every child raised in the Grand Duchy entitles the person on whom the child is dependent to a monthly family allowance. Family allowances are adjusted regularly for the cost of living.

There has been a reform of the family allowance system in 2016.

For families that are eligible for family allowance before 1 August 2016, the old system remains, and the amounts for 2021 are:

Effective date	As of 1 July 2006,
1 eligible child	EUR 185.60
2 eligible children	EUR 440.72
3 eligible children	EUR 802.74

Starting with the fourth eligible child, the allowance is raised by EUR 361.82 per child.

Additionally, a child bonus amounting to EUR 76.88 per child per month is paid in cash irrespective of the taxable income of the parents as from 1 January 2009. This amount is paid by the National Family Benefits Administration.

For children born on or after 1 August 2016, the child bonus amounting to EUR 76.88 per child per month has been abolished and incorporated in the new higher amounts. The indexation of the amount of child benefit with retroactive effect to 1 October 2021 has come into effect since 1 January 2022. For 2024, the new amounts were as follows:

Effective date	As of 1 August 2016,
1 eligible child	EUR 299,86
2 eligible children	EUR 599,72
3 eligible children	EUR 899,58

The amounts indicated above (under the old regime as well as under the new regime) are increased by EUR 22,67 for children aged 6 to 11 and by EUR 56,57 for those aged 12 years or older.

## Main changes since 2008

### *Partnerships*

The Act of 9 July 2004 introduced the notion of partnerships into tax law. The Act construes the term “partnership” as a relationship between two persons, called “partners”, of opposite sex or the same sex, who live together as a couple and declare themselves as such.

As from 1 January 2008, the fiscal treatment of the partnerships is modified. The deduction for extraordinary expenses is replaced by the joint taxation of partners as it already exists for spouses.

## Memorandum item

### *Identification of the average worker*

Average gross hourly wages by industry and by gender are determined on the basis of biannual surveys on industry wages and working hours. These surveys cover gross compensation for regular hours (working hours + leave time) plus overtime pay. Hourly wages include bonuses and allowances such as premiums for output, production or productivity. In contrast, non-periodic compensation (bonuses, profit-sharing) that is not paid systematically in each pay period is not included. Nevertheless, in order to allow for comparisons between countries, gross annual pay is adjusted on the basis of average non-periodic compensation as calculated from triennial surveys of labour costs.

Regarding working hours, the time taken into account is the time effectively offered, including regular working hours, overtime, night shifts and work on Sunday.

## 2024 Tax equations

The equations for the Luxembourg system are on a joint basis except for social security contributions. The functions which are used in the equations (Taper, MIN, Tax etc.) are described in the technical note about tax equations. Variable names are defined in the table of parameters above, within the equations table, or are the standard variables “married” and “children”. A reference to a variable with the affix “\_total” indicates the sum of the relevant variable values for the principal and spouse. And the affixes “\_princ” and “\_spouse” indicate the value for the principal and spouse, respectively. Equations for a single person are as shown for the principal, with “\_spouse” values taken as 0.

	Line in country table and intermediate steps	Variable name	Range	Equation
1.	Earnings	earn		
2.	Allowances:			
	Basic	basic	J	IF(earn_spouse=0,'1,2)*gen_dedn

	CO2 tax credit			=IF(AND(EARN_PRINC>co2_tc_incomelim_1, EARN_PRINC <co2_tc_incomelim_2),co2_tc_base,IF(AND( EARN_PRINC >co2_tc_incomelim_2, EARN_PRINC <co2_tc_incomelim_3),co2_tc_base-(EARN_PRINC - co2_tc_incomelim_2)*co2_tc_decr_rate,0))+IF(AND(EARN_SPOUS>co2_tc_incomelim_1, EARN_SPOUS<co2_tc_incomelim_2),co2_tc_base,IF(AND( EARN_SPOUS >co2_tc_incomelim_2, EARN_SPOUS <co2_tc_incomelim_3),co2_tc_base-( EARN_SPOUS - co2_tc_incomelim_2)*co2_tc_decr_rate,0))
7.	CG tax	CG_tax	J	tax_excl-tax_cr
8.	State and local taxes	local_tax	J	0
9.	Employees' soc security	SSC	B	SSC_rate*MIN(earn, SSC_ceil)+infirm*Positive(earn-infirm_abatement*min_salary)+()
	deductible portion	SSC_ded	B	SSC_rate*MIN(earn, SSC_ceil)
11.	Cash transfers	cash_trans	J	((Children='1')*(CB_1+CB_ex)+'(Children=2)*(CB_2+2*CB_ex))*12+Children*ch_bonus
13.	Employer's soc security	SSC_empr	B	(SSC_empr+workhealth)*MIN(earn, SSC_ceil)+SSC_acc*MIN(earn,SSC_ceil)+empr_mutual*MIN(AA7,SSC_ceil)

Key to range of equation B calculated separately for both principal earner and spouse P calculated for principal only (value taken as 0 for spouse calculation) J calculated once only on a joint basis.

# Mexico

---

This chapter includes data on the income taxes paid by workers, their social security contributions, the family benefits they receive in the form of cash transfers as well as the social security contributions and payroll taxes paid by their employers. Results reported include the marginal and average tax burden for eight different family types.

Methodological information is available for personal income tax systems, compulsory social security contributions to schemes operated within the government sector, universal cash transfers as well as recent changes in the tax/benefit system. The methodology also includes the parameter values and tax equations underlying the data.

The national currency is the peso (MXN). In 2024, MXN 18.31 were equal to USD 1. That year, the estimated earnings of the average worker are MXN 199 946 (Secretariat estimate).

## Personal Income Tax

### Central government income tax

#### *Tax unit*

Each person is taxed separately.

#### *Tax allowances and tax credits*

#### **Standard tax reliefs**

There are two basic allowances, a yearly holiday bonus and an end-of-year bonus.

- Holiday Bonus: As a result of the amendment of the Mexico's Labour Law that entered into force in 2023, stipulates a minimum holiday bonus of 25% of twelve days of the worker's wage. The maximum exemption according to the Tax Law is equivalent to 15 Units of Measure and Update (UMAs).<sup>1</sup>
- End-of-year bonus: The minimum end-of-year bonus established in the Labour Law is 15 days of the worker's wage. The Tax Law exempts end-of-year-bonuses up to 30 UMAs.

#### **Main non-standard tax reliefs**

Deductions:

- Compulsory school transportation costs.
- Medical expenses (doctor, dental, psychology and nutrition fees and hospital expenses): For expenses made by the taxpayer on behalf of his or her spouse and straight-line relatives, the deduction is allowed only if the taxpayer's relative earns less than the minimum annual wage.
- Complementary contributions of certain retirement accounts are considered eligible as long as they do not exceed 10% of taxable income and MXN 198 032 (5 annual UMAs).
- Funeral expenses: for the spouse and straight-line relatives up to 1 annual UMA.
- Charitable donations made to institutions such as:
  - Federal, state, and municipal governments.
  - Non-profit organisations involved in the fields of social beneficence, education, culture, and research and technology.
- Deposits on special savings accounts, payments of insurance premium of pension plans, and for the acquisition of shares of investment societies as long as they do not exceed MXN 152 000.
- Health insurance premiums for individuals, if the beneficiary is the taxpayer, and/or his family.
- Real interest expenditure of mortgage loans if the value of the property does not exceed MXN 6 065 231 (750 000 Investment Units). Real interest expenditure is defined as the excess of interest expense over the inflation rate.<sup>2</sup>
- Deduction of taxpayer's educational expenditures for himself, on behalf of his/her spouse, parents or children, among others, for the following educational levels.

Educational Level	Maximum Annual Deduction (MXN)
Kinder Garden	14 200
Primary Education	12 900
Secondary Education	19 900
Technical Profession	17 100
High School	24 500

Since 2016, the limit amount for personal deductions was increased. The new limit is the minimum between 15% of taxpayer's gross income and an amount equivalent to 5 annual UMAs (MXN 198 032 in 2024). The limit does not apply to private school's tuition, complementary contributions to retirement's personal accounts, professional fees, and medical expenses in the event of incapacity or disability. Since 2022 this limit applies to charity donations.

### Employment subsidy credit

By Presidential Decree of May 1, 2024, the employment subsidy credit table was replaced by a monthly amount equivalent to 11.82% of the monthly value of the UMA, applicable uniformly to all workers whose monthly taxable income for salary does not exceed MXN 9 081, this will be applied against their income tax of the corresponding calendar month. In cases in which the tax payable by the employee is less than the monthly employment subsidy credit, the difference cannot be carried forward or refunded.

Until April 30, 2024 the employment subsidy credit was decreasing on workers' income and was assigned based on a table of income brackets. For monthly income higher than MXN 7 382 no employment subsidy credit was given. Employees with an income tax lower than the credit received in cash the difference along with their salary. The rest of the workers that received the credit were entitled to a reduction in their tax burden. The employment subsidy credit was paid by the employers who may credit it against their tax liabilities; the credit therefore represented a fiscal cost for the government.

### *Tax schedule and other tables*

#### Tax schedule

Taxable income (MXN)		Fixed quota (MXN)	Tax on the amount in excess of the lower limit (%)
Lower Limit	Upper Limit		
0.01	8 952.49	0.00	1.92
8 952.50	75 984.55	171.88	6.40
75 984.56	133 536.07	4 461.94	10.88
133 536.08	155 229.80	10 723 .55	16.00
155 229.81	185 852.57	14 194.54	17.92
185 852.58	374 837.88	19 682.13	21.36
374 837.89	590 795.99	60 049.40	23.52
590 796.00	1 127 926.84	110 842.74	30.00
1 127 926.85	1 503 902.46	271 981.99	32.00
1 503 902.47	4 511 707.37	392 294.17	34.00
4 511 707.38	And over	1 414 947.85	35.00

The income tax schedule is updated once the accumulated inflation reaches 10%. The last update was in 2023.

### Employment subsidy credit table

Until April 30, 2024 for annual taxable income in a certain income range, the employment subsidy credit was given in the third column of the following illustrative table:

Lower limit (MXN)	Upper limit (MXN)	Tax credit (MXN)
0.0	21 227.52	4 884.24
21 227.53	31 840.56	4 881.96
31 840.57	41 674.08	4 879.44
41 674.09	42 454.44	4 713.24
42 454.45	53 353.80	4 589.52
53 353.81	56 606.16	4 250.76
56 606.17	64 025.04	3 898.44
64 025.05	74 696.04	3 535.56
74 696.05	85 366.80	3 042.48
85 366.81	88 587.96	2 611.32
88 587.97	And Over	0.00

For 2024 the monthly amount of the employment subsidy credit is MNX 390, effective from May 1 to December 31, 2024.

### **State and local income taxes**

States do not levy taxes on income.

### **Payroll taxes**

Mexico does not have a Federal pay-roll tax. However, most States apply a state pay-roll tax with an average rate of 2.82%. These taxes are not considered in this Report since there are a wide range of practices with respect to the definition of the tax base that does not allow obtaining a reliable estimation.

## **Compulsory Social Security Contributions to Schemes Operated within the Government Sector**

### **Employees' contributions**

Social security contributions are divided as follows:

For sickness and maternity insurance, 0.625% of the workers monthly wage, plus 0.40% of the amount in excess of 3 UMAs. For disability and life insurance, 0.625% of the monthly wage.

In 2024, a ceiling of 25 UMAs applies to the salary that is used to calculate the social security contributions.

### **Employers' contributions**

- For sickness and maternity 20.40% of the UMA, plus 1.10% of the amount in excess of 3 UMAs, plus 1.75% of the monthly wage.
- For disability and life insurance, 1.75% of worker's monthly wage.
- For social services and nursery, 1% of worker's monthly wage.
- For insurance for work injuries of employees, 1.978% of worker's monthly wage.<sup>3</sup>

In 2024, a ceiling of 25 UMAs applies to the salary that is used to calculate the social security contributions.

## Universal Cash Transfers

### *Transfers related to marital status*

None.

### *Transfers for dependent children*

None.

## Main Changes in the Tax/Benefit System since 1995

The Social Security Law enacted in July 1997 changed fundamentally the financing of non-government employees' social security, which shifted from a pay-as-you-go scheme to funded individual accounts. The government does not manage these accounts; new private financial institutions were created specifically for this purpose. However, the contractual obligation is between the workers and the government, not with the private administrator of the funds, because legally they are still considered as contributions to social security, independently of who manages the funds. It should be noted that the federal government also contributes to each pension account and guarantees a minimum pension to every beneficiary of the social security system, independently of the administration of the funds as well.

### *Changes to labour taxation due to the COVID pandemic in 2020 and 2021*

#### Federal Government.

- The Tax Administration Service extended the deadline for filing the individual 2020 annual tax return until May 31st, 2021 (originally April 30).
- The Tax Administration Service extended the deadline for filing the individual 2019 annual tax return until June 30, 2020 (originally April 30).

#### Examples of tax measures at Subnational Governments.

- Waiver of the Payroll Tax corresponding to the month of January 2021 for taxpayers of sectors affected by the pandemic in the historic downtown area of Mexico City & for all the restaurants in Mexico City.
- The Mexico City Government suspended tax inspection acts from December 17th, 2020, to January 6th, 2021.
- The City Government also announced the deferral of tax returns and payments obligations included in the Mexico City Tax Code, extending the deadline to the end of the month. Tax inspection acts were suspended from March 23rd to May 29th.
- Individuals and companies were exempted of surcharges, fines and other expenses generated during the first three bimesters of 2020 for non-compliance with the payment of the property tax. Additionally, a 5% discount was granted on the payment of this tax for the fourth bimester, as well as for advance payments of the tax corresponding to the fifth and sixth bimesters.
- The State of Mexico also granted a 50% discount for the payment of payroll tax for companies with up to 50 employees for April and May.
- The Government of the State of Sonora announced for March and April a 50% discount for the payment of payroll tax for companies with up to 50 employees. The measures were extended until June.

## Memorandum Items

### ***Method used to identify an average worker and to calculate his gross earnings.***

The income data refer to average workers. It should be noted that in the sample used for this survey, medium and large size firms are over-represented. In Mexico, there are no state or local government income taxes. Information on non-standard tax reliefs is not available.

Figures for 1999 and subsequent years cannot be compared with preliminary figures from previous editions of this publication for two reasons: first, the wage level of the average worker is now based on observed data instead of being estimated; second, social security contributions taken into account no longer include contributions made by employers and employees to privately managed individual accounts. Contributions no longer included in the calculation of social security contributions are specified in the table below.

### ***Main employees' and employers' contributions to private pension, health, etc. schemes***

	Account	% of workers' monthly wage
Employers' contributions	Retirement	2.00
	Discharge and old age insurance	As a result of an amendments of the Social Security Law and Retirement Savings Systems Law that entered into force in 2021, which consider a gradual increase to the employer's discharge and old age insurance rate from 2023 until 2030. The contribution will be increased according to the table below
	Housing Fund (INFONAVIT)	5.00
Employees' contributions	Discharge and old age insurance	1.125

Contribution rates to private pension, health, etc. for employees and employers from 2024 onwards.

Worker's base salary	2023	2024	2025	2026	2027	2028	2029	2030
1.00 Minimum wage (Mw)	3.150%	3.150%	3.150%	3.150%	3.150%	3.150%	3.150%	3.150%
1.01 Mw to 1.50 Unit of Measure and Update (UMA)	3.281%	3.413%	3.544%	3.676%	3.807%	3.939%	4.070%	4.202%
1.51 to 2.00 UMA	3.575%	4.000%	4.426%	4.851%	5.276%	5.701%	6.126%	6.552%
2.01 to 2.50 UMA	3.751%	4.353%	4.954%	5.556%	6.157%	6.759%	7.360%	7.962%
2.51 to 3.00 UMA	3.869%	4.588%	5.307%	6.026%	6.745%	7.464%	8.183%	8.902%
3.01 to 3.50 UMA	3.953%	4.756%	5.559%	6.361%	7.164%	7.967%	8.770%	9.573%

4.01 to 4.50 UMA	4.241%	5.331%	6.422%	7.513%	8.603%	9.694%	10.784%	11.875%

In 2023, the employer contributions came into force for the financing of discharge and old age insurance, which are defined based on the table contained in Article 168 of the Social Security Law, in which, some intervals are defined in multiples of the minimum wage and others in Unit of Measure and Update (UMAs). Due to the minimum wage is used in the first two intervals, a discontinuity is generated with respect to the following intervals, owing to the fact that the value of the UMA is less than the minimum wage. In this regard, the Second Chamber of the Supreme Court of Justice of the Nation confirmed the constitutionality of the current Social Security Law in relation to quotas and contributions for the employer's discharge and old age insurance, establishing that the option that is most favorable for workers should be applied.

## 2024 Parameter values

Average earnings/yr	Ave_earn	199 946 714	Secretariat estimate	
Unit of Measure and Update	UMA	108.57		
Income tax	tax_table	0.00	0	0.0192

## 2024 Tax equations

The equations for the Mexican system in 2024 are on an individual basis.

The functions which are used in the equations (Taper, MIN, Tax etc) are described in the technical note about tax equations. Variable names are defined in the table of parameters above, within the equations table, or are the standard variables “married” and “children”. A reference to a variable with the affix “\_total” indicates the sum of the relevant variable values for the principal and spouse. And the affixes “\_princ” and “\_spouse” indicate the value for the principal and spouse, respectively. Equations for a single person are as shown for the principal, with “\_spouse” values taken as 0.

	Line in country table and intermediate steps	Variable name	Range	Equation
1.	Earnings	earn		
2.	Allowances	tax_al	B	$\text{MIN}(\text{earn}, \text{MIN}(\text{earn} \times (12/365) \times 0.25, \text{UMA} \times 15) + \text{MIN}(\text{earn} \times (15/365), \text{UMA} \times 30))$
3.	Credits in taxable income	taxbl_cr	B	0
4.	CG taxable income	tax_inc	B	$\text{Positive}(\text{earn} - \text{tax\_al})$
5.	CG tax before credits	CG_tax_excl	B	$\text{Tax}(\text{tax\_inc}, \text{Tax\_sch})$
6.	Tax credits	tax_cr	B	$1/3 \times \text{VLOOKUP}(\text{tax\_inc}, \text{Basic\_crd}, 2) + 2/3 \times \text{IF}(\text{tax\_inc} < \text{max\_inc\_tc}, \text{Basic\_crd}24, 0)$
7.	CG tax	CG_tax	B	$\text{CG\_tax\_excl} - \text{tax\_cr}$
8.	State and local taxes	local_tax	B	0
9.	Employees' soc security	SSC	B	$\text{MIN}(\text{earn} \times \text{ssc\_rate}, \text{UMA} \times 25 \times 30.4 \times 12 \times \text{ssc\_rate}) + \text{MIN}(\text{Positive}(\text{earn} - (3 \times 30.4 \times 12 \times \text{UMA})) \times \text{ssc\_rate\_sur}, \text{UMA} \times (25 - 3) \times 30.4 \times 12 \times \text{ssc\_rate\_sur})$
11.	Cash transfers	cash_trans	B	0
13.	Employer's soc security	SSC_empr	B	$\text{MIN}(\text{earn} \times \text{ssc\_empr}, \text{UMA} \times 25 \times 30.4 \times 12 \times \text{ssc\_empr}) + 30.4 \times 12 \times \text{UMA} \times \text{ssc\_empr\_min} + \text{MIN}(\text{Positive}(\text{earn} - (3 \times 30.4 \times 12 \times \text{UMA})) \times \text{ssc\_empr\_sur}, \text{UMA} \times (25 - 3) \times 30.4 \times 12 \times \text{ssc\_empr\_sur})$
	Memorandum item: Non-wastable tax credit			
	tax expenditure component	taxexp	B	$\text{tax\_cr} - \text{transfer}$
	cash transfer component	transfer	B	$\text{IF}(\text{CG\_tax} < 0, -\text{CG\_tax}, 0)$

Key to range of equation B calculated separately for both principal earner and spouse P calculated for principal only (value taken as 0 for spouse calculation).

## Notes

<sup>1</sup> For 2024, the value of the UMA is 108.57, mean while the general minimum wage is 248.93 and 374.89 in the northern border region. The municipalities constituting the northern border region are as follows: Ensenada, Playas de Rosarito, Mexicali, Tecate, Tijuana, San Quintín and San Felipe in the state of Baja California; San Luis Río Colorado, Puerto Peñasco, General Plutarco Elías Calles, Caborca, Altar, Sáric, Nogales, Santa Cruz, Cananea, Naco and Agua Prieta in the state of Sonora; Janos, Ascensión, Juárez, Práxedes G. Guerrero, Guadalupe, Coyame del Sotol, Ojinaga and Manuel Benavides in the state of Chihuahua; Ocampo, Acuña, Zaragoza, Jiménez, Piedras Negras, Nava, Guerrero and Hidalgo in the state of Coahuila de Zaragoza; Anáhuac in the state of Nuevo León, and Nuevo Laredo; Guerrero, Mier, Miguel Alemán, Camargo, Gustavo Díaz Ordaz, Reynosa, Río Bravo, Valle Hermoso and Matamoros in the state of Tamaulipas.

<sup>2</sup> The Investment Units (UDIS) is a daily frequency indicator and it is updated taking as reference the fortnightly variations of the National Consumer Price Index (INPC). The average value of the UDIS from January to April of 2024 was MXN 8.0870.

<sup>3</sup> The amount of the work injury fee depends on the risk level in which the company is classified. The Mexican Institute of Social Security provided a weighted average rate that considers the economic activities from C to K of the International Standard Classification.

# Netherlands

---

This chapter includes data on the income taxes paid by workers, their social security contributions, the family benefits they receive in the form of cash transfers as well as the social security contributions and payroll taxes paid by their employers. Results reported include the marginal and average tax burden for eight different family types.

Methodological information is available for personal income tax systems, compulsory social security contributions to schemes operated within the government sector, universal cash transfers as well as recent changes in the tax/benefit system. The methodology also includes the parameter values and tax equations underlying the data.

The national currency is the Euro (EUR). In 2024, EUR 0.92 was equal to USD 1. In that year, the average worker earned EUR 65 782 (Secretariat estimate).<sup>1</sup>

## Personal Income Tax System (Central Government)

### **Central government income tax**

There are three categories ('boxes') of taxable income:

- Taxable income from work and owner-occupied housing.
- Taxable income from a substantial interest in a limited liability company.
- Taxable income from savings and investments.

This description is limited to the most relevant aspects of taxable income from the first category, 'taxable income from work and owner-occupied housing', because of its relevance for the AW.

#### *Tax unit*

Husbands and wives are taxed separately on their personal income, which includes income from business, profession and employment, pensions and social security benefits. Certain parts of income may be freely split between husbands and wives, such as the net-income from owner occupied housing and the income from savings and investments.

#### *Tax allowances*

##### **Standard allowances**

##### **Non-standard allowances applicable to AW**

Related to wage earnings:

- For distances of more than 10 km for a single journey between home and work, fixed amounts for travel expenses with public transportation are deductible. The maximum deduction for employees who travel by public transport is EUR 2 578 for distances of more than 80 km. If the travel expenses are reimbursed or the employer provides transport, there is no deduction; the reimbursement is untaxed (also for employees who travel by car) if it is below certain specified amounts.
- Employee contributions to private (company provided) pension schemes.
- Related to owner occupied housing:
  - Excess of mortgage interest over net imputed rent.
- Related to personal circumstances:
  - Medical expenses and other exceptional expenses: Fiscal deduction of exceptional health expenses is reduced to the specific costs as a result of a chronic illness. As specific costs are seen medical treatment (not paid for by insurance company), diet costs, special medicine described by a doctor, extra domestic care, special expenses for clothing and transportation costs. Visual tools and insurance premiums are not seen as specific costs and are therefore not deductible. Expenses for wheelchairs, scooters for the disabled and home adjustments made because of a chronic illness are not deductible.
  - All expenses except for medical treatment expenses may be increased by a factor. This factor is income and age dependent. The factor amounts to 1.4 if the person is below the legal pension age and has an income on or below EUR 40 021. The factor amounts to 2.13 if the

person is on or above the legal pension age and has an income on or below EUR 40 021. People with an income above EUR 40 021 cannot apply the factor.

- For a single person: the specific expenses (after multiplication with the factor) in excess of 1.65% of income are deductible if income exceeds EUR 9 420 and is below EUR 50 034. If income is lower than or equal to EUR 9 420, the non-deductible limit is EUR 163. For a person with a partner: the joint income is used to determine the non-deductible amounts and the non-deductible limit is EUR 326.
- If income exceeds EUR 50 034 the specific expenses in excess of 1.65% of EUR 50 034 increased with 5.75% of income above EUR 50 034 are deductible.
- Donations to certain institutions (charity) that serve the public good are deductible if in excess of 1% of the income and in excess of EUR 60. No more than 10% of the income may be deducted in this way. For periodic donations the threshold of EUR 60 does not apply. A maximum of EUR 250 000 in periodic gifts may be deducted each year.

### *Tax schedule*

The tax schedule for income from work and owner-occupied housing is as follows:

Taxable Income (EUR)	Tax Rate (%)	Social security contributions	
		< 66 years and 10 months	> 66 years and 10 months
0–38 097	9.32	27.65	9.75
38 098–75 517	36.97	-	-
75 518 and over	49.50	-	-

The contributions for the general social security schemes are levied on income from work and owner-occupied housing in the first- and second-income tax bracket. These social security contributions are not deductible for income tax purposes. Individuals above the pension age pay 9.75% (for widows and orphans pensions, and exceptional medical expenses). Individuals below the pension age pay 27.65%, (for widows and orphans pensions, exceptional medical expenses, and old age income provision). For further information see Section on Employees' contributions.

### *Tax credits*

#### **Standard tax credits**

The tax credits are deducted partly from the income tax liability and partly from the contributions that are made to the general social security schemes (see Tax schedule Section). For most families, the share of the credit attributed to tax is related to the ratio of the tax rate to the sum of the tax rate and the social security contributions rate in the first bracket of the tax schedule. In 2024, this ratio was 25.21% (= 9.32% / (9.32% + 27.65%)), implying that 25.21% of the (tax) credit is attributed to the personal income tax and the remaining 74.79% to social security contributions.

Division of credits for tax and social security contributions is essential in the OECD publications. In the Netherlands no division is made in the general tax scheme between tax and SSC.

Note that the tax/benefit position tables show the total amount of social security contributions net of the credits that are claimed.

- **General tax credit:** The general tax credit is dependent on income since 2014, meaning that higher incomes receive less general tax credit. Since 2016, the general tax credit is fully phased out, meaning that higher incomes receive no general tax credit. In 2024, the maximum of the general tax credit is EUR 3 362 when no reduction is applicable (people who are on or above the legal

pension age receive less general tax credit, because they do not pay social contributions for the state pension) and taxable income is below or equal to EUR 24 812. For incomes above this threshold, the general tax credit is fully phased out at a rate of 6.630% (per euro). So, incomes above EUR 75 518 receive no general tax credit.

- **Work credit:** The amount of work credit depends on taxable income from work and is phased in on three trajectories; the first one runs from EUR 0 to EUR 11 491. On this first trajectory, work credit equals 8.425% of taxable income from work. On the second trajectory, which runs from EUR 11 491 to EUR 24 821, the work credit equals EUR 968 plus 31.433% of the part of income that is above EUR 11 490. On the third trajectory, which runs from EUR 24 821 to EUR 39 958, the work credit equals EUR 5 158 plus 2.471% of the part of income that is above EUR 24 820. So, at an income of EUR 39 958, the maximum of EUR 5 532 is reached. Above this income of EUR 39 958, the work credit is fully phased out at a rate of 6.510% (per euro) so that incomes above EUR 124 935 receive no work credit.
- **Income dependant combination credit:** A taxpayer who is either a single parent and working or the working partner with the lowest income, and who has children below the age of 12 and has his/her taxable income from work exceeding EUR 6 074, is entitled to an income dependent combination credit of 11.45% of taxable income from work above EUR 6 074. The maximum total combination credit is EUR 2 950 and reached at an income level of EUR 31 838.
- **Single parent credit:** abolished since 2015.
- **Additional single parent credit:** abolished since 2015.
- **Elderly tax credit:** individuals above the pension age receive a tax credit of EUR 2 010 if their income is below EUR 44 771. This tax credit is gradually phased out to 0 at a rate of 15.0% for incomes from EUR 44 771. Individuals above the pension age who do not have a partner receive an additional tax credit of EUR 524 that is not income dependent.

The amount of the tax credit is limited to the amount of tax and premiums payable (non-refundable tax credit). Before 2023, if a taxpayer with insufficient income to fully exploit his/her tax credit had a partner with a surplus of tax and premiums payable over his/her own tax credit, the tax credit of the former taxpayer is increased by (at most) the surplus tax and premiums payable by his/her fiscal partner. Consequently, the tax credit of the former taxpayer will exceed tax and premiums payable, resulting in a payout of the residual tax credit to the taxpayer by the tax authority. This regulation has gradually been phased out since 2009. As of 2023 the payout of the residual tax credit has ended for households where the partner with the lowest income is born after 1962. Only partners with the lowest income born before 1963 are still eligible for a payout of the general tax credit with a maximum of EUR 3 362 in 2024.

### **State and local income taxes**

None.

## **Compulsory Social Security Contributions to Schemes Operated Within the Government Sector**

### **Employees' contributions**

General schemes (for everyone earning income from (former) employment)

- **Old age pension:** The age is adjusted such that elderly will receive Old Age (state) pension at the age of 67 years old in 2024 and 2025. The Old age premium percentage is 17.9% of taxable income in the first tax bracket. This scheme does not apply to individuals above the current pension age.

- Widows and orphans pension: 0.10% of taxable income in the first tax bracket.
- Long-term care: 9.65% of taxable income in the first tax bracket.

#### Schemes for employees:

- Unemployment: employees do not have to pay an unemployment premium in order to reduce administration costs. Employers pay both an unemployment premium and a premium for invalidity for their employees (see par.2.2).
- For basic health insurance each adult pays an average amount of EUR 1 752 a year to a self-chosen private health insurance company. This premium is a non-tax compulsory payment, and it is not included in the Taxing Wages calculations but only in the NTCP calculations. The basic health insurance includes a mandatory deductible of EUR 385, which is not included in the premium mentioned above.
- Employees might obtain compensation for the nominal contribution of on average EUR 1 752 for the basic health insurance, depending on the household's personal situation and taxable income. This is called the health care benefit. This benefit is included in the NTCP calculations as it compensates for the basic health insurance premium of on average EUR 1 752 (see [https://www.oecd.org/en/publications/taxing-wages\\_20725124.html](https://www.oecd.org/en/publications/taxing-wages_20725124.html) for more details on non-tax compulsory payments as well as the Special Feature in the 2009 edition of the *Taxing Wages* Report). The care benefit is calculated as follows:
  - Single parent households:  $1987 - 1.879\% * 26\,819 - 13.67\% * (\text{taxable income} - 26\,819)$
  - Married couples:  $\text{number of adults} * 1987 - 4.256\% * 26\,819 - 13.67\% * (\text{taxable income principal and spouse} - 26\,819)$ .

### ***Employers' contributions***

#### Schemes for employers:

- Unemployment: on average 3.89% of gross earnings below EUR 71 628 for the general unemployment fund. The actual premium depends on the type of contract: for fixed contracts, the low premium of 2,64% applies. For other (temporary) contracts, the high premium of 7,64% applies.
- Invalidity: 9.01% of gross earnings below EUR 71 628.
- For medical care employers contribute 6.57% of gross earnings net of employees' pension premiums and unemployment social security contributions until a maximum of gross earnings of EUR 71 628. This contribution is modelled as a NTCP from the employer to the Health Care Fund. The spending of this fund mainly compensates private insurance companies for their (public) obligation to insure individuals with a high health risk.

## **Universal Cash Transfers**

### ***Transfers related to marital status***

None.

### ***Transfers for dependent children***

Families with children receive a tax-free benefit, depending on the number and age of the children. For a family with two children in the age group of 6 to 12 years, the total benefit amounts to EUR 2 730 a year.

An additional income dependent child benefit exists (kindgebonden budget). This benefit also depends on the number of children per family. A family can only claim the extra child benefit when it has children under

the age of 18 years old for whom it also receives the tax free and income independent child benefit. The maximum value is EUR 2 436 per year for families with one child in 2024. The maximum value is EUR 4 872 a year for families with two children. The benefit is reduced at a rate of 6.75% per euro when the family's yearly taxable income exceeds a threshold. Since 2020 this threshold is different for single parents and couples. For single parents the threshold equals EUR 26 819, for couples it equals EUR 35 849. As from 2015 an extra benefit for single parents is introduced (independent of the number of children and the age of the children) which amounts to EUR 3 480 in 2024. This amount is also phased out at a rate of 6.75% from the threshold. Therefore, this total benefit is completely phased out for families with two children when the taxable income exceeds EUR 150 552 for single parents and EUR 108 027 for couples.

## Main Changes in the Tax/Benefit Systems Since 2000

In 2001, the tax system was changed thoroughly. The tax rates have been lowered; the basic allowance and its supplements have been transformed into tax credits. The deduction for labour costs has also been replaced by a tax credit. Certain other deductions have been reduced or abolished. Extra tax credits for households with children were introduced.

In 2002 and 2003 the tax system was only slightly changed. The additional combination credit was introduced in 2004. The various child credits were integrated and streamlined in 2006.

Public insurance for medical care has been reformed in 2006. A new standard health insurance system was introduced. Until 2005, no public health insurance contributions were levied on income in excess of EUR 33 000. However, taxpayers earning more than EUR 33 000 were obliged to take a private insurance. These private health insurance contributions were not included in the Taxing Wages calculations because they were made to a privately managed fund (and are therefore not taxes). Since 2006, every individual contributes a nominal contribution to a privately managed fund (on average EUR 1 064, depending on the competition between insurance companies, a year in 2009) and, in addition for employees, a percentage of gross income (6.9%) net of employees' pension premiums and unemployment social security contributions until a maximum of gross income of EUR 32 369 (in 2009). For this last contribution, the employee receives mandatory compensation of his employer for the same amount. The premium itself, however, is not modelled (either as an employee or employer SSC) in Taxing Wages. Instead, it is modelled as a non-tax compulsory payment from the employer to a public-managed health insurance fund. The spending of this fund mainly compensates private insurance companies for their (public) obligation to insure individuals with a high health risk. Taxpayers might obtain compensation for the nominal contribution to the private insurance company of on average EUR 1 064 in 2009, depending on the households personal situation and taxable income. This is called the health care benefit and is part of the NTCP (see Section on employees' contributions).

In 2007, the tax system has not been changed, except for some parameter updates. In 2008, the child credit has been replaced by an extra child benefit.

In 2009, the general tax credit will be reduced for non-working spouses in order to cut down the capitalization of this tax credit in 2024. A non-working spouse can in 2024 capitalise the general tax credit only against his/her own earned income. In 2009 the employment credit is extended for income exceeding EUR 42 509. This credit will be reduced by maximum EUR 24, whereas the employment credit is increased for lower incomes. The income dependant combination credit is introduced in order to promote the labour participation of single parents or partners of married workers. The income-dependent combination credit has been increased considerably. The extra child benefit depends on the total income of the family and the number of children per family. The income-dependent child benefit is higher when more children under the age of 18 years are member of the family. As from 2009 onwards, employees do not have to pay an unemployment premium mainly to reduce administration costs for employers. Employers pay now both an unemployment premium and a premium for invalidity for their employees (see also par. 2.2).

In 2013, the income base for SSC and Income-Tax is harmonised. Standardising or harmonisation of the income tax base for levying SSC and Taxes is introduced in 2013 and is called the Law “WUL” i.e., Harmonising the income base for SSC and Taxes (see publication CPB the Netherlands). So, the income tax base is since 2013 exclusive the income dependant health care contribution and employees will no longer have to pay taxes over income dependant health care contributions, instead they pay a higher tax rate in the first tax bracket and mainly Work credit is adjusted. The tax rate in the first tax bracket has been increased from 1.95% to 5.85% and the Work credit is reduced for employees with a higher income such that the effect of this harmonisation is budgetary neutral.

The main adjustment in 2014 is the General tax credit which is made income dependent. Higher income will receive less general credit and the reduction is 2% per euro of income between EURO 56 495 and EURO 19 645 per year. See also par 1.141.

In 2015, the child arrangements are reduced from 10 items to 4 items. For that reason, Single parent credits have stopped. Cash transfers for parents with children and low-income increase. And for single parents with children an extra cash benefit of EUR 3 050 is introduced to compensate the loss of single parent credits.

Not all child arrangements are part of the TW model because these are quite specific arrangements for disabled children and parents with low income with children.

Long term health care is modernised. The SSC rate for (AWBZ Dutch) reduced with 3% to 9.65% of taxable income. The tax rates in the first two brackets are raised with 3% because social spending is still used but now for other general social purposes.

In 2016, as part of a EUR 5 billion package of tax reductions on work, the general tax credit and the work credit were phased out fully, meaning that higher incomes no longer receive the general tax credit and the work credit.

Multiple tax credits were increased and made more income dependent in 2019. The working credit is increased but phased out at a faster rate of 6% (instead of 3.6%). The combination credit starts at EUR 0 instead of EUR 1 052 but increases with 11.45% instead of 6.159%. The elderly tax credit has been increased and is now gradually phased out at a rate of 15%, instead of a sudden drop of more than EUR 1 300 above a threshold income. Also, a first step has been made to unify the tax rates in the first three brackets.

In 2020, the number of tax brackets has been reduced from four to three. For people below the retirement age there are effectively only two different brackets since their combined rate of tax and social security contributions is the same in the first and second bracket. Secondly, a new phase in trajectory has been introduced for the work credit. Thirdly, the threshold after which the income dependent child benefit is phased out is now higher for couples than for single parents.

### ***Changes to labour taxation due to the COVID pandemic in 2020 and 2021***

The covid-19 pandemic has not led to changes in labour taxation for employees. Employers and self-employed do have the option to postpone payment of labour taxes. Also, some of the requirements for self-employed to qualify for certain deductibles (e.g., a minimum number of hours to qualify for a self-employed deduction) have been temporarily loosened.

## Memorandum Items

### ***Identification of the AW and calculation of the AW's gross earnings***

The calculation of the annual gross earnings of an AW is based upon data on gross earnings of full-time workers in industry C-K. These data have been obtained through a yearly sample survey carried out by the Central Bureau of Statistics. Included in the AW annual salary are irregular payments, such as holiday allowances, loyalty payments and bonuses. Payments for working overtime are not included. However, the CBS has stopped carrying out the 'employment and wages' survey in July 2006 due to new legislation. On Inquiry at the Central Bureau of Statistics (CBS) the information from the wage declarations by employers, delivered nowadays at the tax department, will be implemented by the CBS for the new survey about employment and wages. These changes produced a delay in delivery of the information on wages and employment for 2006.

On the base of new information on wages per industry sector, the AW is delivered to EUROSTAT in November 2009 by the CBS for years 2006 and 2007. The standard classification NACE Rev. 1 for industrial sectors C-K is used.

The new classification NACE Revision 2 (sectors B-N) will be applicable as from 2008 onwards. The estimation of the AW for 2008 according to the new classification is applicable at the beginning of May 2010. The AW for 2009 is available since November 2010. For 2008 the average annual gross earnings (full-time NACE REV 2) comes to EUR 43 146, for 2009 EUR 44 412, and EUR 45 215 in 2010. The latest information according to Eurostat is an AW in 2011 of EUR 46 287 (NACE Rev 2).

No new data is found on EU site

[http://epp.eurostat.ec.europa.eu/portal/page/portal/statistics/search\\_database](http://epp.eurostat.ec.europa.eu/portal/page/portal/statistics/search_database).

The average wages from 2012 onwards include the private and the public sectors, since values on the private sectors only (sectors B to N) are not available. The values were provided by Statistics Netherlands.

### ***Main employers' contributions to private pension, health and related schemes***

In addition to the obligatory contributions of employees to private insurance companies, all employers pay contributions to a public-managed health fund. More information is included in the Special Feature where the contributions to the public-managed health funds are also presented.

Employers have to pay at least 70% of the gross wage of their sick employees for two years. Many employers have insured themselves privately for the risks of their employees being sick. This insurance for illness of their employees is not compulsory.

## 2024 Tax equations

The equations for the tax system in the Netherlands in 2022 are repeated for each individual of a married couple. Tax credits, except a part of the general credit of the spouse, depend also on the tax paid by the principal if the spouse's income is zero or very low, and the cash transfers are calculated only once. The functions which are used in the equations (Taper, MIN, Tax etc) are described in the technical note on the tax equations. Due to adjustments of the work credit in 2016 and 2020, the function `Emp_credit(Value)` was altered in those years. Variable names are defined in the table of parameters above, within the equations table, or are the standard variables “married” and “children”. A reference to a variable with the affix “\_total” indicates the sum of the relevant variable values for the principal and spouse. And the affix “\_spouse” indicates the value for the spouse. No affix is used for the principal values. Equations for a single person are as shown for the principal, with “\_spouse” values taken as 0.

	Line in country table and intermediate steps	Variable name	Range	Equation
1.	Earnings (gross)	gr_earn

13.	Employer's soc security	SSC_empr	B	SSC_f(earn-(positive(earn- NTCP_franchise*MIN(earn/min_wage,1))*NTCP_pension_ee),Unemp_empr1,SSC_ceil,Unemp_unempr_franchise1)+SSC_f(earn-(positive(earn- NTCP_franchise*MIN(earn/min_wage,1))*NTCP_pension_ee),Unemp_empr2,SSC_ceil,Unemp_unempr_franchise2)+SSC_f(earn-(positive(earn- NTCP_franchise*MIN(earn/min_wage,1))*NTCP_pension_ee),Inv_empr_rate,SSC_ceil,Inv_empr_franchise)
				Function Emp_credit(Value) If Value <= 0 Then Emp_credit = 0 Elseif Value <= Range("Emp_credit1_thr").Value Then Emp_credit = (Value / Range("Emp_credit1_thr").Value) * Range("Emp_credit1").Value Elseif Value <= Range("Emp_credit2_thr").Value Then Emp_credit = Range("Emp_credit1").Value + ((Value - Range("Emp_credit1_thr").Value) / (Range("Emp_credit2_thr").Value - Range("Emp_credit1_thr").Value)) * Range("Emp_credit2").Value Elseif Value <= Range("Emp_credit3_thr").Value Then Emp_credit = Range("Emp_credit1").Value + Range("Emp_credit2").Value + ((Value - Range("Emp_credit2_thr").Value) / (Range("Emp_credit3_thr").Value - Range("Emp_credit2_thr").Value)) * Range("Emp_credit3").Value Elseif Value <= Range("Emp_credit4_thr").Value Then Emp_credit = Range("Emp_credit1").Value + Range("Emp_credit2").Value + Range("Emp_credit3").Value - ((Value - Range("Emp_credit3_thr").Value) / (Range("Emp_credit4_thr").Value - Range("Emp_credit3_thr").Value)) * (Range("Emp_credit1").Value + Range("Emp_credit2").Value + Range("Emp_credit3").Value - Range("Emp_credit4").Value) Else Emp_credit = 0 End If End Function

Key to range of equations B calculated separately for both principal earner and spouse P calculated for principal only (value taken as 0 for spouse calculation) J calculated once only on a joint basis.

## Note

<sup>1</sup> The Dutch labour market is characterized by a substantial share of part-time employees. As explained in the methodological section of this volume, the average wage measure used in the tax burden calculations refer to full-time employees only. If the wages of part-timers were taken into account, the average wage would be substantially lower.

# New Zealand

## (2024-2025 Income tax year)

---

This chapter includes data on the income taxes paid by workers, their social security contributions, the family benefits they receive in the form of cash transfers as well as the social security contributions and payroll taxes paid by their employers. Results reported include the marginal and average tax burden for eight different family types.

Methodological information is available for personal income tax systems, compulsory social security contributions to schemes operated within the government sector, universal cash transfers as well as recent changes in the tax/benefit system. The methodology also includes the parameter values and tax equations underlying the data.

The national currency is the New Zealand dollar (NZD). In the year to March 2024, NZD 1.65 was equal to USD 1 on average. The average worker earned NZD 80 019 (Country estimate<sup>1</sup>).

## Personal Income Tax System

In New Zealand, the tax year starts April 1<sup>st</sup> and ends March 31<sup>st</sup>.

### Central/federal government income taxes

#### *Tax unit*

Members of the family are taxed separately.

#### *Tax allowances and tax credits*

#### **Standard reliefs**

Refer to the section on Universal cash transfers.

#### **Main non-standard tax reliefs applicable to an average wage**

Refer to the section on Universal cash transfers.

#### *Schedule*

Rates of income tax for individuals from 1 April 2024 to 30 July 2024:

- On so much of the income as does not exceed NZD 14 000: 10.5%.
- On so much of the income as exceeds NZD 14 000 but does not exceed NZD 48 000: 17.5%.
- On so much of the income as exceeds NZD 48 000 but does not exceed NZD 70 000: 30%.
- On so much of the income as exceeds NZD 70 000 but does not exceed NZD 180 000: 33%.
- On so much of the income as exceeds NZD 180 000: 39%.

Rates of income tax for individuals from 31 July 2024 to 31 March 2025:

- On so much of the income as does not exceed NZD 15 600: 10.5%.
- On so much of the income as exceeds NZD 15 600 but does not exceed NZD 53 500: 17.5%.
- On so much of the income as exceeds NZD 53 500 but does not exceed NZD 78 100: 30%.
- On so much of the income as exceeds NZD 78 100 but does not exceed NZD 180 000: 33%.
- On so much of the income as exceeds NZD 180 000: 39%.

### State and local income taxes

New Zealand has no state or local income tax.

## Compulsory Social Security Contributions to Schemes Operated Within the Government Sector

New Zealand has no compulsory social security contributions to schemes operated within the Government sector.

It should be noted that there is an accident compensation scheme administered by the Accident Compensation Corporation for residents and temporary visitors to New Zealand. This scheme is funded in part by premiums paid by employees and employers. For employees, the premium will increase for 2024/25 to represent 1.39% of their gross earnings from 1.33% for gross earnings for 2023/24. For employers and the self-employed, the premiums are based on a percentage of the total payroll and the applicable rate varies depending upon the associated accident risk (the average rate is 0.63% for 2024/24). This scheme is not considered as a compulsory social security contribution for the purposes of the Report.

## Universal Cash Transfers

The main entitlements in New Zealand are targeted at families under the blanket title 'Working for Families' ('WFF'). There are four main payments that constitute WFF, which are described in 3.2 – 3.5 below. The Independent Earner Tax Credit (IETC) is another form of support that is separate from WFF and is described in 3.6 below.

### ***Amount for marriage***

None.

### ***Best Start Tax Credit***

The Best Start Tax Credit ("BSTC") is a payment made to families with a new-born baby. From 1 April 2024, the BSTC payment increased to NZD 73 per week (3 838 per year) for the first year of the child's life. There is no income limit for receiving the BSTC payment in the first year of the child's life. The BSTC continues to provide NZD 3 838 per year for the second and third year of a child's life, but this abates at 21.00 cents in the dollar for every dollar by which a family's income exceeds the abatement threshold of NZD 79 000. For families receiving paid parental leave, the BSTC payment begins after paid parental leave ends.

### ***Family Tax Credit***

The Family Tax Credit (FTC) is available to families with dependent children regardless of whether they receive a main benefit. FTC pays an amount for a family's eldest child, and a lesser amount for each subsequent child. From 1 April 2024, the eldest child rate increased to NZD 7 524 per year and the subsequent child rate increased to NZD 6 130. The total credit is abated by 27.00 cents on each dollar earned over NZD 42 700. The abatement is based on the combined family income.

### ***In Work Tax Credit***

The In Work Tax Credit (IWTC) is available to families with dependent children who have some income from paid employment each week, and who are not receiving an income-tested benefit or student allowance. IWTC provides NZD 3 770 per family per year (or NZD 72.50 a week) for up to three children, plus an additional NZD 780 per year (or NZD 15 a week) for fourth and subsequent children. It uses the same abatement regime used with the FTC, although it does not begin to abate until the FTC entitlement has been abated to zero.

From 31 July 2024, the IWTC amount for up to three children will increase to NZD 5 070 per family per year (NZD 97.50 a week). The rate for fourth and subsequent children will not change.

From 1 April 2021, the IWTC is available for up to two weeks when taking an unpaid break from work. This is intended to provide support for those transitioning between jobs or who are unpaid for a period.

### ***Minimum Family Tax Credit***

The Minimum Family Tax Credit (“MFTC”) effectively guarantees a minimum after-tax income for all full-time working families with dependent children and is intended to ensure that working families are better off in work than they would be if they were on a benefit. For the purposes of MFTC, “full-time” employment is defined as 20 hours or more per week for a sole parent, and 30 hours or more per week combined for a two-parent family.

The MFTC threshold (the level to which after-tax income is topped up to) rose from NZD 34 216 per year to NZD 35 204 on 1 April 2024.

From 31 July 2024, the MFTC threshold will increase to \$35 316 per year.

### ***Independent Earner Tax Credit***

The Independent Earner Tax Credit (IETC) of up to NZD 520 per year is available to individuals who do not receive other forms of support such as WFF tax credits or benefits, and who have an annual income between NZD 24 000 and NZD 48 000. The IETC abates at a rate of 13 cents on each dollar earned over NZD 44 000. Unlike WFF tax credits, the IETC is calculated on the recipient’s individual income rather than family income and does not require the recipient to have dependent children.

From 31 July 2024, the abatement threshold for the IETC will increase from NZD 44 000 to NZD 66 000. The credit will therefore be available for those with annual income between NZD 24 000 and NZD 70 000.

## **Main Changes in Personal Tax/Benefit Systems since 2023/24**

### ***Changes to the tax/benefit system announced in Budget 2024***

A number of changes to the personal income tax and transfer system were announced as part of Budget 2024 on 30 May. These changes will take effect from 31 July 2024.

- a. Increasing the personal income tax thresholds,
- b. Increasing the abatement threshold of the Independent Earner Tax Credit,
- c. Increasing the In-Work Tax Credit and the Minimum Family Tax Credit.

Budget 2024 also introduced a new tax credit named FamilyBoost, taking effect from 1 July 2024. This is a rebate provided to families for the cost of early childhood education (ECE). For families with income up to NZD 140 000 per annum, 25 per cent of ECE fees are refunded up to a maximum of NZD 75 per week. For families with income above NZD 140 000 the maximum refund abates at a rate of 9.75 cents on each dollar, abating to zero at NZD 180 000.

The FamilyBoost tax credit has not been added to the Taxing Wages model as it only applies to families with ECE costs. It is estimated that around 4% of all households will benefit from FamilyBoost.

## **Memorandum Items**

### ***Method used to identify AW and to calculate the AW’s gross earnings***

The Annual Earnings figure is derived from the Quarterly Employment Survey (QES) for those employees in the B-N industry groups based on the ISIC Rev.4 definition. The annual earnings figure for the average worker is the sum of the four quarterly earnings figures, with each quarterly figure calculated by taking the average total weekly earnings and multiplying it by 13 weeks per quarter. In 2021 the QES was redesigned,

which means that the average wage data for 2021 may not be directly comparable to previous years.<sup>2</sup> In 2022 the ISIC version 4 replaced the version 3 concordance, which has changed average annual earnings estimates for previous years and limits comparability.

***Employer's contributions to private pension, health schemes, etc.***

No information available.

## 2024 Parameter values

From 1 April 2024 to 30 July 2024

	Ave_earn	80 019	Country estimate
Income tax schedule	Tax_sch	0.105	14 000
		0.175	48 000
		0.3	70 000
		0.33	180 000

	IETC_rate	0.13	

Note: Those with children under 3 years of age receive the Best Start Tax Credit and will therefore have a lower effective tax rate than implied by the model.

## 2024 Tax equations

The equations for the New Zealand system in 2023 are mostly repeated for each individual of a couple. But the cash transfer is calculated only once. This is shown by the Range indicator in the table below. The functions which are used in the equations (Taper, MIN, Tax etc) are described in the technical note about tax equations. Variable names are defined in the table of parameters above, within the equations table, or are the standard variables “married” and “children”. A reference to a variable with the affix “\_total” indicates the sum of the relevant variable values for the principal and spouse. And the affixes “\_princ” and “\_spouse” indicate the value for the principal and spouse, respectively. Equations for a single person are as shown for the principal, with “\_spouse” values taken as 0.

	Line in country table and intermediate steps	Variable name	Range	Equation
1.	Earnings	earn		
2.	Allowances	tax_al	B	0
3.	Credits in taxable income	taxbl_cr	B	0
4.	CG taxable income	tax_inc	B	earn
5.	CG tax before credits	CG_tax_excl	B	Tax(tax_inc, Tax_sch)
6.	Tax credits :			
	Guaranteed minimum income	GMI	J	(Children>0)*Min_inc
	Independent Earner Tax Credit	IETC_rebate	B	AND(Children=0,earn>IETC_thrsh1)*SINGLE(Taper(IETC,earn,44000,IETC_rate))*121/365+AND(Children=0,earn>IETC_thrsh1)*SINGLE(Taper(IETC,AA7,IETC_thrsh2,IETC_rate))*244/365
6.	Tax credits:	tax_cr	B	IETC_rebate
7.	CG tax	CG_tax	B	CG_tax_excl-tax_cr
8.	Local tax	local_tax	B	0
9.	Employees' soc security	SSC	B	0
11.	Cash transfers:			
	Family tax credit (unabated)	fam_tax_cr	J	Fam_sup_eld*(Children>0)+Fam_sup_oth*Positive(Children-1)
	In-work tax credit (unabated)	in_work_tax_cr	J	(Children>0)*(In_work_children123+Positive(Children-3)*In_work_children4plus)
	Tax credits abated	tax_cr_ab	J	Taper(fam_tax_cr+in_work_tax_cr, earn_total, Fam_sup_thrsh1, Fam_sup_rate1)
	Minimum Family tax credit	min_fam_tax_cr	J	Positive(GMI-(earn_total-CG_tax_excl_total))
	Cash transfers	cash_trans	J	tax_cr_ab + min_fam_tax_cr
13.	Employer's soc security	SSC_empr	B	0

Key to range of equation B calculated separately for both principal earner and spouse P calculated for principal only (value taken as 0 for spouse calculation) J calculated once only on a joint basis.

## Notes

<sup>1</sup> In the year to March 2024.

# Norway

---

This chapter includes data on the income taxes paid by workers, their social security contributions, the family benefits they receive in the form of cash transfers as well as the social security contributions and payroll taxes paid by their employers. Results reported include the marginal and average tax burden for eight different family types.

Methodological information is available for personal income tax systems, compulsory social security contributions to schemes operated within the government sector, universal cash transfers as well as recent changes in the tax/benefit system. The methodology also includes the parameter values and tax equations underlying the data.

---

	Total tax wedge: Spouse		32.3%	41.4%	49.9%	41.4%

The national currency is the Kroner (NOK). In 2024, NOK 10.74 were equal to 1 USD. In that year the average worker earned NOK 763 733 (Secretariat estimate).

## Personal Income Tax System

The personal income tax has two tax bases: personal income and ordinary income. Personal income is defined as income from labour and pensions. Personal income is a gross income base from which no deductions are made. Ordinary income includes all types of taxable income from labour, pensions, business and capital. Certain costs and expenses, including interest paid on debt, are deductible in the computation of ordinary income.

### Central government income tax

#### *Tax unit*

The tax unit is in most cases the individual. Children aged below 17 are generally taxed together with their parents, but they may be taxed individually. All other income earners are taxed on an individual basis.

#### *Tax allowances applicable to an AW*

There are no tax allowances applicable to an AW under the central government income bracket tax. The tax base is personal income from which no deductions are allowed. As part of the overall tax rate of 22% on ordinary income, 8.70% is considered to be the central government income tax.

#### *Rate schedule of the bracket tax*

Rate (%)	NOK
0	0–208 050
1.7	208 050–292 850
4.0	292 850–670 000
13.6	670 000–937 900
16.6	937 900–1 350 000
17.6	1 350 000 and over

### Local government income tax

The overall tax rate on ordinary income is 22%. The local government (municipal and county) income tax is 13.3% points of the overall rate. Tax on ordinary income is levied after taking into account a standard allowance of NOK 88 250. Single parents were earlier eligible to an additional special tax allowance. The allowance is discontinued from March 2023. The child benefit has been increased corresponding to the tax-value of the allowance for single parents from March 2023. The deductions in the computation of ordinary income are:

#### *Standard reliefs*

- Basic allowance: each individual receives a minimum allowance equal to 46% of personal income, with a maximum of NOK 104 450.

#### *Non-standard reliefs*

The main non-standard allowances deductible from ordinary income are:

- Parent allowance: Documented expenses for childcare limited to:
  - maximum NOK 25 000 for one child.
  - plus, NOK 15 000 for each subsequent child.

The allowance applies in general to the spouse who has the highest income. Unused parent allowance may be transferred to the other spouse. The allowance is also applicable to single parents.

- Travel expenses related to work exceeding NOK 14 950.
- Labour union fees up to NOK 8 000.
- Donations to voluntary organisations up to NOK 25 000.
- Contributions to individual pension agreement schemes, maximum NOK 15 000.
- Premiums and contributions to occupational pension schemes in the private and public sector, unlimited.
- Unlimited deduction for interest payments.

The main non-standard tax credits are:

- Home savings scheme (BSU): The BSU scheme aims to encourage young people (under 34 years old) to save for a future home purchase. A wastable tax credit of 10% of annual savings up to NOK 27 500 in special accounts is granted. Total savings may not exceed NOK 300 000.

## Social Security Contributions

### ***Contributions to the national insurance scheme***

#### *Employees' contributions*

Employees' contributions to the National Insurance Scheme generally amount to 7.8% of personal wage income. Employees do not make contributions if their wage income is less than NOK 69 650. Once wage income exceeds this floor, an alternative calculation is made where the contributions equal 25% of the wage income in excess of the floor. The actual contributions made would represent the minimum between the alternative calculation and 7.8% of the total wage income.

Contributions from the self-employed are 11.0% of personal income attributable to labour.

#### *Employers' contributions*

Employer's social security contributions are due for all employees in both the private and the public sector. The contribution is geographically differentiated according to the municipality where the workplace is. The standard rates are 14.1%, 10.6%, 7.9%, 6.4%, 5.1% or 0% of gross wages. The highest rate applies to central parts of southern Norway. Lower rates may apply under certain circumstances. The weighted average rate is approximately 13%. An additional rate of 5% for salaries over NOK 750 000 was introduced in 2023. For 2024 the 5% additional rate applies for salaries over NOK 850 000. The government has announced that the additional rate of 5% will be discontinued from 2025.

## Universal Cash Transfers

### ***Transfers related to marital status***

None.

### ***Transfers for dependent children (child support)***

The following transfers are available:

NOK 21 192 per child aged 0–5 years (NOK 1 766 per month).

NOK 18 120 per child aged 6–18 years (NOK 1 510 per month).

Single parents receive an additional transfer of NOK 30 192 in 2024, independent of the number of children.

## **Main Changes in Tax/Benefit Systems Since 2002**

- Most important changes related to wage taxation in 2024:
  - The personal allowance was increased from NOK 79 600 to NOK 88 250.
  - Employees' contributions to the National Insurance Scheme were reduced by 0,1 percentage points.
  - The thresholds in the progressive bracket tax were increased for income bracket 1-4 while it was reduced for bracket 5. The rates were increased by 0,1 percentage point for bracket 3-5.
  - The threshold for the additional employer social contribution was increased from NOK 750 000 to NOK 850 000.
  - The maximum allowance for Labour Union fees was increased from NOK 7 700 to NOK 8 000.
  - The “Finnmark allowance”, a special allowance for people who are resident in the northernmost municipalities in the county Troms and Finnmark, was increased from NOK 20 550 to NOK 30 000. The bracket tax in bracket 3 was increased to the same level as for the rest of the country.
  - The maximum allowance for Labour Union fees was increased from NOK 7 700 to NOK 8 000.
- Most important changes related to wage taxation in 2023:
  - The personal allowance was increased from NOK 58 250 to NOK 79 600.
  - The upper limit in the minimum allowance for wage income was reduced by 5 pct. From 2023 there is no lower limit for the allowance.
  - Employees' contributions to the National Insurance Scheme were reduced by 0,1 percentage points and the threshold for paying employees' contributions to the National Insurance scheme was increased from NOK 64 650 to NOK 69 650.
  - For the employer social security contribution an additional rate of 5 % for salaries over NOK 750 000 was introduced.
  - The thresholds in the progressive bracket tax were increased for lower income (bracket 1 and 2), while the thresholds for higher income (bracket 3-5) were reduced and rates increased by 0.1 percentage point.
  - The maximum allowance for Labour Union fees was increased from NOK 5 800 to NOK 7 700.
- Most important changes related to wage taxation in 2022:
  - The rate for employees' contributions to the National Insurance Scheme was reduced for earned income and for self-employed.
  - The thresholds in the progressive bracket tax was reduced for higher incomes (bracket 3 and 4) and tax rates were increased.
  - A new bracket was introduced in the central government bracket tax for income above 2 million NOK with a tax rate of 17.4%.

- The allowance for Labour Union fees was increased from NOK 3 850 to NOK 5 800.
- The “Finnmark allowance”, a special allowance for people who are resident in the northernmost municipalities in the county Troms and Finnmark, was increased from NOK 15 500 to NOK 20 000.
- The upper limit for the seafarer's allowance was increased from NOK 80 000 to NOK 83 000.
- Most important changes related to wage taxation in 2021:
  - Rates in bracket 1 and 2 in the central government bracket tax were reduced from 1.9% and 4.2% to 1.7% and 4.0%, respectively.
  - The minimum allowance rate for personal income was increased from 45% to 46%.
- Most important changes related to wage taxation in 2020:
  - The standard allowance was reduced from NOK 56 550 to NOK 51 300 to accompany the NRK financing reform. Until 2019, the public broadcaster NRK was financed by a fee levied on households owning a TV. From 2020, direct transfers from the central government replace the broadcasting fee. The tax increase implied by the standard allowance reduction intends to pay for the NRK transfers. If the broadcasting fee is regarded as a tax, the overall effect of the NRK financing reform is reduced taxation for households with two or less tax paying members.
  - As a response to the COVID19 pandemic, payment of the second and third instalments (there are 6 instalments annually) employer's social security contribution was postponed from May 15<sup>th</sup> and July 15<sup>th</sup> to August 15<sup>th</sup> and October 15<sup>th</sup>, respectively. For the third instalment of the employer's social security contribution in 2020, the rate was reduced by 4 percentage points. In municipalities where the employer's social security contribution rate is 0%, a subsidy equating to 4% of gross wages is paid to employers. Payment of the first and second instalment (there are 4 instalments annually) of the advance tax of self-employed in 2020 was postponed from March 15<sup>th</sup> and May 15<sup>th</sup> to May 1<sup>st</sup> and July 15<sup>th</sup>, respectively.
- Most important changes related to wage taxation in 2019:
  - The general tax rate on ordinary income was reduced from 23% to 22%.
  - The progressive bracket tax increased in all four brackets, less than the reduction in the rate of ordinary income so as the marginal tax was reduced for all income levels.
  - Employers are required to report, withhold taxes, and pay employer's social security contributions on wages in the form of tax-exempted employee discounts with a market value exceeding NOK 8 000. Gifts received from the employer are tax free when the value exceeds NOK 2 000.
  - Employers are required to report, withhold taxes, and pay employer's social security contributions on tip/gratuities received from customers (previously tip was to be reported by the employers).
  - A withholding tax on the gross income for foreign employees at 25% was introduced.
- Most important changes related to wage taxation in 2018:
  - The general tax rate on ordinary income was reduced from 24% to 23%.
  - The progressive bracket tax increased in all four brackets, less than the reduction in the rate of ordinary income so as the marginal tax was reduced at all income levels.
  - The upper limit of the basic allowance for wage income/social security benefits was increased by NOK 2 860 and the rate was increased to 44%.
  - The standard allowance for class 2 was abolished, tax exemptions for employees on hire in shipping vessels was abolished, and the rules for commuters expenses were tighten.
- Most important changes related to wage taxation in 2017:

- The general tax rate on ordinary income was reduced from 25% to 24%.
- The rates under the bracket tax were increased with 0.71-0.82 percentage points, which is less than the reduction in the rate of ordinary income.
- The upper limit of the basic allowance for wage income/social security benefits was increased by NOK 3 300 and the rate was increased to 44%.
- The lower threshold for the payment of employee's social security contributions was increased from NOK 49 650 to NOK 54 650.
- Most important changes related to wage taxation in 2016:
  - The general tax rate on ordinary income was reduced from 27% to 25%.
  - A bracket tax with on personal income with 4 tax brackets was introduced and replaced the former surtax on personal income.
- Most important changes related to wage taxation in 2015:
  - The threshold in surtax bracket 1 was increased by NOK 5 750.
  - The upper limit of the basic allowance for wage income/social security benefits was increased by NOK 2 100.
  - The lower threshold for the payment of employee's social security contributions was increased from NOK 39 600 to NOK 49 650.
- Most important changes related to wage taxation in 2014:
  - The general tax rate on ordinary income was reduced from 28% to 27%.
  - The employee's social security contributions were increased by 0.4 percentage points.
  - The rate in the basic allowance against wage income was increased to 43%.
  - Tax class 2 for married couples was reduced.
- Most important changes in 2013:
  - The personal allowance for labour income was increased for low-income earners (below NOK 213 950) by 2 percentage points from 38% to 40% of their labour income.
  - The taxable value of second homes and commercial property for the purposes of net wealth tax was increased from 40% to 50% of estimated market value.
  - The basic allowance in the net wealth tax was increased from NOK 750 000 to NOK 870 000. Married couples will thus have a total basic allowance of NOK 1 740 000.
  - The current class 2 for sole providers was replaced by a special allowance for ordinary income which provides an equivalent tax benefit.
  - The maximum deduction for labour union fees was increased from NOK 3 750 to NOK 3 850.
- Most important changes in 2012:
  - The personal allowance for labour income was increased for low-income earners (below NOK 217 000) by 2 percentage points from 36% to 38% of their labour income.
  - For self-employed the wage allowance was abolished to eliminate residual discrimination between sole proprietorships with employees and limited companies.
  - In the deduction for travel expenses for travels between home and work the deduction rate per kilometre was increased for tax payers travelling between 35 000 km and 50 000 km per year.
  - The maximum deduction for labour union fees was increased by NOK 90 to NOK 3 750.
- In 2011 changes to the tax system was made to provide better incentives for people to work when drawing a pension. The tax limitation rule for early-retirement and old-age pensioners was replaced by a new tax allowance for pension income. The allowance ensures that people who only receive the minimum pension will continue not to pay income tax. The allowance is scaled down against pension income, so that the marginal tax on earned income is reduced to the same level as for wage earners. The marginal tax on capital for low-income pensioners is also reduced to the same

level as for other taxpayers. The new tax allowance is determined regardless of the spouse's income and married early-retirement and old-age pensioners will each have their own allowance. In addition, the pension income social security contribution is increased and the special allowance for age is discontinued.

- In 2010 a new formula-based system for determining the tax-assessed value of homes was introduced. The new tax-assessed value will be determined by multiplying the floor space of the dwelling by a square metre price based on the geographical location (neighbourhood, municipality, sparsely populated vs. densely populated area), size, age and type (detached, semi-detached, terraced, flat) of the property. For primary homes (owner-occupied), the per square metre rate will be set at 25% of the estimated sale price per square metre, whereas the rate for second homes, i.e., any other dwellings in addition to the primary home that are not defined as business or recreational properties, will be set at 40% of the estimated sale price per square metre. The current "safety valve" system is being continued so that taxpayers can appeal and have the tax-assessed value reduced to 30% of the documented fair market value (60% for second homes). In addition, the tax-assessed values of recreational properties are increased by 10%.
- Most important changes in 2009 were the abolition of the 80% rule, which primarily reduced the wealth tax of the richest. The wealth tax on equities for those who fall within the scope of the 80% rule has been more than doubled since 2005.
- The home savings scheme (BSU) was expanded in 2009 by increasing the annual savings amount to NOK 20 000 and the maximum aggregate savings amount to NOK 150 000.
- The rates of the inheritance tax were reduced, and the exempted amount was increased in 2009. The instalment scheme for family businesses was expanded through the abolition of the upper limit, and the payment period was increased from 7 to 12 years.
- Other changes in the personal tax base in 2009:
  - The fishermen's allowance was increased from NOK 115 000 to NOK 150 000.
  - The reindeer husbandry allowance was increased to the same level as the agriculture allowance.
  - The allowance for labour union fees was increased by NOK 450 to NOK 3 600.
  - The rate of the travel allowance was increased from NOK 1.40 per km to NOK 1.50 per km.
- The tax-free net income thresholds under the tax limitation rule were increased such as to ensure that singles and couples who receive the minimum state pension will still not be paying tax following the favourable social security settlement, they benefited from in 2008.
- A tax favoured contributions to individual pension agreement schemes was reintroduced as of 2008.
- From 1 January 2008 the employees' SSC rate for self-employed was increased from 10.7% to 11.0%.
- The upper threshold in the surtax schedule was substantially reduced from 2006 to 2007.
- The surtax rates were reduced in 2005 and 2006, as part of a reform of the dual income tax system. The basic allowance has been substantially increased.
- From 1 January 2006 the supplementary employer's social security contribution at 12.5% for gross wage income that exceeds 16 times "G" (average "G" is estimated to be NOK 74 721 in 2010) was removed.
- From 1 January 2006 the class 2 in the surtax was removed.
- From 1 January 2005 the ceiling in the parent allowance for two and more children was removed, and the maximum allowance was increased with NOK 5 000 for each child after the first. From 2008 the maximum allowance will be increased with NOK 15 000 for each child after the first.

- The additional child support of NOK 7 884 for children aged 1 and 2 years was abolished as of August 1, 2003.
- An allowance of maximum NOK 6 000 for donations to voluntary organisations was introduced as of 1 January 2003. Previously this allowance was coordinated with the allowance for labour union fees (with a combined maximum allowance). The allowance was increased to NOK 12 000 as of 1 January 2005.
- As of 1 July 2002, the employer's social security contribution rates for employees aged 62 years or older were reduced by 4 percentage points, although not below 0%. From 2007 the reduction was abolished.

## Memorandum Items

### ***Identification of an AW and calculation of earnings***

The wage series used refers to full time employees in the B-N industry group (ISIC rev.4).

The calculation of annual wage earnings is as follows:

- Weighted average monthly wage plus overtime times 12.

The average monthly wage is agreed payment for a wage earner working a normal agreed working-year. It includes bonus payments and other allowances, but not payments for overtime, sick leave, and an establishment's indirect wage costs. The sum is weighted with the number of persons employed in the different industry groups.

### ***Employers' contributions to private health and pension schemes***

No information available.

## 2024 Tax equations

The equations for the system for Norway in 2024 may be calculated on an individual or joint basis for married couples. Social security contributions are calculated on an individual basis. The calculation for Class 2 is chosen for married couples whenever this gives a lower value of tax than the corresponding Class 1 calculations. The functions which are used in the equations (Taper, MIN, Tax etc) are described in the technical note about tax equations. Variable names are defined in the table of parameters above, within the equations table, or are the standard variables “married” and “children”. A reference to a variable with the affix “\_total” indicates the sum of the relevant variable values for the principal and spouse. And the affixes “\_princ” and “\_spouse” indicate the value for the principal and spouse, respectively. Equations for a single person are as shown for the principal, with “\_spouse” values taken as 0.

	Line in country table and intermediate steps	Variable name	Range	Equation
1.	Earnings	earn		
2.	Allowances:			
	tax allowance (ordinary)	tax_al_princ	P	MIN(MAX(Basic_min_wage, MIN(earn_princ*Basic_rel_rate, Basic_max)) +Class_al+IF(AND(Married=0,Children>0),Special_al,o),' earn_princ)
	tax allowance (ordinary)	tax_al_spouse	S	MIN(MAX(Basic_min_wage, MIN(earn_spouse*Basic_rel_rate, Basic_max)) +Class_al, earn_spouse)
3.	Credits in taxable income	taxbl_cr	J	0
4.	CG taxable income (ordinary)	tax_inc	B	Positive(earn-tax_al)
5.	CG tax (personal+ordinary)	CG_tax	B	Tax(earn, Tax_sch)+Cent_rate_ord*tax1_inc
6.	Tax credits :	tax_cr	P	0
7.	CG tax	CG_tax	B	CG_tax
8.	State and local taxes	local_tax	B	(Local_rate*(tax_inc_princ+tax_inc_spouse))-tax_cr
9.	Employees' soc security	SSC	B	MIN(earn*SSC_rate, Positive(SSC_low_rate*(earn-SSC_low_lim)))
11.	Cash transfers	cash_trans	J	Children*child_supp+(Married=0)*(Children>0)*Child_supp_loneP
13.	Employer's soc security	SSC_empr	B	earn*SSC_empr +SINGLE(Positive(earn-SSC_G*SSC_Gmult))*SSC_rate_sup

Key to range of equation B calculated separately for both principal earner and spouse P calculated for principal only (value taken as 0 for spouse calculation) J calculated once only on a joint basis.

# Poland

---

This chapter includes data on the income taxes paid by workers, their social security contributions, the family benefits they receive in the form of cash transfers as well as the social security contributions and payroll taxes paid by their employers. Results reported include the marginal and average tax burden for eight different family types.

Methodological information is available for personal income tax systems, compulsory social security contributions to schemes operated within the government sector, universal cash transfers as well as recent changes in the tax/benefit system. The methodology also includes the parameter values and tax equations underlying the data.

The national currency is the Zloty (PLN). In 2024, PLN 3.989 were equal to USD 1. In that year, the average worker earned PLN 96 421 (Secretariat Estimate).

## Personal income tax system

An individual being a tax resident in Poland is liable to tax on the basis of world-wide income, irrespective of the source and origin of that income. (The term “residency” is understood similarly to Article 4 paragraph 2 point a) of the OECD Model Tax Convention on Income and Capital).

### Central government income tax

#### *Tax unit*

Individuals are taxed on their own income, but couples married at the end of calendar year<sup>1</sup> can opt to be taxed on their joint income. In the latter case, the ‘splitting’ system applies: the tax bill for a couple is twice the income tax due on half of joint income. This joint taxation can be applied only to taxpayers who file their tax declaration under the general tax scale. Effectively, it excludes capital income taxed at the flat 19% rate or sole proprietorship income taxed with lump-sum tax (tax rate depends on a type of activity). Single individuals with dependent children are also entitled to use the splitting system (their family quotient is two). For the purpose of this report, it is assumed that married couples are taxed on joint income.

#### **Tax base**

##### **Gross employment income**

For taxation purposes, taxable gross employment income in Poland includes both cash income and the value of benefits in kind. More specifically, gross employment income includes base salary, overtime payments, bonuses, awards, compensation for unused holidays, and costs that are paid in full or in part by the employer on behalf of the employee.

#### *Tax allowances and tax credits*

##### **Standard reliefs**

- Basic relief (since 1<sup>st</sup> January 2022 to 30<sup>th</sup> June 2022): A non-refundable tax credit of:<sup>2</sup>
  - PLN 5 100 – for the tax base without upper limit.
- Basic relief (since 1<sup>st</sup> July 2022): A non-refundable tax credit of:<sup>3</sup>
  - PLN 3 600 – for the tax base without upper limit.
- Marital status relief: None.
- Relief for children: Yes<sup>4</sup>.

Note: The basic relief tax credit amount will be settled on the final-year tax return according to the rules applicable from July 1<sup>st</sup>, 2022, for the whole tax year.

A taxpayer can deduct from the due tax the amount, which is equal for each month of raising a child:

- PLN 92.67 (annually PLN 1 112.04) for the first child, if the income received by parents (married or single parent, who meets special requirements) does not exceed in the tax year the amount of PLN 112 000. For taxpayers who do not settle their taxes jointly the threshold of income is PLN 56 000.
- PLN 92.67 (annually PLN 1 112.04) for the second child.

- PLN 166.67 (annually PLN 2 000.04) for the third child.
- PLN 225.00 (annually PLN 2 700.00) for the fourth and every next child.

Since 1<sup>st</sup> of January 2015 taxpayers whose due tax is lower than the amount of relief for children, may claim for cash refund for amount of relief which has not been utilized. However, such cash refund cannot exceed the amount of deductible social security and health insurance contributions paid by taxpayer (with some exceptions).

- Relief for paid social security contributions: An allowance is provided for all social security contributions paid by the taxpayer. The allowance is deducted from taxable income.
- Relief for selected work-related expenses: Standard deductions depend on the number of workplaces and on whether place of residence and workplace are within the same town/city or not. The annual amounts in PLN (deductible from income) are:

	One workplace	Two/more workplaces
Workplace in the same town/city as place of residence	3 000 since 1 <sup>st</sup> October 2019 <sup>5</sup>	4 500 since 1 <sup>st</sup> October 2019
Workplace in different town/city as place of residence	3 600 since 1 <sup>st</sup> October 2019	5 400 since 1 <sup>st</sup> October 2019

Note: If the actual commuting expenses exceed standard deduction, relief can be determined by the actual expenses incurred solely on personal season tickets.

### Main non-standard tax reliefs

#### Allowances:

- Specified expenses for the purpose of rehabilitation incurred by a taxpayer who is a disabled person, or a taxpayer, who supports the disabled. For particular expenses exists deduction limit.
- Equivalent of blood donations, donations made for the purposes of public benefit activity and of religious practice – in the amount of donation, no more than 6% of income.
- Donations made for charity church care - in the amount of the donation.
- Fee for membership in trade unions (up to PLN 500).
- Expenses incurred for the use of the Internet – a taxpayer is entitled to deduct the Internet tax allowance within the next two years, providing that during the phase preceded this period he did not deduct expenses for the use of the Internet (up to PLN 760).
- Expenses incurred during undertaking of thermo-modernization project for single-family residential building up to PLN 53 000.
- Abolished allowance (since 2007 continued on the acquired right basis) for interests payments on mortgage loans raised no later than in 2006 on acquisition of housing property on the primary market – up to the amount of interests related to the part of loan not exceeding PLN 325 990 for investments finished in 2017.

#### Tax credits:

- Donation made to public benefit organizations – up to 1,5% of due tax.<sup>6</sup>
- Abolished tax credits (continued on the acquired rights basis), i.e., expenses for saving with the aim of buying a house or flat, the amount of social contributions paid on income of an unemployed person hired by a taxpayer in order to take care of their children and/or house.

#### Exemptions:

- Gross wages up to PLN 85 528 for people under 26 years old are exempted from PIT.

- Gross wages up to PLN 85 528 for employed seniors or entrepreneurs who, despite having reached the retirement age, did not take up a pension and are still economically active, are exempted from PIT.
- Gross wages up to PLN 85 528 for Polish citizens returning from abroad (before the decision to return to the country, a minimum of three years of residence and work abroad) are exempted from PIT for a period of 4 years.
- Revenues up to PLN 85 528 for families with 4 or more children (for taxpayers who in the tax year held parental authority, the function of legal guardian or for persons who held the function of a foster family) are exempted from PIT.
- The sum of all four exemptions cannot be higher than PLN 85 528 per taxpayer.

### *Tax schedule*

Since 1<sup>st</sup> January 2022 to 30<sup>th</sup> June 2022:

Tax base (in PLN)		Tax amount	
Over	Below		less a basic tax credit
0	120 000	17%	
120 000		PLN 15 300+ 32% of surplus over PLN 120 000	

Since 1<sup>st</sup> July 2022:

Tax base (in PLN)		Tax amount	
Over	Below		less a basic tax credit
0	120 000	12%	
120 000		PLN 10 800+ 32% of surplus over PLN 120 000	

Note: Two tax schedules for 2022 exists due to the overhaul of the Polish Deal tax reform (first introduced in 1<sup>st</sup> January 2022 and then overhauled in June 2022). The new tax schedule is in force from 1<sup>st</sup> July 2022 and is applicable for the whole tax year.

### **State and local income tax**

There are no regional or local income taxes.

### **Wealth tax**

There is no wealth tax.

### **Solidarity surcharge**

The act on the Solidarity Support Fund for Disabled Persons entered into force on 1 January 2019. The purpose of a legislative proposal was to introduce a new institution in a form of fund, managed by the Minister of Family, Labour and Social Policy, which would be focused on social support for people with disabilities. In 2020 the Fund was renamed to Solidarity Fund. The source of the Fund's revenues are primarily a compulsory contribution to the Fund representing 0.15% in 2019, 0.45% in 2020 and since 2021 1.45% of the base of the contribution to the Labour Fund (the compulsory contribution to the Labour Fund has decreased from 2.3% of the basis for the calculation of contributions to pension and disability insurance to 2% in 2020 and to 1% since 2021), as well as the solidarity contribution on the income of individuals - in the amount of 4% from a surplus of income (gross income minus SSC of employee) over PLN 1 million for a tax year. Solidarity contribution is paid on the basis of the previous tax year.

## Social Security Contributions

### ***Employees' contributions***

Employees pay 13.71% of the gross wage. This contribution includes:

- Pension insurance contribution – 9.76% of the gross wage.<sup>7</sup> 3.65 percentage points of the pension contribution are treated as non-tax compulsory payments because these payments are either made to the OPF (1.46%) and to personal sub-account in ZUS (2.19%) or only to sub-account in ZUS (3.65%).
- Disability insurance contribution – 1.5% of the gross wage,
- Sickness/maternity insurance contribution – 2.45% of the gross wage,
- In case of pension and disability insurance, contributions are not paid on the part of the wage that exceeds PLN 234 720.<sup>8</sup>

### ***Employers' contributions***

In respect of income paid under an employment contract with a Polish entity, employers have an obligation to pay social security contributions and payroll taxes equal to 20.01% of gross wage. This value consists of:

A) Social security contributions:

- 9.76 % are aimed for pension insurance<sup>9</sup>. 3.65 % of the pension contribution are treated as non-tax compulsory payments because these payments are either made to the OPF (1.46%) and to personal sub-account in ZUS (2.19%) or only to sub-account in ZUS (3.65%),
- 6.5 % are aimed for disability insurance,
- 1.20 % (on average) accident insurance,
- In case of pension and disability insurance, contributions are not paid on the part of the wage that exceeds PLN 234 720.

B) Payroll taxes:

- 1 % for Labour Fund,
- 1,45% for Solidarity Fund,
- and 0.1% for the Guaranteed Employee Benefit Fund.

## Universal Cash Transfers

### ***Transfers related to marital status.***

None.

### ***Transfers for dependent children***

From 1st of November 2012 families where the average monthly income per household member for the previous period is no greater than PLN 539 or PLN 623 when there are one or more disabled children in the household) are entitled to family allowances. From 1st of November 2015 the income criteria were increased to PLN 674 and PLN 764. Families receive PLN 89 (from 1st of November 2016 – PLN 95) monthly for a child no older than 5 years, PLN 118 (from 1st of November 2016 – PLN 124) monthly for a child of 5 up to 18 years old, and PLN 129 (from 1st of November 2016 – PLN 135) monthly for a child of

18 up to 24 years old. The calculations in this Report are based on the assumption that the children are aged between 6 and 11 years inclusive.

There are several supplements to family allowances:

- for large families – PLN 90 (from 1st of November 2016 – PLN 95) monthly for the 3rd and next children in the family.
- for education of disabled children – PLN 80 (from 1st of November 2016 – PLN 90) monthly for children not older than 5 years and PLN 100 (from 1st of November 2016 – PLN 110) for children older than 5 years.
- for single parents - a supplement of PLN 185 (from 1st of November 2016 – PLN 193) for each child up to a maximum of PLN 370 (from 1st of November 2016 – PLN 386) for all children (and PLN 265 (from 1st of November 2016 – PLN 273) for a disabled child up to a maximum of PLN 530 (from 1st of November 2016 – PLN 546) for all children).
- for parents of new born children – a supplement of PLN 1000 paid once.
- for parents of children starting school year – a supplement of PLN 100 paid each year.
- for parents of children studying outside the place of residence – a supplement of PLN 113 paid monthly for children living in area where school is located or a supplement of PLN 69 for children who are commuting to school.
- for parents of children covered by an institutional care – a supplement up to PLN 400 per month per child for institutional care costs. It is not available if parents are receiving benefits for the child from the Family Care Capital (see section on Family Care Capital).

### *Parental benefit*

On 1 January 2016 a parental benefit was introduced, aside from the already existing family and care benefits. The parental benefit is provided to families to which a child is born but whose members had not been eligible to a parental or maternity leave: students, the unemployed (regardless of registration with a labour office), people employed on the basis of civil law contracts, employees and people pursuing non-agricultural economic activity if they are not collecting maternity benefit. The parental benefit is granted regardless of income in the amount of PLN 1 000 a month for 52 weeks (after giving birth to one child in one labour), 65 weeks (after giving birth to two children in one labour), 67 weeks (after giving birth to three or four children in one labour) and for 71 weeks (after giving birth to five or more children in one labour).

### *Family 500 Plus Programme*

Financial support for families with children

1 April 2016 (Act on state support for upbringing children entered into force 1 April 2016)

The Act on state support for upbringing children introduced new benefits- in amount of PLN 500 monthly per child until the child turns 18, which would be means-tested for the first child and available for all families for every additional child. The new benefit of PLN 500 a month (untaxed) is available for parents, actual guardian or legal guardian of a child until the child turns 18. The benefit will also be paid for the second child and any subsequent child without application of any income criteria. It will be paid for the first child if income of the family per one member does not exceed PLN 800 a month (PLN 1 200 if there is a disabled child in the family)<sup>10</sup>. Eligibility to this benefit is established for a year (from 1 October to 30 September).

Since 1st July 2019 the extension of 500+ programme came into force: there is no income testing hence every child is eligible for the benefit so the transfer has become universal.

Since 1<sup>st</sup> January 2024 the amount of the benefit was changed to PLN 800 per month per child.

### *Good Start Programme*

Since 2019 a new benefit of PLN 300 was introduced. Every child that is attending school until it turns 20 is eligible for this benefit which is paid once a year at the start of the school year. There is no income test.

### *Family Care Capital*

Since 2022 a new benefit up to PLN 12 000 was introduced. Family Care Capital is granted to parent for the second and subsequent children in a family (age 12-35 months). Child's parent can choose whether to receive the benefit in the amount of PLN 500 for 24 months or PLN 1 000 for 12 months. The benefit is not granted if child has been placed in foster care, parent has been deprived of parental authority or parent or a member of family are entitled to receive abroad a benefit similar to Family Care Capital (not applicable to benefits from EU/EFTA Member States or the United Kingdom). The support will be independent of family income and funds are tax exempted. The Family Care Capital will be replaced by a new benefit, "Active Parent", which will come into effect on 1<sup>st</sup> October 2024.3.2.5 Active Parent

Active Parent is a new benefit which will come into effect on 1<sup>st</sup> October 2024. It involves the introduction of an additional benefit for people raising children aged 12 to 35 months. This benefit is designed to support parents, particularly mothers, in making decisions about returning to the labour market after giving birth. Active Parent consists of three options, from which parents can choose only one: "active parents at work", "active in daycare", "active at home."

The "active parents at work" benefit will be available to working parents for a child aged 12 to 35 months, not covered by institutional care, amounting to PLN 1500 per month per child.

The "active in daycare" benefit will be available regardless of the parents' employment status for a child covered by institutional care. The benefit will amount up to PLN 1500 per month per child in the form of a reimbursement for institutional care costs.

The "active at home" benefit will be available under similar conditions as the Family Care Capital, with the difference that the "active at home" benefit can be obtained for each child, including the first and only child aged 12 to 35 months. This support is directed to parents who are either not eligible or choose not to use the "active parents at work" or "active in daycare" benefits because they remain economically inactive or their child does not attend an institutional care facility. Additionally, it will not be possible to receive double the support for 1 year instead of 24 months, as is the case with the Family Care Capital.

It is worth noting that the OECD methodology does not include children of an age that entitles parents to receive benefits for children aged 12 to 35 months, so the effect of the benefit will not be visible in the results.

## **Main Changes in Tax/benefit Systems Since 2012**

Since January 2017, the tax schedule has been changed by introduction of degressive basic tax credit. The work-related expenses, tax allowances, relieves are the same as in previous years.

Since 2012, there were also changes in Social Security Contribution. Since February 2014, 14.96% of the old-age insurance contribution (2.92 percentage points) are transferred by ZUS to a privately-managed fund (OPF) but since July 2014 this part of contribution will be transferred only if insured persons decides to – otherwise all 7.3 percentage points of the contributions will be passed to subaccount in ZUS.

On 1<sup>st</sup> January 2019 as the solidarity contribution on the income of individuals - in the amount of 4% from a surplus of income (gross income minus SSC of employee) over PLN 1 million for a tax year was introduced.

Since August 2019 gross wages up to PLN 85 528 for people under 26 years old are exempted from PIT.

Since October 2019 the first marginal tax rate has been lowered from 18% to 17% and work-related expenses were more than doubled.

Since 1<sup>st</sup> January 2022 major fiscal reform called Polish Deal was introduced, including, inter alia:

- The new non-refundable tax credit of PLN 5100 for the tax base without upper limit.
- The new income threshold for 32% PIT tax rate – the rate is applicable for the excess of taxable income over 120 000 PLN.
- The elimination of tax-deductible health insurance contribution – before 2022 the amount of 7.75% of health insurance contribution base was deductible from the tax liability.
- The introduction of the middle-class tax relief which aimed at compensating for abolition of health insurance tax deduction. The middle-class tax relief applied for selected taxpayers who earn between PLN 5 701 to PLN 11 141 and were taxed under the tax scale.
- The increase of the amount of revenue subject to 50% tax-deductible costs for copyrights and related disposal of copyrights from PLN 85 525 to PLN 120 000.
- A new tax relief for income up to PLN 85 528 for: parents of four or more children, persons returning from abroad and working seniors.

Since 1<sup>st</sup> July 2022 Polish Deal tax reform was thoroughly overhauled and modified. The amendments of the previous reform were introduced, including, inter alia:

- The reduction of the PIT rate for the first income tax bracket from 17 to 12 percent.
- The abolition of the middle-class relief, with the qualification that taxpayers might settle their tax return for 2022 applying previous tax rules if it is more advantageous for them.
- The introduction of tax-deductible health insurance contribution for individuals who obtain revenue from business activity subject to fixed amount tax, flat tax or lump-sum tax on recorded revenue. The annual deduction cap amounts to PLN 8 700 for flat taxpayers, to 50 percent of the amount of contribution paid for lump-sum tax on recorded revenue payers and to 19% of contribution paid for fixed amount taxpayers. Health insurance can be deducted from taxable income, not from tax, as it was before the reform.
- Due to the reduction of the PIT rate the new deductible amount is equal to PLN 3 600 (PLN 30 000 x 12%) and the amount reducing the monthly advance tax payments will be decreased to PLN 300 (PLN 3 600/12).

Additionally, since 1<sup>st</sup> January 2022 new SSC ceiling was introduced. Income over PLN 208 050 is contribution exempt. This number is calculated as an average earnings in economy multiplied by 30 and changed each year.

Since 1<sup>st</sup> January 2024 the amount of benefit provided under Family 500+ Programme was changed to PLN 800 per month per child.

Since 1<sup>st</sup> October 2024 Family Care Capital will be replaced by a new benefit, Active Parent, which is described in section on Family Care Capital.

### ***Changes to labour taxation due to the COVID pandemic in 2020 and 2021s***

Exemption from social security contributions (employee's and employer's part) for up to 3 months period for enterprises registered before February 2020:

- exemption of 50% from SSC in enterprises that have reported to Social Security Fund from 10 to 49 people.
- exemption of 100% from SSC in enterprises that have reported to Social Security Fund from 1 to 9 people.

Since less than half of the full-time workers within sectors B to N are affected by the temporary exemption of social security contributions, the measure is not considered in the Taxing Wages calculations.

Subsidies for employee remuneration costs and social security contributions up to three months period:

- a subsidy to downtime pays in the amount of 50% of minimum wage plus social security contributions
- a subsidy up to half of the salary of employees, but no more than 40% of the average monthly salary from the previous quarter plus social security contributions

The subsidy can be granted if the decline in sales revenues amounted to:

- not less than 15% - calculated as the ratio of total sales revenues in the following two months period after Jan 2020, to the total sales revenues from the corresponding 2 months of the previous year (i.e. 2019); or
- not less than 25% - calculated as the ratio of total sales revenues in any given month in the period after Jan 2020 compared to the turnover from the previous month.

Subsidies for employee remuneration costs and social security contributions for micro, small and medium-sized enterprises for up to 3-month period in the amount of:

- 50% of minimum wage plus social security contributions per employee, if the decline in sales revenues amounted to 30%,
- 70% of minimum wage plus social security contributions per employee, if the decline in sales revenues amounted to 50%,
- 90% of minimum wage plus social security contributions per employee if the decline in sales revenues amounted to 80%.

A decline in total sales revenues is calculated based on the following two months of 2020 compared to the total sales revenues from the corresponding 2 months of 2019.

From May 16<sup>th</sup>, 2022, the COVID-19 epidemic state in Poland ceased to apply. During the pandemic period there were introduced numerous tax and contribution preferences. Those preferences have limited application time. They expired at the end of May, or at the end of a fiscal year when the recall took place, or at the end of the next fiscal year.

## Memorandum Items

### ***Identification of AW and valuation of earnings***

The Polish Central Statistical Office calculates average monthly wages and salaries for employees on the basis of reports of enterprises. The figures include overtime and bonus payments and also include information for part-time employees converted to full-time equivalents. Male and female workers are included. The information, which includes estimates for different sectors, is published in the monthly *Statistical Bulletin*.

### ***Employers' contributions to private pension, health and related schemes***

Employee Capital Plans (pol. Pracownicze Plany Kapitałowe - PPK) is a form of voluntary pension savings scheme organized by the employer and coordinated by a government agency, The Polish Development Fund (pol. Polski Fundusz Rozwoju - PFR). Each employee is by default enlisted into the scheme but he/she can opt out, although every 4 years he/she is enlisted again and has to sign out again. If an employee decides to participate he/she must pay at least 2% of his/her salary (if the salary is below 120% of a minimum wage the minimum rate is 0,5%), whereas an employer pays additional 1,5%. Both –

employee's and employer's parts can be increased up to 4%. The savings are managed by private financial corporations and the government adds a one-off welcome payment of PLN 250 and an annual payment 240 PLN. However, less than a half of employees participate in the PPK. Due to being a non-compulsory private saving scheme it is not treated as compulsory tax.

## 2024 Tax equations

The equations for the Polish system are mostly calculated on a family basis.

The standard functions which are used in the equations (Taper, MIN, Tax etc) are described in the technical note about tax equations. Two additional functions (Tax93 and ftax) have been incorporated to carry out an iterative calculation for central government tax. These allow for the fact that the church tax is calculated as 9% of Central Government tax and is also allowed as a deduction when calculating taxable income. Variable names are defined in the table of parameters above, within the equations table, or are the standard variables “married” and “children”. A reference to a variable with the affix “\_total” indicates the sum of the relevant variable values for the principal and spouse. And the affixes “\_princ” and “\_spouse” indicate the value for the principal and spouse, respectively. Equations for a single person are as shown for the principal, with “\_spouse” values taken as 0.

	Line in country table and intermediate steps	Variable name	Range	Equation
1.	Earnings	earn		
	Quotient for tax calculation	quotient	J	$1 + \text{MAX}(\text{Married}, (\text{Children} > 0))$
2.	Allowances:	tax_al	J	$\text{work\_exp} + \text{MIN}(\text{earn\_spouse}, \text{work\_exp}) + \text{SSC} + \text{SSC\_old\_e\_OPF} * \text{MIN}(\text{earn}, \text{SSC\_c})$
3.	Credits in taxable income	taxbl_cr	J	0
4.	CG taxable income	tax_inc	J	$\text{Positive}(\text{earn} - \text{tax\_al})$
5.	CG tax before credits	CG_tax_excl	J	$\text{quotient} * \text{Tax}(\text{tax\_inc} / \text{quotient}, \text{tax\_sch})$
6.	Tax credits :			
	Basic credit	basic_cr	J	3600
	Health insurance	health_ins_cr	B	0
	Child credit	child_cr	J	$\text{If}(\text{earn\_total} < \text{Child\_cr\_lim}, \text{children} * \text{child\_cr}, 0)$
	Total tax credits	tax_cr	J	$\text{basic\_cr} + \text{health\_ins\_cr} + \text{child\_cr}$
7.	CG tax	CG_tax	J	$\text{MAX}(0, \text{Positive}(\text{CG\_tax\_excl} - \text{basic\_cr} - \text{health\_ins}) - \text{child\_cr}) - (\text{child\_cr} > \text{Positive}(\text{CG\_tax\_excl} - \text{basic\_cr} - \text{health\_ins})) * \text{MIN}(\text{SSC\_al} + \text{health\_ins}, \text{child\_cr} - \text{Positive}(\text{CG\_tax\_excl} - \text{basic\_cr} - \text{health\_ins}))$
8.	State and local taxes	local_tax	J	0
9.	Employees' soc security	health_ins	B	$(\text{earn} - (\text{MIN}(\text{earn}, \text{SSC\_c}) * (\text{SSC\_old\_e} + \text{SSC\_dis\_e}) + \text{earn} * \text{SSC\_s})) * \text{health\_ins}$
.		SSC	B	$(\text{SSC\_old\_e\_ZUS} + \text{SSC\_dis\_e}) * \text{MIN}(\text{earn}, \text{SSC\_c}) + \text{SSC\_s} * \text{earn}$
11.	Cash transfers	cash_tran	J	$= \text{MAX}(0, (\text{fam\_net\_inc} < \text{fam\_ben\_lim} * (1 + \text{Married} + \text{Children}) - 240 + (\text{Children} * \text{fam\_ben} + (1 - \text{Married}) * (\text{Children} > 0) * \text{MIN}(\text{fam\_ben\_Spsup} * \text{Children}, \text{fam\_ben\_Spsup\_lim}))) * (\text{Children} * \text{fam\_ben} + (1 - \text{Married}) * (\text{Children} > 0) * \text{MIN}(\text{fam\_ben\_Spsup} * \text{Children}, \text{fam\_ben\_Spsup\_lim}))) - \text{IF}(\text{fam\_net\_inc} > \text{fam\_ben\_lim} * (1 + \text{Married} + \text{Children}), \text{fam\_net\_inc} - \text{fam\_ben\_lim} * (1 + \text{Married} + \text{Children}), 0)) + (\text{Children} * \text{plus\_ben}) + (\text{gs\_ben} * \text{Children})$
		fam_net_inc	J	$= \text{Positive}(\text{earn} - \text{SSC\_al} - \text{health\_ins} - \text{CG\_tax} - \text{work\_exp})$
13.	Employer's soc security	SSC_empr	B	$(\text{SSC\_old\_ZUS} + \text{SSC\_dis}) * \text{MIN}(\text{earn}, \text{SSC\_c}) + \text{SSC\_a} * \text{earn}$
		Payroll tax	B	$\text{Earn} * \text{Payroll\_tax}$

Key to range of equation:

B calculated separately for both principal earner and spouse,

P calculated for principal only (value taken as 0 for spouse calculation),

J calculated once only on a joint basis.

## Notes

<sup>1</sup> However, a widowed spouse is entitled to apply the joint income taxation.

<sup>2</sup> Applicable only in a tax return.

<sup>3</sup> Applicable only in a tax return.

<sup>4</sup> It concerns a child of 18 years old or younger or a child up to 25 years old provided they are students or a disabled child irrespective of their age. The actual description in the Main Changes in Tax/benefit Systems Since 2012 section.

<sup>5</sup> For the purpose of the calculations in this publication, it is assumed that the worker has the same town/city as place of residence.

<sup>6</sup> This relief is distinct from an allowance for donations deducted from income. It allows for transferring 1.5% of final tax contribution to a selected public benefit organization. It lowers the final tax effectively going to the tax office, but not the total tax liability for the taxpayer.

<sup>7</sup> Since July 2014 out of total 19.52% of social contributions 7.3% goes to subaccount in ZUS either – if voluntarily stated by insured person – 2.92% goes to account in open ended funds and 4.38% to subaccount in ZUS.

<sup>8</sup> The contribution ceiling of pension and disability insurance funds for a given calendar year may not exceed thirty times the amount of the projected average monthly remuneration in the national economy for that year, as set forth in the Budgetary Act.

<sup>9</sup> Since July 2014 out of total 19.52% of social contributions 7.3% goes to subaccount in ZUS either – if voluntarily stated by insured person – 2.92% goes to account in open ended funds and 4.38% to subaccount in ZUS.

<sup>10</sup> Some of the features (namely, joint taxation and child tax credit) of the Polish tax system are optional and therefore can influence eligibility to “500+” family, and in a consequence tax wedge, in a non-linear way. As they both determine “net income for income test” and because of no tapering of “500+” sometimes it may be preferable not to use joint taxation or child tax credit (or to use it partially) in order to get the most appropriate net income to maximize the family benefit payments. As for now model treats both joint taxation and child tax credit as obligatory. With the parameters in the excel file (average wage etc.) it does not alter the results. However, if any of the parameters change, the previous statement may not hold.

<sup>11</sup> Lump-sum annual work expenses for an employee having one workplace and living in the place (town, city) where the workplace is; employees living outside the city (town) where their workplace is may deduct 3 600 PLN annually.

# Portugal

---

This chapter includes data on the income taxes paid by workers, their social security contributions, the family benefits they receive in the form of cash transfers as well as the social security contributions and payroll taxes paid by their employers. Results reported include the marginal and average tax burden for eight different family types.

Methodological information is available for personal income tax systems, compulsory social security contributions to schemes operated within the government sector, universal cash transfers as well as recent changes in the tax/benefit system. The methodology also includes the parameter values and tax equations underlying the data.

The national currency is the Euro (EUR). In 2024, EUR 0.932 equaled USD 1. The Secretariat has estimated that in that same year the average worker earned EUR 22 588 (Secretariat estimate).

## Personal Income Tax

### ***Taxes levied by central government.***

#### *Tax unit*

The standard rule is separate taxation. However, families may opt for joint taxation. Income includes the income of any dependent children. Tax is computed on aggregate net income in the various categories of income, i.e., after the deductions specific to each category and standard and non-standard reliefs.

#### *Standard and non-standard reliefs and tax credits*

##### **Standard reliefs**

Standard deduction of EUR 4 350,24. If compulsory contributions to social protection schemes and statutory sub-schemes for health care exceed that limit, the deduction will equal the amount of those contributions.

##### **Non-standard reliefs**

For income received from 1 January 1999 onwards, the majority of the standard reliefs have been replaced by tax credits (see Section on Tax credits).

Non-standard reliefs still in effect:

A deduction is provided for the portion of trade union dues not constituting consideration for benefits in the realm of health care, education, assistance for the elderly, housing, insurance or social security, up to 1% of the taxpayer's gross income, increased by 50%. These dues are not taken into account in the calculations underlying this Report.

#### *Social security contributions*

Social security contributions are totally deductible if they exceed EUR 4 350,24 per taxpayer, in which case the deduction for the contributions replaces the standard earned income deduction (see Section on Standard reliefs).

#### *Tax credits*

Basic credits:

- EUR 600 for each dependent child. This tax credit is increased by EUR 126 for dependent children whose age does not exceed 3 years old. The value is increased to EUR 300 and EUR 150 for the second and following whose age does not exceed 6 years old.
- EUR 525 for each ascendant whose income does not exceed the minimum pension benefit. When there is only one ascendant, the tax credit increases by EUR 110.
- 35% of household general expenses up to a limit of EUR 250, per taxpayer; this limit is increased to 45% and EUR 335, respectively, for single parents.
- Non-reimbursed health care costs, not covered by Social Security: 15% of health care costs, with a limit of EUR 1 000.

- Expenditures for educating the taxpayer or the taxpayer's dependents: 30% of outlays, up to EUR 800.
- Costs for sanatoria or retirement homes for taxpayers, their ascendants and collaterals up to the third degree whose income does not exceed the national minimum wage: 25% of expenses up to EUR 403.75.
- 15% of the amount spent (up to EUR 296.00) on interest regarding the acquisition, construction or improvement of the taxpayer's primary residence, or leasing contracts (applicable to contracts up to 31/12/2011); 30% of the amount spent (up to EUR 400) on rents paid by students under 25 years old, studying more than 50km away from home; and 15% of the amount spent (up to EUR 800) on rents paid by a tenant for his permanent residence under an agreement typified by the law. The EUR 296 is also increased for taxpayers in the first tax rate bracket and for taxpayers with income above the first-rate bracket upper limit and below EUR 30.000, according to the formula below.

$$296 + [(450 - 296) * \left( \frac{30000 - \text{liable income}}{30000 - 7703} \right)]$$

The EUR 800 is also increased for taxpayers in the first tax rate bracket and for taxpayers with income above the first-rate bracket upper limit and below EUR 30.000, according to the formula below.

$$800 + [(900 - 600) * \left( \frac{30000 - \text{liable income}}{30000 - 7703} \right)]$$

- 20% of alimony payments compulsory under court order or court-approved agreement.
- 30% of education expenditures and 25% of life insurance premiums, up to a limit of 15% of the tax liability, for handicapped taxpayers or dependents.
- 15% of VAT paid for certain services (restaurants, lodging, hairdressers, and auto-repair), 35% of VAT paid for veterinarian medicines and 100% of VAT paid for public transport use up to a limit of EUR 250. This benefit is not included on the limits referred to on the next page.

Tax credits from tax benefits:

- Individual Retirement Savings Plans (PPRs): 20% of amounts invested, for unmarried taxpayers or for each spouse, up to:
  - EUR 400 for taxpayers under 35.
  - EUR 350 for taxpayers over 35 and under 50.
  - EUR 300 for taxpayers over 50.
- Social Security Individual Accounts: 20% of amounts invested, for unmarried taxpayers or for each spouse, up to a limit of EUR 350.

Donations granted on the conditions stated in the statutes governing charities (grants to central, regional or local government, special "social solidarity institutions", museums, libraries, schools, institutes, educational or research associations, public administrative bodies, etc.): 25% of donations, limited in certain cases to 15% of the donor's tax liability. However, the total of tax credits related to health care costs, education and training, alimony, retirement homes, VAT paid, house expenses and tax benefits cannot exceed the values of the following amounts:

Taxable income (EUR) (R)	Limit
Up to 7 703	Without limit
Between 7 703 and 80 000	$1000 + [(2500 - 1000) * \left( \frac{80000 - \text{liable income}}{80000 - 7703} \right)]$
Over 80 000	EUR 1 000

Limits are increased in 5% for each dependent, for households with three or more dependents.

### *Family status- determination of taxable income*

The default status is individual taxation. Couples can opt for joint taxation based on the income-splitting system as it is described below. In the Taxing Wages calculations, the most favourable system is chosen.

### *Tax rate schedule (applicable to 2024 income)*

Taxable income (EUR) (R)	Marginal tax rate (%) (T)	Amount to deduct (EUR) (K)
Up to 7 703	13	---
Over 7 703 up to 11 623	16,5	365.89
Over 11 623 up to 16 472	22	947.04
Over 16 472 up to 21 321	25	1441.14
Over 21 321 up to 27 146	32	2880.47
Over 27 146 up to 39 791	35.5	4034.17
Over 39 791 up to 51 997	43.50	6620.43
Over 51 997 up to 81 199	45.00	7400.21
Over 81 199	48.00	9836.45

The reference value for the minimum existence income will be the maximum between EUR 11480 and 1.5\*14\*(Social Benefits Index).

For residents in the Autonomous Regions of the Azores, reduced tax rates are applicable. Tax calculation formula (I = Income tax due:

Un married taxpayers:  $I = R \times T - K - C$

Married taxpayers can opt for joint taxation based on the income splitting method (with one or two earned incomes/see Section on Family status- determination of taxable income):

- $I = \{ [(R : 2) \times T - K] \times 2 \} - C$  Where

R= Taxable income, after deduction of standard and non-standard reliefs (see Sections under Standard and non-standard reliefs and tax credits)

T = Tax rate corresponding to the taxable income bracket

K = Amount to be deducted from each bracket

C = Tax credits (see Section on Tax credits)

**Surtax:**

An additional surtax, solidarity tax rate, was introduced by the 2012 State Budget and is applicable on highest income bracket. The surtax tax rate is now 2.5% applicable to taxable income between EUR 80 000 and EUR 250 000 and 5% for taxable income above EUR 250 000.

*Special family situations***Handicapped taxpayer/spouse, with a disability rating of 60% or more:**

A tax credit corresponding to 4 times the social benefits index is granted for each taxpayer or spouse.

**Handicapped dependent children, with a disability rating of 60% or more:**

A tax credit corresponding to 2.5 times the social benefits index is granted for each dependent child.

**Handicapped taxpayer/spouse or dependent children, with a disability rating of 90% or more:**

An additional tax credit corresponding to 4 times social benefits index is granted for each taxpayer or spouse or dependent child.

*Non liable income*

- Lawfully granted family allowances.
- Living expenses per diem, up to the limits established for national civil servants.
- Meal allowances, up to the amount established for national civil servants, increased by 20% or 60% in the event of a meal allowance in the form of meal vouchers.

**Compulsory social security contributions to schemes operated within the government sector.**

Rates and ceilings: social security contributions are levied on gross pay and are not subject to any ceiling.

***Employee contributions***

As a rule, the rate of employee contributions is 11% of gross pay, with no ceiling.

***Employer contributions***

The employer's rate of social security contributions is 23.75% of gross pay, with no ceiling.

***Areas of social protection***

- Health (sickness, disability, work accidents, work-related illness);
- Old age, survival.
- Maternity.
- Family (family allowances).
- Unemployment.

## Universal cash benefits

### *Benefits for dependent children*

The basic principle is to grant higher monthly social benefits to lower-income households.

There are five different levels of monthly allowances for dependent children, depending on the family's reference income. This reference income is determined by dividing the family's annual gross income, including vacation and Christmas allowances, by the number of dependent children plus one.

Monthly social benefits per child are as follows (in 2024 the social benefit paid to already receiving beneficiaries are the same as below; for beneficiaries applying in 2024 the brackets considered are estimated according to the 2023 social benefits index, i.e., EUR 480.43):

- Level 1: Families whose reference income is under 50% of 14 times the reference value (i.e., under EUR 3 102.40).
- Level 2: Families whose reference income is under 50% and under 100% of 14 times the reference value (i.e., over EUR 3 102.40 and under EUR 6 204.80).
- Level 3: Families whose reference income is over 100% and under 170% of 14 times the reference value (i.e., over EUR 6 204.80 and under EUR 10 548.16).
- Level 4: Families whose reference income is over 170% (i.e., over EUR 10 548.16 and under EUR 15 512.00).
- Level 5: Families whose reference income is over 250% (i.e., over EUR 15 512.00).

Each level is also divided according to the age of the dependent child. Benefits are higher during the first 12 months of a child's life.

Monthly social benefits per child are as follows:

	Child under 36 months	Additional benefit per child under 36 months in a family with 2 children	Additional benefit per child under 36 months in a family with 3 or more children	Child over 36 months and under 72 months old	Child over 72 months old
Level 1	183.03	62.25	102.51	72	72
Level 2	154.92	55.24	88.47	72	72
Level 3	126.57	52.09	82.18	56.86	52.09
Level 4	84.75	37.69	53.38	42.91	-
Level 5	-	-	-	-	-

There is an additional EUR 50 monthly guarantee for children over 36 months and under 18 years old in risk of extreme poverty.

Monthly social benefits per child in a single-parent family are increased between 35% and 50% depending on income level.

In September, families with dependent school children aged between 6- and 16-years receiving child benefits in level 1 receive an additional amount equal to the regular monthly benefit.

An amount equal to the cash benefits for dependent children under 12 months is attributed for each unborn child after the first month following that of the 13th week of gestation.

### ***Benefits for handicapped dependent children***

There is also a special family allowance scheme for handicapped children.

The above cash benefits (in Sections on Benefits for dependent children and Benefits for handicapped dependent children) are not taxable.

## **Main Changes in tax/benefit systems since 2006**

- The relief for disabled taxpayers was restructured. Former partial exemptions and allowances were replaced by tax credits.
- Tax credits for higher income households were limited or abolished.
- The fiscal autonomy of local authorities (municipalities) increased. They may set the level of their share in the revenue from personal income tax, up to 5% of their resident taxpayers' tax liability. If this rate is set below 5%, the difference will be credited against the taxpayers' tax liability.
- Tax credits for handicapped taxpayers and dependants were increased.
- Social benefits for dependent children were increased for low-income families, single-parent families and families with 2 or more children.
- Introduction of social benefits for unborn children.
- A family coefficient was introduced in 2015 and abolished in 2016.
- From 2016, the tax unit is the individual. However, couples can opt for joint taxation.

## **Memorandum Items**

### ***Method used to identify and compute gross wages of the average worker.***

The operative concept of monthly compensation is that of amounts paid to full time staff before deductions for tax and compulsory contributions. It therefore includes wages and basic salaries of staff paid by the hour, by the job, or by tasks; benefits in kind or housing, if they are considered an integral part of compensation; cash subsidies for meals, housing, or transport; bonuses for regular night shifts and seniority, as well as incentive pay and rewards for diligence and productivity; family allowances, compensation for overtime and work on holidays. Benefits, subsidies and bonuses are taken into account only if paid regularly at each pay period.

Payments in kind are incorporated into the concept of compensation. The statistics record such advantages in kind at their taxable value.

All managerial and supervisory workers are included in the computations.

Average annual pay is based on the average of monthly earnings for April and October multiplied by an adjustment coefficient representing the share of annual bonuses and allowances (including vacation subsidies and the Christmas allowance), which is provided by the labour cost survey.

The following formula is applied:

- Average annual pay = Average monthly pay adjusted by the coefficient x 12.

***Description of the employer's main contributions to private retirement, health insurance schemes, etc.***

Outside the social security system, employers are required to insure their employees against work-related accidents (with private insurance companies). They may also provide their employees with life insurance, although this is optional.

## 2024 Parameter values

	Gen_exp_ded	250		
	Mult_1	2.6		
	Mult_2	1.35		

\*€4104 corresponds to the specific deduction and €250 correspond to the maximum deduction for general expenses; maximum value is the difference between gross income and specific deductions.

## 2024 Tax equations

The equations for the Portuguese system in 2024 are calculated on individual basis. Couples can opt for joint taxation based on the income-splitting system. In the Taxing Wages calculations, the two systems are modelled and the most favourable system is chosen.

The functions which are used in the equations (Taper, MIN, Tax etc) are described in the technical note about tax equations. Variable names are defined in the table of parameters above, within the equations table, or are the standard variables “married” and “children”. A reference to a variable with the affix “\_total” indicates the sum of the relevant variable values for the principal and spouse. And the affixes “\_princ” and “\_spouse” indicate the value for the principal and spouse, respectively. Equations for a single person are as shown for the principal, with “\_spouse” values taken as 0.

Key to range of equation B calculated separately for both principal earner and spouse P calculated for principal only (value taken as 0 for spouse calculation) J calculated once only on a joint basis.

# Slovak Republic

---

This chapter includes data on the income taxes paid by workers, their social security contributions, the family benefits they receive in the form of cash transfers as well as the social security contributions and payroll taxes paid by their employers. Results reported include the marginal and average tax burden for eight different family types.

Methodological information is available for personal income tax systems, compulsory social security contributions to schemes operated within the government sector, universal cash transfers as well as recent changes in the tax/benefit system. The methodology also includes the parameter values and tax equations underlying the data.

On 1 January 2009 Slovakia joined the Euro zone; the national currency became the Euro (EUR). In 2024, EUR 0.92 was equal to USD 1. In that year, the average worker earned EUR 18 529 (Secretariat estimate).

## Personal Income Tax System

### Central government income taxes

#### *Tax unit*

The tax unit is the individual.

#### *Tax allowances and tax credits*

##### **Standard reliefs**

- **Basic relief:** An allowance for all taxpayers is set at 21 times the minimum living standard (MLS) for a basic adult as of January 1, 2024 (EUR 5 646.48). In 2024, the basic personal allowance for taxpayers with gross earnings net of employee social security contributions in excess of the threshold of EUR 24 952.06 per year ( $24\,952.06 = 92.8 \times \text{MLS}$ , which is approximately equal to an employee's monthly gross wage of EUR 2 401) is gradually withdrawn. If gross earnings net of employee social security contributions exceeds EUR 24 952.06, the personal allowance is calculated as 44.2 times the minimum living standard minus 0.25 times gross earnings net of employee social security contributions. The basic personal allowance reaches 0 if the gross earnings net of employee social security contributions amount to EUR 47 537.98 per year (employee's monthly gross wage of approximately EUR 4 574). The value of the basic tax allowance cannot become negative.
- The regressive tax allowance is taken into account only once a year (when the tax return is filed or when the annual clearing is performed). Monthly tax prepayments during the year are therefore not affected.
- **Marital status relief:** An additional allowance is given to the principal earner in respect of a spouse living in a common household if the spouse earns no more than EUR 5 162.50. As from January 1, 2008, the value of the spouse allowance depends on the gross earnings net of employee social security contributions of both the principal and the spouse. As of 2013, to be entitled to the spouse allowance one of the following conditions should be met:
  - spouse is taking care of (not necessarily personally) children up to 3 years (or up to 6 years if the child is disabled) or
  - spouse is unemployed or
  - spouse is receiving nursing allowance or
  - spouse is disabled.

If the principal's gross earnings net of employee social security contributions in 2024 are lower or equal to EUR 47 537.98 ( $= 176.8 \times \text{MLS}$ ) and the spouse's gross earnings net of employee social security contributions are lower than EUR 5 162.50, the spouse allowance is calculated as the difference between 19.2 times MLS and the spouse's gross earnings net of employee social security contributions. If the gross earnings net of employee social security contributions of the spouse exceeds EUR 5 162.50, the spouse allowance is 0. If the principal's gross earnings net of employee social security contributions exceeds EUR 47 537.98 ( $= 176.8 \times \text{MLS}$ ), the spouse allowance is calculated as 63.4 times MLS minus 0.25 times the principal's gross earnings net of employee social security contributions. This amount is reduced by the spouse's gross earnings net of employee social security contributions. The value of the spouse allowance cannot become negative.

The digressive tax allowance is taken into account only once a year (when the tax return is filed or when the annual clearing is performed). Monthly tax prepayments during the year are therefore not affected.

**For the purposes of this Report**, only families with an unemployed spouse are entitled to the spouse allowance (spouse income does not influence any equations of the spouse allowance as of 2013). Childcare up to 3 years does not affect the calculation of tax wedges as according to the *Taxing wages* methodology any children in the household are assumed to be aged between six and eleven inclusive.

- Relief for children: The prior allowance for children has been replaced by a non-wastable tax credit as from January 2004. As from July 2007, the monthly tax credit is automatically indexed by MLS growth as of 1st July when also the new amount of MLS comes into force. Since 2015 the monthly tax credit is automatically indexed on January 1 by the MLS growth from the previous year. Monthly tax credit in 2022 is EUR 23.57 per child for the whole year. The annual amount will be EUR 282.84. The tax credit for each dependent child is deducted from the tax liability; if the credit exceeds the tax liability, the excess will be paid to the taxpayer. To receive this credit, the parent must annually earn at least 6 times the minimum monthly wage, which for 2022 is set at EUR 646.00 (the total annual earnings must therefore be at least EUR 3 876.00). The credit can be taken only by one partner. It can be taken by one partner for a part of the tax period (year) and by the other partner for the rest of the tax period (year); this choice will have to hold for all dependent children. (For the purposes of this Report, it is assumed that the credit is claimed by the principal wage earner).
- Since 2019, the tax credit on dependent children is doubled for each child below the age of 6 years.
- Since January 2022, 1.85-times the basic value of the tax credit is provided for children aged 6 to 15 years ( $1.85 \times 23.57 = \text{EUR } 43.60$  in 2022). This follows an earlier increase to 1.7 times the basic value valid in July-December 2021.
- Since July 2022, a new system of the tax credit on dependent children has been introduced with a monthly fixed values of EUR 70 for children below the age of 15 years and EUR 40 for children aged 15 and more years. The eligibility condition of income at least 6 times the minimum wage has been abolished. Instead, the credit amount is capped at a given percentage of the partial tax base (= gross income net of employee social security contributions) based on the number of children in the following amount:

Number of dependent children	Cap as % of the partial tax base
1	20 %
2	27 %
3	34 %
4	41 %
5	48 %
6 and more	55 %

- Only for the second half of 2022, 50% of the partial tax base enters the calculation of the tax credit cap. Due to legislative reasons, both the old and the new system of the tax credit are in force in July-December 2022 and the taxpayer claims whichever value is higher for them. As of January 2023, only the new system will be in force.
- As of January 2023, the annual indexation of the child tax credit is abolished. Instead, the amounts are temporarily increased in years 2023 and 2024 to EUR 140 for children younger than 18 years and to EUR 50 for children aged 18 years or older. From 2025, the higher amount is set at a new permanent level of EUR 100 and the age threshold is set at 15 years.
- Since 2023, when filing the annual tax return, the principal earner can add the partial tax base of their spouse to their own tax base for the purpose of the calculation of the cap on the child tax credit.
- Relief for social and health security contributions: Employee's social security contributions (see Section 0n Employees' contributions) are deductible for income tax purposes.

### Main non-standard tax reliefs applicable to an average wage worker

Supplementary pension insurance, special-purpose savings and life insurances was repealed as from January 2011. As of 2014 an allowance for supplementary pension insurance has been reintroduced. Supplementary pension contributions are tax-deductible up to the maximum limit of EUR 180 per year.

In 2018, a tax allowance for spa treatment was introduced. Each taxpayer can deduct up to EUR 50 per year per each member of the family (the principal earner, the spouse and their children) for expenses on domestic spa services. The allowance was abolished in 2021.

### Non-wastable tax credit: employee tax credit (ETC / *zamestnanecká prémie*)

Prior to 2015 low-income workers were eligible for employee tax credit. The employee tax credit was effective since 2009 and depended on the employee's earnings and the number of months worked. In order to receive the employee tax credit, earnings should be at least 6 times of the minimum wage. The credit was then calculated as 19% of the difference between the basic allowance and the tax base (gross earnings net of employee SSC) calculated from 12 times the minimum wage or from the actual income (whichever is higher). In 2024 the partial tax base at the level of the minimum wage (EUR 7 794) is higher than the basic allowance (EUR 5 646.48). The tax credit is therefore automatically zero (so effectively nobody can be eligible).

### Tax schedule

As from 2013 the previous flat tax rate of 19% was replaced by a new tax schedule with two tax brackets. The ceiling for the first bracket is set out as 176.8 times MLS (equal to EUR 47 537.98 in 2024), which secures its automatic indexation. The tax schedule is as follows:

Annual taxable income (EUR)*	Rate (%)
0 – 47 537.98	19
47 537.99 and over	25

\* Employee's social security contributions (see 1.12.) are deductible for income tax purposes.

### State and local income tax

Personal income tax (PIT) is redirected solely to the local governments. The share of PIT yield which is transferred to municipalities is 70%. The share of PIT yield transferred to self-governing regions is 30%.

## Compulsory Social Security Contributions to Schemes Operated within the Government Sector

### Employees' contributions

Compulsory contributions of 13.4% of gross wages and salaries are paid by all employees into government operated schemes. The total is made up as follows:

– Health Insurance		4.0%
– Social Insurance		9.4%
of which:		
– Sickness	1.4%	
– Retirement	4.0%	
– Disability	3.0%	

– Unemployment	1.0%	
----------------	------	--

There are maximum assessment bases MSSAB (maximum threshold for contributions to apply) that apply to social security contributions. From 2004 these MSSAB are no longer fixed values but depend upon the average wages (AW). As of 2013 formulae for calculation of all maximum assessment bases have been unified. Since 2017, the MSSAB for health insurance contributions are abolished. As of 2017, the monthly MSSAB for social insurance contributions are calculated as:  $7 \times AW(t-2)$ , where  $AW(t-2)$  is the average wage two years ago (previous equation for calculating the MSSAB was  $5 \times AW(t-2)$ ). The average wage (AW) is determined by the Statistical Office of the Slovak Republic – for 2024 the monthly AW from 2022 of EUR 1 304 was relevant.

In 2015, the health insurance contribution (HIC) allowance was introduced. The allowance decreases the employee's and employer's assessment base for the health insurance. It amounts to EUR 380 per month (EUR 4 560 annually) and decreases with rising income up to EUR 570 (EUR 6 840 annually) when it reaches zero. With EUR 1 rise in the monthly income the monthly allowance is reduced by EUR 2. The HIC allowance is applicable only on standard employment income (not self-employed income or income based on temporary contracts). However, to determine the amount of allowance all types of incomes are assessed, to target only low income workers. In 2018, the HIC allowance for employers was abolished.

In 2023, the social insurance contribution (SIC) allowance was introduced for seasonal workers. The allowance decreases the employee's and employer's assessment base on retirement and unemployment insurance. It amounts to 50 % of the average wage in the economy two years prior. In 2024, it amounts to EUR 652.00 (EUR 1 304,00 x 50 %). According to the *Taxing wages* methodology, this SIC allowance is not present in the computations, as only seasonal workers can benefit from it and it does not impact full-time employees, who are assumed to be the taxpayers in the context of this methodology.

In 2023 the minimum HIC for employees was introduced, set at 14 % of the MLS per employee. In 2024, the minimum HIC was temporarily increased to 15 % of the MLS together with increasing employer's HIC resulting in the minimum HIC of EUR 40.32 (MLS EUR 268.88 x 14 %). The employer's HIC is not affected by the introduction of the minimum HIC for employees. The difference between the HIC paid (employee and employer) and the minimum HIC is to be paid by the employee.

### ***Employers' contributions***

The total contribution for employers is temporarily increased from 35.2 % to 36.2% of gross wages and salaries for the years 2024 to 2027. The contribution comprises the health insurance contribution (temporarily increased from 10% to 11 % of gross wages and salaries) and the social insurance contribution (25.2%). The social insurance rate reflects contributions to sickness insurance (1.4%), disability insurance (3%), retirement insurance (14%), the Guaranteed Fund (0.25%), accident insurance (0.8%), for unemployment (1%) and to the Reserve Fund (4.75%). All contributions are rounded down to two decimal places.

Since 2022, the unemployment insurance has been reduced to 0.5% and a new type of insurance contribution for the financing of short-time work support with the rate 0.5% has been introduced.

In 2024, the HIC have been temporarily increased by 1 percentage point up to 15 %. This increase is fully transposed into employer's HIC, which have increased from 10 % up to 11 %. This measure is in force until the end of 2027.

Since January 2005, Slovakia has introduced the privately managed fully funded pillar. This means that a given proportion (9 percentage points) of social contributions paid by the employer for retirement insurance flew directly to the private pension funds and not to the Social Insurance Agency as in the previous years. As from September 2012 the pension sharing scheme has been changed. The employer's retirement contribution rate to the fully funded pillar has been reduced from 9% to 4% (for more see pension

contribution sharing scheme table below). As from 2017 the contribution rate to the II. pillar automatically increases by 0.25 p.p. per year (i.e., contribution rate to the I. pillar decreases in the same volume). Years 2022 and 2023 had a scheduled 5.50 % contribution rate to the II. pillar (i.e., contribution rate to the I. pillar is 8.50 %). Since 2024 the contribution rate to the II. Pillar has been set to 4 % (i.e., contribution rate to the I. pillar is 10 %).

Private pension funds are treated outside of the general government; these contributions are therefore not taken into account in the calculations of the average and marginal tax rates. For the purposes of this Report, the total contribution rate for employers in 2024 is 32.2 % with contributions to the second pension pillar not included in the rate.

In 2015 the health insurance contribution (HIC) allowance was introduced and in 2018 it was abolished for employers, while for employees it remains unchanged (for more see 2.1). In 2023, the social insurance contribution (SIC) allowance for seasonal workers was introduced.

The MSSAB also applies to the employer's SSC. The next table presents the annual values of MSSAB:

	Formula for MSSAB	Value of MSSAB
Health insurance		No limit
Social insurance		
of which		
-- sickness, retirement, unemployment, short-time work support, disability, Guarantee fund, Reserve fund	7.0 x AW (t-2)	109 536.00
-- accident		No limit

#### Social security contributions: Pension – contribution sharing in case of II. Pillar participation

Period	Percentage of gross earnings		
	I Pillar	II Pillar	Total
System up to September 2012	9% (5% employer + 4% employee contribution)	9% (employer contribution)	18%
System up to December 2016	14% (10% employer + 4% employee contribution)	4% (employer contribution)	18%
System up to December 2017	13.75% (9.75% employer + 4% employee contribution)	4.25% (employer contribution)	18%
System up to December 2018	13.5% (9.5% employer + 4% employee contribution)	4.5% (employer contribution)	18%
System up to December 2019	13.25% (9.25% employer + 4% employee contribution)	4.75% (employer contribution)	18%
System up to December 2020	13% (9% employer + 4% employee contribution)	5% (employer contribution)	18%
System up to December 2021	12.75% (8.75% employer + 4% employee contribution)	5.25% (employer contribution)	18%
System up to December 2023	12.5% (8.5% employer + 4% employee contribution)	5.5% (employer contribution)	18%
Current system (2022-2023)	14% (10% employer + 4% employee contribution)	4% (employer contribution)	18%

## Universal Cash Transfers

### *Transfers related to marital status*

None.

### **Transfers for dependent children**

The central government pays a benefit for each dependent child in the amount of EUR 60.00 per month in 2024. In January 2008 a benefit surcharge for dependent children whose parents are not eligible for the non-wastable child tax credit was introduced. The monthly amount of this benefit is EUR 30.00 in 2024. For the purpose of the tax wedge calculations this benefit is not relevant, as only non-workers are entitled to the surcharge.

The non-wastable tax credit mentioned in Section on Standard reliefs is part of the social support for families with dependent children. However, it is not considered as a transfer for the purposes of this Report.

### **Transfers related to social status**

To determine the claim to state social benefits (for example the allowance for housing costs), the minimum living standard amounts are relevant as they form the basis of the income test. The MLS amounts are indexed on 1 July. For 2024, these amounts are:

	MLS monthly (1.7.2023 – 30.6.2024)	MLS monthly (1.7.2024 – 30.6.2025)
First adult	268.88	273.99
Second adult	187.57	191.14
Child	122.77	125.11

A family is entitled to a social allowance if the total combined monthly disposable income of the family is less than the calculated MLS for this family. In the calculation of the benefit eligibility, only 75% of net income from employment is taken into account. The allowance varies with the family type.

The benefits available to a family in material need (valid for 2024) are:

- EUR 84.90 per month for an individual.
- EUR 161.40 per month for an individual with between one and four children.
- EUR 147.50 per month for a couple without children.
- EUR 220.70 per month for a couple with between one and four children.
- EUR 235.70 per month for an individual with more than four children.
- EUR 297.50 per month for a couple with more than four children.
- activation allowance: EUR 86.80 per month – for people who become active either by accepting qualifying employment opportunities or participating in retraining courses.
- housing allowance:
  - EUR 95.20 per month for individual in material need,
  - EUR 161.60 for a 2-person household in material need,
  - EUR 205.10 for a 3-person household in material need,
  - EUR 248.60 for a 4-person household in material need,
  - EUR 291.90 for a household in material need with more than 4 members.
- protection allowance: EUR 86.80 per month for an individual in material need who is unable to secure or increase their income by working due to such circumstances as disability, old age, taking care of a dependent person, pregnancy from the beginning of the eighth week before the expected day of delivery or being a lone parent of a child of no more than 1 year of age.
- dependent child allowance: EUR 23.70 per month for a child who properly fulfils compulsory school attendance.

The amounts are indexed on January 1 in line with the growth of the MLS on July 1 in the previous year.

## Main Changes in Tax/Benefit Systems since 2017

Automatic growth of the contribution rate to the II. pension pillar by 0.25 p.p. per year was introduced in 2017. The contribution rate to the I. pillar decreases by the same amount. The contribution rate increase for the years 2022 to 2027 has been modified as following:

- Years 2022 to 2024 have a scheduled 5.50 % contribution rate to the II. pillar (i.e. contribution rate to the I. pillar is 8.50 %).
- Years 2025 and 2026 have a scheduled 5.75 % contribution rate to the II. pillar (i.e. contribution rate to the I. pillar is 8.25 %).
- The contribution rate to the II. pillar will reach its considered peak of 6.00 % in 2027, leaving the I. pillar with the contribution rate of 8 %.

In 2024 the system was changed again and the contribution rate to the II. pillar was set to a new permanent level of 4 % with the contribution to the I. pillar being 10 % (see Section on Employers' contributions). Moreover, the MLS value was revised up in July 2017 after 4 years of no change, which led to changes in the tax system allowances, credits and brackets from January 2018. Since 2018 the HIC allowance for employers was abolished.

In 2018, there were also legislative changes which do not directly affect calculations of the tax wedge used in this Report. The first is a new spa tax allowance for the PIT. Each taxpayer is allowed to reduce their tax base by up to EUR 50 each for themselves, their spouse and children if they spent money on domestic spa services. The allowance was abolished in 2021.

The second change is related to support for housing mortgage interest payments for young people. Since 2018 taxpayers are allowed to deduct half of the mortgage interest payment (maximum amount is EUR 400 per year) from their own tax liability. Previously, support for housing was in the form of a public subsidy.

Third, pensioners who earn income from special short term labour contracts (*dohoda o vykonaní práce*) benefit from an SIC allowance of EUR 200 per month from July 2018.

New exemptions of the 13th and 14th salaries were introduced in 2018. This measure has a negative impact on revenues, which is increasing with gradual phasing of exemptions from health insurance contributions, the PIT, and from 2019 onwards also from social insurance contributions. Maximum exemption is EUR 500 per additional salary. Since 2021, the exemptions of the 13th and 14th salary are abolished.

Overview and timing of PIT and SSC exemptions of 13th and 14th salary (Y = exemption)									
	2018			2019			2020		
	SIC	HIC	PIT	SIC	HIC	PIT	SIC	HIC	PIT
13 <sup>th</sup> salary (June)		Y			Y	Y		Y	Y
14 <sup>th</sup> salary (December)		Y	Y	Y	Y	Y	Y	Y	Y

Since 2019, the tax credit on dependent children is doubled for each child below the age of 6 years (Section on Standard reliefs). In addition, an exemption for recreational vouchers was introduced. Employers can provide maximum EUR 275 per year as a cash benefit exempted from social security contributions and the PIT to employees who spent at least EUR 500 on recreation in the Slovak Republic. Provision of this benefit is compulsory for employers who have at least 50 employees.

The amount of the basic allowance was increased in 2020 from 19.2 times the MLS to 21 times the MLS. The threshold when the basic allowance is gradually withdrawn was adjusted accordingly from 100 times the MLS to 92.8 times the MLS.

Since July 2021, the child tax credit has been increased to 1.7-times the basic value for children aged 6 to 15 years. The multiple is set to increase to 1.85-times the basic value from January 2022.

Since July 2022, a new system of the tax credit on dependent children has been introduced with a monthly fixed values of EUR 70 for children below the age of 15 years and EUR 40 for children aged 15 and more years. The eligibility condition of income at least 6 times the minimum wage has been abolished. Instead, the credit amount is capped at a given percentage of the partial tax base (= gross income net of employee social security contributions) based on the number of children in the following amount:

Number of dependent children	Cap as % of the partial tax base
1	20 %
2	27 %
3	34 %
4	41 %
5	48 %
6 and more	55 %

Only for the second half of 2022, 50% of the partial tax base enters the calculation of the tax credit cap. Due to legislative reasons, both the old and the new system of the tax credit are in force in July-December 2022 and the tax payer claims whichever value is higher for them. As of January 2023, only the new system will be in force.

As of January 2023, the annual indexation of the child tax credit is abolished. Instead, the amounts are temporarily increased in years 2023 and 2024 to EUR 140 for children younger than 18 years and to EUR 50 for children aged 18 years or older. From 2025, the higher amount is set at a new permanent level of EUR 100 and the age threshold is set at 15 years.

Since 2023, the cap on the child tax credit is calculated using the sum of the partial tax bases of both the principal earner and the spouse.

The benefit for each dependent child has been increased as from July 2022 to EUR 30.00 and its annual indexation in line with the growth of the MLS has been abolished. The benefit increased to EUR 60.00 in January 2023.

As from March 2022, the employer social insurance contributions for financing of short-time work support of 0.5% of the assessment base and an equivalent reduction of the employer contribution rate for unemployment insurance from 1% to 0.5% were introduced.

In 2023, the social insurance contribution (SIC) allowance was introduced for seasonal workers. The allowance decreases the employee's and employer's assessment base on retirement and unemployment insurance. It amounts to 50 % of the average wage in the economy two years prior.

In 2023 the minimum HIC for employees was introduced, set at 14 % of the MLS per employee. The difference between the total HIC paid (employee and employer) and the minimum HIC is to be paid by the employee.

Since April 2023, the annual indexation of the MLS is done based only on the low-income inflation rate (i.e. the growth in the net disposable income per household member is no longer used).

Since 15 July 2023 the system of housing allowance, which is a part of material need assistance, was changed from using two levels – for single-person households and for households with more than one member – to using five distinct levels based on the number of household members (see Section on Transfers related to social status).

For the years 2024 to 2027 the employer's HIC was temporarily increased to 11 %. It is planned to return to the original 10 % since 2028.

## Memorandum items

### *Identification of AW and valuation of earnings*

The average earnings of the AW are estimated by the Ministry of Finance of the Slovak Republic based on the data provided by the Statistical Office of the Slovak Republic. The source of the information is the quarterly survey of employers which covers:

- all financial corporations and public sector organizations,
- around 50% of firms with at least 20 employees or firms with annual revenue at least €5 mil. regardless of the number of employees, and
- around 7% of firms with less than 20 employees

The average earnings are calculated as the mean of the monthly average wages in industry sectors B-N according to the SK NACE Rev. 2 classification, weighted by the number of employed in the given sector. The earnings data are not adjusted to full-time equivalents, but part-time workers are included only if they have a standard employment contract. Workers with non-standard temporary contracts<sup>1</sup> are excluded completely. Managerial workers are also included only if they have a standard employment contract. The self-employed are not included in the earnings data, but they are included in the sectoral employment figures.

## 2024 Tax equations

The functions which are used in the equations (Taper, MIN, Tax etc) are described in the technical note about tax equations. Variable names are defined in the table of parameters above, within the equations table, or are the standard variables “married” and “children”. A reference to a variable with the affix “\_total” indicates the sum of the relevant variable values for the principal and spouse. And the affixes “\_princ” and “\_sp” indicate the value for the principal and spouse, respectively. Equations for a single person are as shown for the principal, with “\_sp” values taken as 0.

	Line in country table and intermediate steps	Variable name	Range	Equation
1.	Earnings	earn		
2.	Allowances:			
	Basic	basic_allce	B	IF(earn-SSC<=basic_al_mult1*basic_adult, basic_al,MAXA(basic_al_mult2*basic_adult-basic_al_redn*(earn-SSC),0))
	Spouse	spouse_allce	P	IF(earn_spouse=0,1,0)*Married*Positive(IF(earn_princ-SSC_princ<=spouse_al_mult1*basic_adult, spouse_al_mult*basic_adult,spouse_al_mult2*basic_adult-spouse_al_redn*(earn_princ-SSC_princ)))
	Social security contributions	SSC_al	B	SSC
	Total	tax_al	B	basic_allce+spouse_allce+SSC_al
3.	Credits in taxable income	taxbl_cr	B	0
4.	CG taxable income	tax_inc	B	Positive(earn-tax_al)
5.	CG tax before credits	CG_tax_excl	B	Tax(tax_inc,tax_sch)
6.	Tax credits:			
	Employee tax credit	etc_cr	B	IF(earn>=min_wage*minwage_mult, tax_rate*Positive(basic_al-MAX(etc_thresh, earn-SSC)), 0)
	Children	child_cr	P	IF(Children>0;MIN(Children*tax_cr1;MIN(tax_cr_lim6;tax_cr_lim1+Children*tax_cr_lim2)*(SUM(tax_inc_princ;tax_inc_spouse)-SUM(SSC_al_princ;SSC_al_spouse)));0)
	Total	tax_cr	B	etc_cr+child_cr
7.	CG tax	CG_tax	B	CG_tax_excl-tax_cr
8.	State and local taxes	local_tax	B	0
9.	Employees' soc security	SSC	B	(earn>0)*(MINA(earn;MSSAB)*SSC_rate+IF(MAX(0;(-MAX(0;HIC_thresh-MAX(0;(earn-HIC_thresh)*HIC_rate))))*SSC_health+earn*SSC_emphealth<basic_adult*SUM(SSC_health;SSC_emphealth)*12;basic_adult*SUM(SSC_health;SSC_emphealth)*12-earn*SSC_emphealth;MAX(0;(earn-MAX(0;HIC_thresh-MAX(0;(earn-HIC_thresh)*HIC_rate))))*SSC_health))
11.	Cash transfers	cash_trans	J	=Children*transf_1+@Positive(IF(0,75*((earn-SSC-CG_tax_excl)/12)<BA8;((1-Married)*(IF(Children>0;transf_indiv_child;transf_indiv))+Married*(IF(Children>0;transf_couple_child;transf_couple))+IF((Married+Children)>3;transf_hous_5person;SWITCH((Married+Children);0;transf_hous_indiv;1;transf_hous_couple;2;transf_hous_3person;3;transf_hous_4person)))+(Children*transf_dep)-0,75*(earn-SSC-CG_tax_excl)/12);0))
13.	Employer's soc security	SSC_empr	B	MINA(earn,MSSAB)*SSC_empr+earn*SSC_acc+earn*SSC_emphealth

Key to range of equation B calculated separately for both principal earner and spouse P calculated for principal only (value taken as 0 for spouse calculation) J calculated once only on a joint basis.

**Note**

<sup>1</sup> Agreements on work performed outside employment relationship - *Dohody o prácach vykonávaných mimo pracovného pomeru*.

# Slovenia

---

This chapter includes data on the income taxes paid by workers, their social security contributions, the family benefits they receive in the form of cash transfers as well as the social security contributions and payroll taxes paid by their employers. Results reported include the marginal and average tax burden for eight different family types.

Methodological information is available for personal income tax systems, compulsory social security contributions to schemes operated within the government sector, universal cash transfers as well as recent changes in the tax/benefit system. The methodology also includes the parameter values and tax equations underlying the data.

The Slovenian currency is the euro (EUR). In 2024, EUR 0.92 was equal to USD 1. In that year, the average worker in Slovenia earned EUR 27 756 (Secretariat estimate).

## Personal income tax system

### Central government income tax

#### *Tax unit*

The tax unit is the individual.

#### *Tax allowances*

##### **Standard tax reliefs**

- A general (basic) allowance of EUR 5 000.00 is deductible from income in 2024. For lower income groups whose taxable income equals up to EUR 16 000.00 an additional general allowance is determined linearly by the following equation:  $18\,761.40 - 1.17259 \times \text{total income}$ .
- Family allowances are also deductible from the tax base in the same way as for the general allowance. The allowances for 2024 are as follows:
  - EUR 2 698.00 for the first dependent child,
  - EUR 2 933.00 for the second child,
  - EUR 4 892.00 for the third child,
  - EUR 6 851.00 for the fourth child,
  - EUR 8 810.00 for the fifth child,
  - for the sixth and all additional dependent children the allowance is higher by EUR 1 959.00 relating to the amount of allowance for the preceding maintained children,
  - EUR 9 777.00 for a dependent child who requires special care,
  - EUR 2 698.00 for any other dependent family member.
- Relief for social security contributions: Employee's compulsory contributions for the social insurance system are deductible for income tax purposes.
- Tax credits: None for employees.

##### **Non-standard tax reliefs applicable to income from employment**

- Additional voluntary pension insurance premiums: Premiums paid by a resident to the provider of a pension plan based in Slovenia or in another EU Member State according to a pension plan that is approved and entered into a special register in accordance with the pension legislation are deductible from taxable income. In 2024 such deductions are subject to an annual limit of EUR 2 903.66 or a sum equal to 24% of the employee's contribution for compulsory pension and disability insurance if that is a lower figure.
- Reimbursement of expenses associated with work, such as in-work meals, transport to and from work, in-the-field supplements (per diem when an employee works outside his or her working place) and compensation for being away from home are exempt subject to statutory conditions and upper limits.

- Reimbursement of expenses associated with business travel such as: per diem allowances, transport costs (including the use of the employee's private vehicle for work purposes), and the costs of overnight accommodation, are exempt subject to statutory conditions and upper limits.
- The cost of purchasing and maintaining uniforms and personal protection work equipment defined in special regulations is exempt from income tax.
- Compensation for the use of an employee's own tools and other equipment (except private vehicles) necessary for the performance of work at the workplace, is exempt up to a level of 2% of the monthly wage or salary of the employee, subject to an upper limit of 2% of the average gross monthly wage (AGMW).
- Long service bonuses, severance pay upon retirement and payments related to accidents, long term sickness and other unexpected events are exempt subject to statutory conditions and upper limits.
- Severance pay on redundancy is exempt subject to an upper limit of ten times the AGMW.
- Compensation for the use of an employee's own possessions and property when working at home in accordance with statutory regulations is exempt up to a level of 5% of the monthly wage or salary of the employee, subject to an upper limit of 5% of the AGMW.
- The reduction of PIT on the part of a salary paid on the basis of business performance. The income paid on the basis of business performance is exempt from the taxable base of employment income (but not from social security contributions) up to an amount corresponding to 100% of the last published average monthly salary in the Republic of Slovenia. 'The part of a salary paid on the basis of business performance' is defined as income which should be paid once in a calendar year to all eligible employees at the same time, and under the condition that the right to receive such income is provided:
  - in the employer's general legal acts, with the same eligibility conditions for all employees; or
  - in the collective labour agreement including or serving as basis for eligibility criteria for receiving such income.
- The exemption of PIT on the payment for holiday leave up to 100% of the latest known average monthly wage in the Republic of Slovenia.
- Young people up to the age of 29 are granted a special allowance of EUR1 300 per year on income from employment.

### *Tax schedule*

The tax schedule for 2024 is as follows:

Taxable income (EUR)	Tax rate (in %)
Up to 8 755.00	16
8 755.00–25 750.00	26
25 750.00–51 500.00	33
51 500.00–74 160.00	39
Above 74 160.00	50

### ***Regional and local income tax***

There are no regional or local income taxes.

## Compulsory social security insurance system

The compulsory social security insurance system consists of four schemes as follows:

- pension and disability insurance,
- health insurance,
- unemployment insurance,
- parental leave insurance.

### ***Employees' contributions***

The taxable base for social security insurance contributions paid by employees is the total amount of the gross wage or salary including vacation payments, fringe benefits and remuneration of expenses related to work above a certain threshold. The assessment period is the calendar month. Employees contribute an amount as a percentage of their remuneration as follows:

Scheme name	Rate of contribution (%)
Pension insurance	15.50
Health insurance	6.36
Unemployment insurance	0.14
Parental leave insurance	0.10
Total	22.10

Additionally to health insurance, from 1 January 2024 employees pay a compulsory health contribution of EUR 35 per month. This contribution replaced voluntary additional health insurance that was abolished.

### ***Employers' contributions***

Social security insurance contributions are also paid by employers on behalf of their employees. The taxable base and the assessment period are the same as for employees' contributions. The employers' contribution rates are as follows:

Scheme name	Rate of contribution (%)
Pension insurance	8.85
Health insurance	7.09
Unemployment insurance	0.06
Parental leave insurance	0.1
Total	16.1

Slovenia implements a minimum SSC base for workers earning less than a minimum income threshold. For gross earnings below the minimum income threshold, SSCs are calculated on the basis of the minimum SSC base and not on actual gross wage earnings. Employees are liable to pay employee SSCs on their actual gross earnings, however, the employers are liable to pay (in addition to the employer SSC on gross earnings) the employee *and* employer SSC rate on the gross wage earnings below the minimum income threshold.

## Payroll tax

None.

## Universal cash transfers

### *Transfers related to marital status*

None.

### *Transfers for dependent children*

On 1 January 2012 the Exercise of Rights to Public Funds Act (ZUPJS-A) entered into force. Regarding to a new act child allowance is a supplementary benefit for maintenance, care, and education of children when the family income per family member does not exceed statutorily defined percentage of the average net wage in the previous year.

The new legislation changed relevant family income which is the basis for the income classes from gross family income to net family income. Income includes taxable income and non-taxable income defined by the Personal Income Tax Act as for instance social benefits. Income is defined as gross income plus social benefits received but excluding the normalized cost and actual cost recognized under the law governing income tax, taxes and mandatory social security contributions levied on such income.

The new legislation also reduced the age of a child's entitlement. The right to a child benefit is held only until the child reaches 18 years. Besides, the child benefit is higher for eligible students included in higher secondary education (aged less than 18 years and with an income per family member below the average net wage).

Applications for the benefit are made on an annual basis and the payments are not taxable.

- The amount of the benefit is calculated for each child separately according to the level of net family income per family member and the ranking of the child in the family. Each family is assigned to one of 8 income brackets. From 1 January 2018 the thresholds between brackets are defined in nominal terms whereas before that date the brackets were defined according to some percentage of the previous year average net wage.
- Each child is allocated in one of three ranking levels (the level of payments increases with the ranking level - the lowest for the first child, higher for the second child and the highest for the third and any subsequent child). When a child lives in a one-parent family, the amount of the allowance is increased by 30%. When a pre-school child does not attend kindergarten, the amount of the allowance is increased by 20%.
- The details for the calculation of the net income per family member have been prescribed by the Minister, as follows:
  - All income and receipts, namely net disposable income (after deduction of the normalized cost and actual cost recognized under the law governing income tax, taxes and mandatory social security contributions levied on such income) are taken into account, except those that are designed to cover the specific needs (such as allowance and attendance allowance, a large family, etc.). Property is also taken into account like immovable property, cars and other vehicles, watercraft, etc. Property is assigned a value and then it is calculated the amount of interest that would be received within one year from the value of assets deposited in a bank account in the form of time deposits.
- The monthly amounts of transfers for a child from birth to the end of primary school in a two-parent family according to the Exercise of Rights to Public Funds Act and Public Finance Balance Act for the year 2024 are as follows:

Number of income bracket	Net family income per family member (above – to)	1st Child	2nd Child	3rd and subsequent Child
		Monthly (EUR)	Monthly (EUR)	Monthly (EUR)
1	Up to 2 769.24	141.13	155.23	169.36
2	2 769.24 – 4 615.44	120.65	133.38	146.03
3	4 615.44 – 5 538.60	91.96	102.78	113.57
4	5 538.60 – 6 461.64	72.53	82.76	93.18
5	6 461.64 – 8 154.24	59.30	69.21	79.05
6	8 154.24 – 9 846.24	37.58	47.03	56.43
7	9 846.24 – 12 615.84	28.20	37.58	47.03
8	12 615.84 – 15 231.00	24.55	33.95	43.34

- The monthly amounts of child benefit for a child included in the secondary school (but only for the child younger than 18) in the income brackets 7 and 8 are different than those in the table above and are as follows:

Number of income bracket	Net family income per family member (above – to)	Monthly (EUR)	Monthly (EUR)	Monthly (EUR)
7	9 846.24 – 12 615.84	35.59	44.98	61.29
8	12 615.84 – 15 231.00	28.25	37.65	49.24

In 2024, the maximum annual benefit levels for children in a two-parent family till the end of primary school are set by:

- EUR 1 693.56 for the first child,
- EUR 1 862.76 for the second child,
- EUR 2 032.32 for the third or subsequent child.

The amounts decline as the level of income per family member increases.

## Main changes in tax/benefit system since 2005

- In 2006 the taxation of income of individuals changed from global tax to a kind of a dual income tax system. Active income (from employment, business, basic agriculture and forestry, rents, royalties and other income) is taxed aggregated at progressive rates and taking into account the allowances and deductions; capital income (interest, dividends and capital gains) is taxed at proportionate rates on a scheduler basis.
- In 2007 the number of income tax brackets was reduced from five to three. At the same time, some non-standard tax reliefs for certain expenses and for interest paid on loans for housing were abolished.
- In 2008 additional general allowances were introduced for people on low incomes.
- The payroll tax was phased out at the start of 2009.
- The Exercise of Rights to Public Funds Act entered into force on 1 January 2012 changes family income which is the basis for the income classes from gross family income to net family income, which also includes social benefits received.
- Regarding to the Public Finance Balance Act which entered into force on 1 June 2012, the amounts of transfers for children in fifth- and sixth-income classes are reduced for 10%. Transfers for children in the seventh- and eighth-income classes are abolished.

- In 2013 the second bracket in the PIT schedule was broadened according to the Public Finance Balance Act. For the years 2013 and 2014 also the threshold for the third bracket (with the rate 41%) was increased and a new, top bracket with a rate of 50% was introduced for incomes above EUR 70 907.20.
- For the year 2013 the special relief for students was reduced by 25% compared to the tax relief in 2012 (the tax relief for 2014 amounts to EUR 2 477.03).
- Concerning rental income deriving renting of immovable and movable property a new scheduler principle of taxation was introduced in the year 2013 with proportional rate of 25%. The standardised costs were reduced from 40% to 10% of the rental income.
- The main and most important substantive change for the year 2014 and beyond eliminates the automatic adjustment of tax credits and net annual tax basis in the scale for assessing personal income tax with the growth in consumer prices.
- For the year 2014 another amendments were also introduced to the personal income tax, that is the abolishment of the tax benefits to certain groups of taxpayers (special relief for daily migrants, relief for the residents over 65 years of age).
- In 2014, the amendments to the Law on Parenthood and Family Incomes increased child benefit for each child who lives in a single-parent family. Namely, the uplift of child benefit was increased from 10 to 30%. In this year were also introduced the different amounts of transfers for children included in the secondary school in the sixth income bracket.
- The scale of assessment for income tax as a temporary measure that applies to 2013 and 2014, with the addition of a fourth-class tax rate of 50% was extended for the year 2015.
- In 2015 the annual threshold between 2nd and 3rd tax bracket (above which the income tax is paid at the rate of 41%) was increased to EUR 20 400 (from EUR 18 960) for the years 2016 and 2017. The corresponding tax rate remained unchanged (i.e., 27%). The validity of the tax rate of 50% for the fourth tax bracket (for incomes above EUR 70 907) is extended also for tax years 2016 and 2017.
- In 2016 for the year 2017 the additional tax bracket between previous second and third tax brackets with the rate of 34% has been introduced, and the second highest tax rate has been lowered from 41% to 39%. The highest rate of 50 %, which used to be a temporary measure, has been maintained. The threshold for the additional basic allowance has been increased from EUR 10 866 to EUR 11 166.
- In 2016 and valid from 2017 the reduced taxation on performance bonuses (13th salary) was introduced meaning that salary paid on the basis of business performance is exempt from the income tax up to 70% of the average wage.
- From 2018 the additional general tax allowance for incomes between EUR 11 166.67 and EUR 13 316.83 is determined linearly.
- From 2018 the PIT exemption for the income paid as a reward for the business performance was increased from 70% to 100% of the latest known average monthly wage in the Republic of Slovenia.
- From 2018 the thresholds of the income brackets used for the calculation of child benefits are defined nominally; before that the thresholds were defined as percentage of the previous year average net wage. In addition, child benefits have been re-introduced also for income brackets 7 and 8.
- From 2019 the payment for holiday leave is tax and SSCs free up to 100% of the latest known average monthly wage in the Republic of Slovenia. Before 2019 it was burdened only by PIT while the SSCs exemption was only up to 70 % of the latest average monthly wage.
- The amendments to the personal income tax legislation valid from 1 January 2020 include increase of tax brackets thresholds (in first bracket to EUR 8 500, in second to EUR 25 000, in third to

EUR 50 000 and in fourth bracket to EUR 72 000), reduction of tax rates in second (from 27% to 26%) and third (from 34% to 33%) tax bracket, increase of the general tax allowance (to EUR 3 500) and introduction of additional linear general tax allowance for the whole income interval up to EUR 13 316.83. The linear function was updated accordingly.

- On 1 January 2022 revised tax brackets thresholds were introduced. Tax rate in the highest tax bracket was reduced from 50% to 45%. General tax allowance was increased to EUR 4 500; linear function for additional tax allowance was updated accordingly, but only in constant term and the income interval for which it is used. Family allowances were adjusted due to indexation. Salary paid on the basis of business performance is now exempt from the income tax up to 100% of the average wage in Slovenia or up to an employee's average salary, whichever is favourable for an employee. An automatic adjustment of tax credits and net annual tax basis in the scale for assessing personal income tax with the growth in consumer prices was also introduced.
- On 1 January 2023 general allowance was increased to EUR 5 000 and the income threshold up to which the additional tax allowance is applicable was raised to EUR 16 000. The linear function for additional tax allowance was updated accordingly. Family allowances were increased by 7.5 %. The tax rate in the highest tax bracket was raised from 45 % back to 50 % and tax-free income from business performance was limited again only to 100% of the average wage in Slovenia. A special allowance of EUR 1 300 for young people up to the age of 29 on their income from employment was introduced.
- On 1 January 2024 voluntary additional health insurance was abolished and replaced by a compulsory health contribution of EUR 35 per month. The contribution is paid by employees only.
- In 2023 a raise in the SSC rate due to the introduction of long-term care contribution was legislated. The raise will be effective from 1 July 2025. Both employee and employer SSC rates will increase by 1 percentage point.

## Memorandum items

### ***Average gross annual wage earnings calculation***

In Slovenia the gross earnings figures cover wages and salaries paid to individuals in formal employment including payment for overtime. They also include bonus payments and other payments such as pay for annual leave, paid leave up to seven days, public holidays, absences due to sickness for up to 30 days, job training, and slowdown through no fault of the person in formal employment.

The average gross wage earnings figures of all adult workers covering industry sectors B–N are provided by the Statistical Office of the Republic of Slovenia.

### ***Employer contributions to private pension and health schemes***

Some employer contributions are made to private health and pension schemes but there is no relevant information available on the amounts that are paid.

## 2024 Tax equations

The functions which are used in the equations (Taper, MIN, Tax etc) are described in the technical note about tax equations. Variable names are defined in the table of parameters above, within the equations table, or are the standard variables “married” and “children”. A reference to a variable with the affix “\_total” indicates the sum of the relevant variable values for the principal and spouse. And the affixes “\_princ” and “\_sp” indicate the value for the principal and spouse, respectively. Equations for a single person are as shown for the principal, with “\_sp” values taken as 0.

	Line in country table and intermediate steps	Variable name	Range	Equation
1.	Earnings			
	Current year	earn		
	Net earnings Year-1	net_earn_1		
2.	Allowances:			
	Principal	tax_al_princ	P	Basic_al1+Positive(add_al-red_rate*earn)+SSC+IF(children=0,0,IF(children=1,child_al1,IF(children=2,child_al2,child_al3))+IF(Married=0,0,IF(S_earn=0,Depend_al,0))
	Spouse	Tax_al_spouse	S	MINA(Basic_al1+Positive(add_al-red_rate*AD7))+SSC, earn)
3.	Credits in taxable income	taxbl_cr	B	0
4.	CG taxable income	tax_inc	B	Positive(earn-tax_al)
5.	CG tax before credits	CG_tax_excl	B	Tax(tax_inc, tax_sch)
6.	Tax credits (nonwastable)	Tax_cr	B	0
7.	CG tax	CG_tax	B	CG_tax_excl
8.	State and local taxes	local_tax	B	0
9.	Employees' soc security	SSC	P	earn* SSC_rate1+CHC
			S	earn* SSC_rate1+CHC*(married=1)
11.	Cash transfers	cash_trans	J	IF(Children='0,0';VLOOKUP((net_earn_1)/(1+married+children),IF(Married=0;Fam_allow_sp,Fam_allow_mc),IF(Children=1,5,IF(Children=2,6,7))))
13.	Employer's wage dependent contributions and taxes			
	Employer's soc security	SSC_empr	B	earn*SSC_rate2++IF(earn<SSC_minbase,(SSC_rate2*(SSC_minbase-earn)))+(SSC_rate1*(SSC_minbase-earn),0)

Key to range of equation B calculated separately for both principal earner and spouse P calculated for principal only (value taken as 0 for spouse calculation) J calculated once only on a joint basis.

# Spain

---

This chapter includes data on the income taxes paid by workers, their social security contributions, the family benefits they receive in the form of cash transfers as well as the social security contributions and payroll taxes paid by their employers. Results reported include the marginal and average tax burden for eight different family types.

Methodological information is available for personal income tax systems, compulsory social security contributions to schemes operated within the government sector, universal cash transfers as well as recent changes in the tax/benefit system. The methodology also includes the parameter values and tax equations underlying the data.

---

The national currency is the Euro (EUR). In 2024, EUR 0.92 was equal to USD 1. In that year the average worker earned EUR 31 698 (final estimate).

## Personal Income Tax System

### Central government income tax

#### *Tax unit*

As a general rule, the tax unit is the individual. Nevertheless, families have the options of being taxed:

- As married couples filing jointly on the combined income of both spouses and dependents.
- As heads of households (only unmarried or separated individuals with dependents).

#### *Tax allowances and tax credits*

##### **Standard reliefs**

- Basic reliefs: Married couples filing jointly may claim an allowance of EUR 3 400. This figure amounts to EUR 2 150 for heads of single-parent households.
- Maternity tax credit: a non-wastable tax credit addressed to working females with children under 3 years of age up to EUR 1 200, which may be increased up to EUR 1 000 where the taxpayer has incurred qualifying expenses related to nursery schools/kindergartens.
- Large families (3 or more children) or dependent family members with disabilities tax credits: this additional non-wastable tax credit (up to EUR 1 200, in general, or EUR 2 400 for special large families, with 5 or more children) has been raised by EUR 600 for each child exceeding the minimum number of children required for both large family types listed above. It also may be claimed (within the Taxing Wages framework) by single-parent households with two children.
- Relief for social security contributions: All social security payments are fully deductible.
- Other expenses allowance: up to EUR 2 000, which may be increased by the same amount in case of an unemployed accepting a job in a different location implying a change of residence.
- Employment related allowance: Net employment income (gross income - employee social security contributions) may be reduced according to the following rules:
  - Taxpayers with an annual net employment income equal or less than EUR 14 852: EUR 7 302.
  - Taxpayers with an annual net employment income between EUR 14 852 and EUR 17 673.52: EUR 7 302 less the result of multiplying by 1.75 the difference between net employment income and EUR 14 852.
  - Taxpayers with an annual net employment income between EUR 17 673.52 and EUR 19 747.5: EUR 2 364.34 less the result of multiplying by 1.14 the difference between net employment income and EUR 17 673.52.
- Disabled workers allowance: an additional allowance of EUR 3 500 for disabled salary earners. Those with reduced mobility may claim an augmented allowance of EUR 7 750.

As a result of the application of the above rules, net income cannot become negative.

##### **Main non-standard reliefs applicable to an average wage**

- Contributions to Pension Plans. Contributions made by each member of the household may reduce taxable income up to the lower of the following amounts:

- 30% of the sum of labour and economic activities net incomes;
- EUR 1 500.

Moreover, those households whose second earner has net labour income below EUR 8 000 may reduce taxable income up to a maximum of EUR 1 000 on a yearly basis if the principal earner contributes to a Pension Fund for the spouse.

- Relief for subscriptions paid in respect of membership of a trade union and business or professional associations (last item is limited to mandatory membership) up to EUR 500.
- Relief for expenses made for the legal defence of the taxpayer for labour-related conflicts up to a maximum limit of EUR 300.

Other non-standard reliefs provided as deductions are:

- Investment in the acquisition and rehabilitation of own-housing: With effect from 1 January 2013, the tax credit has been abolished. Nevertheless, grandfathering rules apply for those taxpayers who before 1 January 2013 had acquired their main residence; had made some payments for it to be built; had made some payments for restoration/enlargement of their main residence or had made some payments to carry out the adaptation of the main residence of disabled people. However, in the latter two cases the works performed should be completed before 1 January 2017.
- Gifts: 80% of the amounts (below EUR 250) donated to non-profit entities, public administration, public universities and other qualifying institutions. For larger gifts, 40% on the excess, which may be increased to 45% when meeting certain conditions (for fidelity cases) and 10% of the amount donated non-qualifying foundations or associations.
- Investments and expenses in goods of cultural interest: 15% of the amounts granted to the importation, restoration, exhibition, etc., of certain goods listed in the General Register of Goods of Cultural Interest.

Each of these last two amounts cannot exceed 10% of taxable income.

### **Exempt Income**

- The base amount is EUR 5 550 per taxpayer. The same amount is granted for family units filing jointly. Taxpayers aged over 65 years may add EUR 1 150 to the former amount. Those aged over 75 years may claim additionally EUR 1 400.
- Dependent children (under 25 years, in general; for each age, in case of disability): EUR 2 400 for the first dependent child; EUR 2 700 for the second one; EUR 4 000 for the third, and EUR 4 500 for any additional child.
- Childcare allowance: an additional allowance of EUR 2 800 for each of the above dependent children under 3 years of age.
- In case of disabled workers and additional amount of EUR 3 000 also applies. In case of great disability prior amount reaches EUR 9 000.

Child allowances have to be shared equally between spouses when they file separately.

### *Tax schedule*

General rates of tax – resident individuals:

Taxable income (EUR)	Tax at the lower limit (EUR)	Tax rate on taxable income in excess of the lower limit (%)
0–12 450	0	9.50
12 450–20 200	1 182.75	12.00
20 200–35 200	2 112.75	15.00
35 200–60 000	4 362.75	18.50
60 000–300 000	8 950.75	22.50
Over 300 000	62 950.75	24.50

### **State and local income taxes**

The Autonomous Communities (Regional Governments) are liable to set up their own personal income tax schedule to tax the general income tax base. For 2024, those tax rate schedules vary from five to eleven brackets and their marginal rates from 8 to 29.5%. Up to 2009, the tax autonomous share (regional share of the tax) on the general tax base was determined by applying a progressive tax ladder with default values laid down by the Law regulating this tax and fixed by Government. However, the Autonomous Communities (Regional Governments) were competent to modify these values under certain limitations. The complementary tax scale, fixed by the Central Government and applied in default as explained, was removed in 2010, which leaves a State-level ladder and each Autonomous Community determining their own tax scale, subject only to the progressivity requirement. From that moment on, by exercising their legislative competences, the Autonomous Community have been approving their tax scales that, although identical to the State-level tax scale in the beginning, as time elapsed they became increasingly different. These differences have grown since 2015, coinciding with the entry into force of the reform of this tax. In 2024, each Autonomous Community applies its own tax schedule .

Therefore, instead of taking into account a tax rate determined by an Autonomous Community equal to that applied by the Central Government, as past years, the new criteria followed since 2017 is to consider that of the Autonomous Community of Madrid (Madrid Region), which is thought as the most representative tax scale on different grounds, among which it is worth mentioning that this Autonomous Community comprises the Spain capital city and its relative significance as regards this tax, both in terms of number of taxpayers, income level and income tax roughly amounting to one quarter of the total revenues. All these make of it a potential stable criteria over time.

### **Madrid Schedule for general tax base in 2024**

Taxable income (EUR)	Tax at the lower limit (EUR)	Tax rate on taxable income in excess of the lower limit (%)
0–13 362.22	0	8.50
13 362.23–19 004.63	1 135.79	10.70
19 004.64–35 425.68	1 739.53	12.80
35 425.69–57 320.40	3 841.42	17.40
Over 57 320.40	7 651.10	20.50

Now, there is not any local tax rate or schedule in the Spanish PIT. However, some Local Governments (the bigger and province capital cities) receive a fixed percentage of the PIT revenues.

## Compulsory Social Security Contributions to Schemes Operated within the Government Sector

Social Security contributions are assessed on the basis of employees' gross earnings taking into account certain ceilings of gross employment income. In 2024, these ceilings are:

- Lower ceiling: EUR 15 876
- Upper Ceiling: EUR 56 646

These ceilings are based on a full-time job. For part-time workers, ceilings are proportional to the real hours worked (the tax equations used for this Report do not take into account the lower ceiling).

### ***Employees' contributions***

- Old age pension/sickness and disability: 4.7%
- Unemployment: 1.55%
- Professional Training: 0.1%
- Intergenerational equity mechanism: 0.12%

### ***Employers' contributions***

- Old age pension/sickness and disability: 23.6%
- Unemployment/Work injuries: 5.50%
- Wages fund: 0.2%
- Professional Training: 0.6%
- Intergenerational equity mechanism: 0.58%

## Universal Cash Transfers

### ***Transfers related to marital status***

None.

### ***Transfers for dependent children***

As of the 1<sup>st</sup> of June 2020, the means-tested allowance (*prestaciones familiares por hijo a cargo*) has been subsumed in the new national Minimum Income Benefit Scheme (*Ingreso Mínimo Vital*). However, grandfathering rules apply in 2024. EUR 588.00 for 1-child families with annual gross earnings below EUR 14 544.00; the child transfer decreases with income between EUR 14 544.00 and EUR 15 083.00; the value is 0 for gross earnings exceeding EUR 15 083.00. EUR 1 176.00 for families with 2 children with annual gross earnings below EUR 16 725.60; the child transfer decreases with income between EUR 16 725.60 and EUR 17 803.60; the value is 0 for gross earnings exceeding EUR 17 803.60.

## Main Changes in Tax/Benefit Systems since 2017

None

## Memorandum Items

### *Identification of an AW and calculation of earnings*

Refer to the information provided in the Annex of this Report.

## 2024 Tax equations

The functions which are used in the equations (Taper, MIN, Tax etc) are described in the technical note about tax equations. Variable names are defined in the table of parameters above, within the equations table, or are the standard variables “married” and “children”. A reference to a variable with the affix “\_total” indicates the sum of the relevant variable values for the principal and spouse. And the affixes “\_princ” and “\_sp” indicate the value for the principal and spouse, respectively. Equations for a single person are as shown for the principal, with “\_sp” values taken as 0.

	Line in country table and intermediate steps	Variable name	Range	Equation
1.	Earnings	earn	B	for individual taxation: earn=earn_princ, or earn='earn_sp' for joint (family) taxation: earn=earn_princ+earn_sp
2.	Allowances:			
	Work related, individual	work_ind	B	IF(earn-SSC<=wr_lim_min,wr_allow_max+oth_ded_exp, IF(earn-SSC<=wr_lim_avg,wr_allow_max-wr_rate1*((earn-SSC)-(wr_lim_avg))+oth_ded_exp, IF(earn-SSC<=wr_lim_max,wr_allow_avg-wr_rate2*((earn-SSC)-(wr_lim_avg))+oth_ded_exp,oth_ded_exp)))
	Work related, family	work_fam	J	IF(AND(earn_sp=0,married=0,children=0),0,IF(earn_total-SSC_fam<=wr_lim_min,wr_allow_max+oth_ded_exp,IF(earn_total-SSC_fam=wr_lim_max,wr_allow_max-wr_rate*((earn_total-SSC_fam)-(wr_lim_min))+oth_ded_exp,oth_ded_exp)))
	Joint taxation allowance	joint_allow_fam	J	IF(AND(Married=0,Children=0),0,IF(AND(Married=0,Children>0),joint_tax_allow_fam2,joint_tax_allow_fam1))
	Personal and family exempt income, individual	ex_inc_ind	B	per_fam_exempt_inc
	Personal and family exempt income, family	ex_inc_fam	J	IF(AND(Married=0,Children=0),0,per_fam_exempt_inc)
	Children exempt income, individual	child_ex_inc_ind	P	IF(earn_sp=0,' (children>0)*(dep_child+(children>1)*dep_child2+(children>2)*dep_child3+(children>3)*(children-3)*dep_child4), (children>0)*(dep_child+(children>1)*dep_child2+(children>2)*dep_child3+(children>3)*(children-3)*dep_child4)/2)
			S	IF(earn_sp=0,' 0, (children>0)*(dep_child+(children>1)*dep_child2+(children>2)*dep_child3+(children>3)*(children-3)*dep_child4)/2)

		local_tax_cr_fam	J	MAXA(0,VLOOKUP(ex_inc_fam+child_ex_inc_fam,tax_sch_sa,2)+((ex_inc_fam+child_ex_inc_fam)-VLOOKUP(ex_inc_fam+child_ex_inc_fam,tax_sch_sa,1))*VLOOKUP(ex_inc_fam+child_ex_inc_fam,tax_sch_sa,3))
	State and local tax	local_tax_ind	B	Positive(local_tax_ind_excl-local_tax_cr_ind)
		local_tax_fam	J	Positive(local_tax_fam_excl-local_tax_cr_fam)
9.	Employees' soc security	SSC	B	IF(AND(earn>0,earn<='min_lim'),'min_lim*(pension_rate+unemp_rate+oth_rate),IF(earn>='top_lim','top_lim*(pension_rate+unemp_rate+oth_rate),earn*(pension_rate+unemp_rate+oth_rate)))
		SSC_fam	J	SSC_princ+SSC_sp
11.	Cash transfers	Child_transf		IF(Children=0,0,IF(earn<='VLOOKUP(Children,'SS_child_table,2),SS_child_benefit*Children,IF(earn<='VLOOKUP(Children,'SS_child_table,3),VLOOKUP(Children,SS_child_table,3)-earn,0)))
13.	Employer's SSC	SSC_empr		IF(AND(earn>0,earn<='min_lim'),'min_lim*(pension_empr+unemp_empr+oth_umpr),IF(earn>='top_lim','top_lim*(pension_empr+unemp_empr+oth_empr),earn*(pension_empr+unemp_empr+oth_empr)))

Key to range of equation B calculated separately for both principal earner and spouse P calculated for principal only S calculated for spouse only J calculated once only on a joint basis.

# Sweden

---

This chapter includes data on the income taxes paid by workers, their social security contributions, the family benefits they receive in the form of cash transfers as well as the social security contributions and payroll taxes paid by their employers. Results reported include the marginal and average tax burden for eight different family types.

Methodological information is available for personal income tax systems, compulsory social security contributions to schemes operated within the government sector, universal cash transfers as well as recent changes in the tax/benefit system. The methodology also includes the parameter values and tax equations underlying the data.

The national currency is the Swedish Kronor (SEK). In 2024, SEK 10.57 were equal to USD 1. In that year, the average worker earned SEK 537 302 (Secretariat estimate).

## Personal Income Tax Systems

### Central government income taxes

#### *Tax unit*

Spouses are taxed separately.

#### *Tax allowances and tax credits*

#### **Standard reliefs**

- Basic reliefs: A basic allowance is given for assessed earned income and varies between SEK 16 800 and SEK 44 200, depending on income. When individuals pay central government income tax, the basic allowance is at its lowest level, which equals SEK 16 800. The basic allowance depends on the assessed earned income and the basic amount, which equals SEK 57 300 in 2024.

Assessed-Earned- Income (SEK) Relative to Basic Amount (BA)	Share of BA at lower bracket	For exceeding income
—0.99	0.423	
0.99—2.72	0.423	+0.2
2.72—3.11	0.77	
3.11—7.88	0.77	-0.1
7.88—	0.293	

For taxpayers older than 66, the basic relief is calculated differently:

Assessed-Earned- Income (SEK) Relative to Basic Amount (BA)	Share of BA at lower bracket	For exceeding income
- 1.11	1.11	
1.11 - 1.965	1.11	+0.257
1.965 - 3.24	1.334	+0.3949
3.24 - 5.00	1.838	+0.11693
5.00 - 7.88	2.138	+0.1513
7.88 - 8.08	2.574	+0.1643
8.08 - 10.74	2.606	
10.74 - 12.16	2.606	-0.62
12.16 - 13.54	1.723	
13.54 - 38.42	1.723	-0.0574
38.42 -	0.293	

- Standard marital status reliefs: None.
- Relief(s) for children: None.
- Work-related expenses: None.
- Other: None.

### Main non-standard tax reliefs applicable to an AW

- Interest on qualifying loans: Interest payments are offset against capital income. The resulting net capital income is the tax base. A tax credit is given in the case of negative capital income,
- Medical expenses: None. Other allowances are given for: the amount of commuting expenses exceeding SEK 11 000,
- other types of work-related expenses exceeding SEK 5 000; examples are the costs of tools, work-related phone calls using the taxpayer's private telephone,
- increased living expenses while on business trips, e.g., such as the use of a private car if these costs are not reimbursed by the employer,
- double housing expenses due to temporary work at other geographical locations (too far from home for commuting), or if the family for some reason can't move, even if the job is of a permanent nature,
- travelling expenses for travelling home if the taxpayer works in another place than his/her place of residence.

### Tax schedule

Taxable Income (SEK)	Tax (SEK) at lower bracket	For exceeding income, %
0–598 500	0	0
Over 598 500	0	20

### Tax credits

A tax credit equal to 100% of the compulsory social security contributions paid by the employee is granted.

For a person aged 65 or less, an annual Earned Income Tax Credit (EITC) worth up to approximately SEK 42 700 at the average local tax rate is granted on labour income. The EITC is connected to the basic allowance (BAL), the basic amount (BA) and the local tax rate (LTR). The Basic Allowance is determined in the Section on Standard reliefs; the local tax rate is discussed in the Section on Local Government Income Taxes. The Basic Amount (BA) in 2024 is SEK 57 300. For those older than 65 a simplified EITC (not connected to the local tax rate or the basic amount) worth up to around SEK 36 000 is granted. The EITC is phased-out for those with incomes above around SEK 775 000 a year.

The tax credits are non-refundable in the sense that they cannot reduce the individual's tax payments to less than zero. The EITC is deducted from the local government income tax, whereas the tax credit for the social security contributions is deducted from other taxes as well. However, the central government covers the expenses for the tax credits.

For taxpayers younger than 65, the EITC is calculated as follows:

Earned Income (EI)	EITC
—0.91 BA	$(EI - \text{BAL}) * \text{LTR}$
0.91 BA—3.24 BA	$(0.91 \text{ BA} + 0.3874 * (EI - 0.91 \text{ BA}) - \text{BAL}) * \text{LTR}$
3.24 BA—8.08 BA	$(1.813 \text{ BA} + 0.1643 * (EI - 3.24 \text{ BA}) - \text{BAL}) * \text{LTR}$
8.08 BA—13.54 BA	$(2.608 \text{ BA} - \text{BAL}) * \text{LTR}$
13.54 BA–	$(2.608 \text{ BA} - \text{BAL}) * \text{LTR} - 0.03 * (EI - 13.54 \text{ BA})$

For taxpayers older than 65, the EITC is calculated differently:

Earned Income (EI)	EITC
– 1.75 BA	0.22*EI
1.75 BA—5.24 BA	0.2635 BA + 0.07*EI
5.24 BA—10.48 BA	0.6293 BA
10.48 BA—	0.6293 BA – 0.03*(EI–10.48 BA)

Since 1st of January 2021 a wastable general tax credit applies to taxable income exceeding SEK 40 000 per year. The tax credit is 0.75 percent of exceeding income up to a maximum tax credit of SEK 1 500.

## **Local government income taxes**

### *General description of the systems*

Sweden has both a central government and a local government personal income tax. They are completely coordinated in the assessment process and refer to the same period, i.e., the income year coincides with the calendar year.

### *Tax base*

The tax base is the same as for the central government income tax. The basic allowance for individuals paying local government tax varies between SEK 16 800 and SEK 44 200; it depends on the taxpayer's income. For a taxpayer earning the AW, this basic allowance amounts to SEK 16 800.

### *Tax rates*

The local government personal income tax is proportional and differs between municipalities. The average rate amounts to 32.37% in 2024, with the maximum and minimum rates being 35.30% and 28.98%, respectively.

## **Compulsory Social Security Contributions to Schemes Operated within the Government Sector**

### ***Employees' contributions***

A general pension contribution of 7% of personal income is paid by employees and the self-employed when income is equal to or greater than 42.3% of the basic amount underlying the basic allowance (see the Section on Standard reliefs). The contribution cannot exceed SEK 43 000 since the general pension contributions are not paid for income over SEK 614 900 (=8.07\*76 200). The employees' contribution is offset with a tax credit.

### ***Employers' contributions***

The employers' contributions are calculated as a percentage of the total sum of salaries and benefits in a year. For the self-employed, the base is net business income. The rates for 2024 are listed below.

Program	Employer (%)	Self-employed (%)
Retirement pension	10.21	10.21
Survivor's pension	0.60	0.60
Parental insurance	2.60	2.60
Health insurance	3.55	3.64
Labour market	2.64	0.10
Occupational health	0.20	0.20
General wage tax	11.62	11.62
Total	31.42	28.97

In certain regions, a reduction of 10% of the base, maximum SEK 7 100 per month, is granted (SEK 18 000 per year for self-employed) (it is not included in the calculations underlying this Report). For employees who are over 66 years old and born after 1937 only the retirement pension contribution (10.21%) is applicable. For persons born in 1937 or earlier no employers' social security contributions, is applied.

On premiums for occupational pensions paid by the employer a special wage tax (24.26%) is applied.

For self-employed a general reduction of 7.5% on the SSC is applicable if the income exceeds SEK 40 000 per year. The maximal reduction is SEK 15 000 per year.

## Universal Cash Transfers

### *Transfers related to marital status*

None.

### *Transfers for dependent children*

The transfers are tax exempt and independent of the parents' income. The transfers for each child are as follows:

	2024
First child	15 000
Second child	16 800
Third child	21 960
Fourth child	27 120
Fifth and subsequent child	30 000

## Main Changes in Tax/Benefit Systems Since 1998

A tax credit of SEK 1 320 was introduced for low- and average income earners in 1999. The credit is reduced by 1.2% of taxable income above SEK 135 000. This reduction was abolished in 2003 and was replaced by an increase in the basic allowance.

A tax credit of 25% of the social security contribution paid by employees and the self-employed was introduced in 2000. The tax credit has been gradually increased to 100% in 2006.

In 2004, a special tax credit equal to SEK 200 was provided for the statutory minimum local income tax. The special tax credit was abolished in 2005 as was the statutory minimum state income tax (a lump sum tax) of SEK 200.

In 2021 a general tax credit was introduced. The tax credit is 0.75% of taxable income exceeding SEK 40 000 per year up to a maximum tax credit of SEK 1 500.

The central government income tax bracket is indexed with the consumer price index plus 2%. However, restrictions to the increases were applied in 2004, 2005, 2006, 2016, 2017 and 2024. Additional increases were applied in 2009 and 2019. In 2020 the additional central government income tax over the upper bracket was abolished.

The child allowance was increased in 2000, 2001, 2006, 2010, 2017 and 2018.

The basic allowance has been increased in 2001, 2002, 2003, 2005 and 2006. For persons 65 years or older the basic allowance was increased in 2009, 2010, 2011, 2013, 2014, 2016, 2018, 2019, 2020, 2021, 2022 and 2024. The age limit for the higher basic allowance was increased from 65 to 66 years in 2023.

An earned income tax credit was introduced in 2007 with the purpose of making work economically more rewarding relative to unemployment or inactivity. The earned income tax credit was increased in 2008, 2009, 2010, 2014, 2019, 2022 and 2024. In 2016 a phase-out of the EITC was introduced for persons with incomes above around SEK 775 000 in 2024.

In 2018 a tax credit for income from sickness and activity compensation (corresponding to disability pension) was introduced. This tax credit was increased in 2022.

In 2007, the social security contributions for 18-24-year-old employees and self-employed were reduced. In 2009 the reduction was increased and expanded to include all aged under 26. From 1st August 2015 the reduction was reduced by half and the 1st of June 2016 the reduction was abolished. A reduction of the SSC was reintroduced for 15-17-year-old employees from 1st August 2019. This reduction was abolished from 1st January 2024.

A special wage tax for persons older than 65 was abolished in 2007 for persons born after 1937 and in 2008 for persons born in 1937 or earlier. In 2016 the special wage tax for older persons was reintroduced at a rate of 6.15%. This was abolished as of 1st July 2019.

A general reduction of the SSC for self-employed was introduced in 2010 and increased in 2014.

The deduction for premiums paid to private pension arrangements was lowered in 2015 from SEK 12 000 to SEK 1 800 and abolished in 2016.

## Memorandum Items

### ***Identification of an AW and calculation of earnings***

Basic data for gross earnings are taken from the series Official Statistics of Sweden, published by Statistics Sweden. The calculation is based upon total average monthly or hourly earnings, primarily in September of the calendar year. To arrive at the annual earnings, data have been multiplied by the normal amount of hours worked during the year or the stipulated monthly salary has been multiplied by a factor of 12.2. The figures are representative for the country as a whole. The branch classification is NACE Rev.2 B-N according to the OECD recommendation.

### ***Employer contributions to private health, pension, etc. schemes***

There are a handful of widespread private social security schemes.

## 2024 Tax equations

The equations for the Swedish system are mostly repeated for each individual of a married couple. But the cash transfer is calculated only once. This is shown by the Range indicator in the table below.

The functions which are used in the equations (Taper, MIN, Tax etc) are described in the technical note about tax equations. Variable names are defined in the table of parameters above, within the equations table, or are the standard variables “married” and “children”. A reference to a variable with the affix “\_total” indicates the sum of the relevant variable values for the principal and spouse. And the affixes “\_princ” and “\_spouse” indicate the value for the principal and spouse, respectively. Equations for a single person are as shown for the principal, with “\_spouse” values taken as 0.

	Line in country table and intermediate steps	Variable name	Range	Equation
1.	Earnings	earn		
		trunc_earn	B	TRUNC(earn, -2)
2.	Allowances:	basic_al	B	IF(trunc_earn <= gr_2 * basic_amt, MINA(ROUNDUP(MAXA(gp_1 * basic_amt, (gp_1 + gp_2 * (gr_2 - gr_1)) * basic_amt - gp_2 * MAXA(gr_2 * basic_amt - trunc_earn, 0))), -2), trunc_earn), MINA(ROUNDUP(MAXA(gp_4 * basic_amt, gp_5 * basic_amt - gp_2 * MAXA(gr_2 * basic_amt - trunc_earn, 0) - gp_3 * MAXA(trunc_earn - gr_3 * basic_amt, 0))), -2), trunc_earn))
		ssc_al	B	0
	Total	tax_al	B	basic_al
3.	Credits in taxable income	taxbl_cr	B	0
4.	CG taxable income	tax_inc	B	Positive(earn - basic_al)
5.	CG tax before credits	CG_tax_excl	B	tax_rate * Positive(tax_inc - tax_thrsh)
6.	Tax credits :	ssc_credit	B	Trunc(SSC, -2)
		localtax_credit	B	0
		eitc	B	=TRUNC(MAX((((TRUNC(IF(earned_income > er_2 * basic_amt; IF(earned_income > er_3 * basic_amt; ep_4 * basic_amt; ep_1 * basic_amt + ep_3 * (earned_income - er_2 * basic_amt)); MIN(earned_income; er_1 * basic_amt + ep_2 * (earned_income - er_1 * basic_amt))))); 0)) - basic_allowance) * local_rate - (IF(earned_income > er_4 * basic_amt; ep_5 * (earned_income - er_4 * basic_amt); 0)); 0); 0)
		Final_eitc	B	MIN(eitc, CG_tax_excl + local_tax - ssc_credit)
		gen_tax_cr	B	MIN(gen_tax_cr_rate * MAX(tax_inc - gen_tax_cr_lim, 0), gen_tax_cr_max)
		tax_cr	B	ssc_credit + localtax_credit + final_eitc + gen_tax_cr
7.	CG tax	CG_tax	B	(CG_tax_excl - tax_cr
8.	State and local taxes	local_tax	B	IF(tax_inc > 0, TRUNC(local_rate * tax_inc, 0) + min_taxl, 0)
9.	Employees' soc security	SSC	B	(trunc_earn >= gp_1 * basic_amt) * MINA(ROUNDSSC(trunc_earn * SSC_rate), ROUNDSSC(SSCC * basic_amt * SSC_rate))
11.	Cash transfers	cash_trans	J	Children * CB
13.	Employer's contributions		B	
	Employer's SSC	SSC_empr	B	TRUNC(earn * SSC_empr) - Payroll_empr
	Employer's payroll tax	Payroll_empr	B	TRUNC(earn * PRT)
	Total	Cont_empr	B	SSC_empr + Payroll_empr

Key to range of equation B calculated separately for both principal earner and spouse P calculated for principal only (value taken as 0 for spouse calculation) J calculated once only on a joint basis.

# Switzerland

---

This chapter includes data on the income taxes paid by workers, their social security contributions, the family benefits they receive in the form of cash transfers as well as the social security contributions and payroll taxes paid by their employers. Results reported include the marginal and average tax burden for eight different family types.

Methodological information is available for personal income tax systems, compulsory social security contributions to schemes operated within the government sector, universal cash transfers as well as recent changes in the tax/benefit system. The methodology also includes the parameter values and tax equations underlying the data.

The national currency is the Swiss franc (CHF). In 2024, CHF 0.88 equalled USD 1. The Secretariat has estimated that in that same year the average worker earned CHF 99 430 (Secretariat estimate).

Cantonal and communal income taxes are very substantial in relation to direct federal tax. Here, the canton and commune of Zurich have been selected as an example of the tax system of the 26 cantons. Local income tax is not deductible when calculating federal income tax.

## Personal income tax systems

### *Income tax collected by the federal government (Confederation)*

#### *Tax unit*

The income of spouses living together is taxed jointly, regardless of the property regime under which they were married. Income of children living under parental authority is added to the income of their custodian. Children's labour income is taxed separately and in some cases, as in Zurich, is exempt from tax.

#### *Tax reliefs and tax credits*

**Standard reliefs for “postnumerando” taxation [i.e. annual taxation on the basis of actual earned income, assessed at the end of the year].**

- Basic deduction
- There is a basic deduction of CHF 2 800 for married couples for direct federal tax.
- Deduction for children

A CHF 6 700 deduction is allowed for each child under 18 years of age; the deduction is allowed for older children if they are apprentices or still in school.

- Tax credit for children

A CHF 259 deduction from the tax liability is allowed for each child under 18 years, the deduction is allowed for older children if they are apprentices or still in school.

- Deductions for social insurance contributions and other taxes

Premiums for old age and disability insurance (5.3% of gross earned income) and for unemployment insurance (1.1% for income up to CHF 148 200) are deductible in full. Compulsory contributions of approximately 7.78% to private pension funds are also fully deductible. Health and life insurance premiums are deductible from federal income tax up to CHF 3 600 for married persons and CHF 1 800 for taxpayers who are widow(er)s, divorced or single (such premiums are not considered social contributions). These amounts are increased by CHF 700 for each dependent child.

- Work-related expenses

Taxpayers are allowed a deduction corresponding to 3% of net income (i.e. gross income less contributions for old age and disability insurance, unemployment insurance and work-related provident funds). This deduction may be no less than CHF 2 000 and no more than CHF 4 000.

- Deduction for two-income couples

50% of the smaller income can be deducted, but no less than CHF 8 500 and no more than CHF 13 900.

### Main non-standard reliefs available to the average worker

- Interest payments on qualifying loans

This is the main non-standard relief available to the average worker. It is allowed for all sorts of loans.

- Medical expenses

Expenses incurred as a result of illness, accidents or disability of the taxpayer or one of its dependants are deductible if the taxpayer bears the expenses personally and they exceed 5% of his or her net income.

#### Tax base

Allowable deductions from gross income	Single taxpayer (CHF)	Married taxpayer, 2 children (CHF)
Work-related expenses <sup>1</sup>	2 000–4 000	2 000–4 000
Personal deduction	--	2 800
Deduction for 2 dependent children	--	13 400 (6 600*2)
Social contributions		
Old age insurance	5.3%	5.3%
Unemployment insurance	1.1% <sup>2</sup>	1.1% <sup>2</sup>
Pension fund	7.78%	7.78%
Maximum deductions for health insurance premiums and loan interest <sup>3</sup>	1 800 plus 700 per child	3 600 plus 700 per child
Deduction for two-income couples <sup>4</sup>		8 500–13 900

1. 3% of net income, minimum CHF 2 000, maximum CHF 4 000.

2. 1.1% of income up to CHF 148 200.

3. For the purposes of this publication, taxpayers are assumed to always receive the relevant maximum deduction.

4. 50% of smaller income, minimum the lower of CHF 8 300 or adjusted smaller income, maximum CHF 13 600.

In addition, for the married taxpayer with 2 children, there is a (non-refundable) tax credit for 2 dependent children amounting to CHF 518, thus reducing the tax liability by CHF 518.

#### Tax schedules

##### Rates for persons living alone

Taxable income (CHF) <sup>1</sup>	Base amount (CHF)	Plus % of excess (CHF)	
Up to 14 800	--	--	--
14 800 to 32 200 <sup>2</sup>		0.77	15 000
32 200 to 42 200	137.06	0.88	32 800
42 200 to 56 200	225.94	2.64	42 900
56 200 to 73 900	603.46	2.97	57 200
73 900 to 79 600	1 138.06	5.94	75 200

105 500 to 137 200	3 224.98	8.80	107 400
137 200 to 179 400	6 058.58	11.00	139 600
179 400 to 769 700	10 788.58	13.20	182 600
Over 783 200 <sup>3</sup>	--	11.5 of total income	

1. Fractions of less than CHF 100 are disregarded.

2. Tax y amounts of less than CHF 25 are not billed.

3. The calculation model disregards this part of the schedule.

**Rates for spouses living together and for widowed, separated, divorced taxpayers or unmarried taxpayers living with their own children.**

Taxable income (CHF) <sup>1</sup>	Base amount (CHF)	Plus % of the excess (CHF)	
Up to 28 300	--	--	--
28 800 to 51 800		1	29 300
51 800 to 59 400 <sup>2</sup>	234	2	52 700
59 400 to 76 700	390	3	60 500
76 700 to 92 000	918	4	78 100
92 000 to 105 400	1 538	5	93 600
105 400 to 116 900	2 218	6	107 200
116 900 to 126 500	2 926	7	119 000
126 500 to 134 200	3 612	8	128 800
134 200 to 139 900	4 236	9	136 600
139 900 to 143 800	4 749	10	142 300
143 800 to 145 800	5 149	11	146 300
145 800 to 147 700	5 369	12	148 300
147 700 to 912 600	5 609	13	150 300
For 928 600	106 788		
Over 928 600	--	11.5 of total income	

1. Fractions of less than CHF 100 are disregarded.

2. Tax amounts of less than CHF 25 are not billed.

3. The calculation model disregards this part of the schedule.

**Taxes levied by decentralised authorities (Canton and commune of Zurich)**

*General description of the system*

The system of cantonal and communal taxation has the same features as that of direct federal tax.

The tax base is comprised of income from all sources.

Once the basic amount of tax is set, cantons, communes and churches levy their taxes by applying a multiple, which may change from year to year. In 2012, for example, the canton applied a multiple of 1.0, the commune of Zurich 1.19 and the reformed church 0.10. The basic amount of tax is therefore multiplied by a total of 2.29. However, following the decision no longer to include church tax in Revenue Statistics, it is no longer included in the calculations for Taxing Wages. The basic amount of tax is therefore multiplied by a total of 2.19.

*Tax base*

Allowable deductions from gross income	Single taxpayer (CHF)	Married taxpayer, 2 children (CHF)
Work-related expenses <sup>1</sup>	2 000 – 4 000	2 000–4 000
Personal deduction	--	--
Deduction for 2 dependent children	--	18 600 (9 300*2)
Social contributions		
-- Old age insurance	5.3%	5.3%
-- Unemployment insurance	1.1% <sup>2</sup>	1.1% <sup>2</sup>
-- Pension fund	7.78%	7.78%
Maximum deductions for health insurance premiums and loan interest <sup>3</sup>	2 900 plus 1 300 per child	5 800 plus 1 300 per child
Deduction for two-income couples		6 100

1. 3% of net income, minimum CHF 2 000 CHF, maximum CHF 4 000.

2. 1.1% of income up to CHF 148 200.

3. For the purposes of this publication, taxpayers are assumed to always receive the relevant maximum deduction.

*Postnumerando tax rates***Cantonal income tax (Zurich)**

a) Basic income tax rates for married, divorced, widowed or single taxpayers living with children:

Taxable income (CHF) <sup>1</sup>	Base amount (CHF)	Plus % of the excess (CHF)	
Up to 13 500	--	0	--
13 500 to 19 600	--	2	13 900
19 600 to 27 300	126	3	20 200
27 300 to 36 700	366	4	28 200
36 700 to 47 400	754	5	37 900
47 400 to 61 300	1 309	6	49 000
61 300 to 92 100	2 167	7	63 300
92 100 to 122 900	4 393	8	95 100
122 900 to 169 300	6 945	9	127 000
169 300 to 224 700	11 256	10	174 900
224 700 to 284 800	16 976	11	232 100
284 800 to 354 100	23 807	12	294 200
Over 354 100	32 399	13	365 800

b) Basic income tax rates for other taxpayers (single without children).

Taxable income (CHF) <sup>1</sup>	Base amount (CHF)	Plus % of the excess (CHF)	
Up to 6 700	--	0	--
6 700 to 11 400	--	2	6900
11 400 to 16 100	98	3	11 800
16 100 to 23 700	242	4	16 600
23 700 to 33 000	558	5	24 500
33 000 to 43 700	1 038	6	34 100
43 700 to 56 100	1 698	7	45 100
56 100 to 73 000	2 601	8	58 000
73 000 to 105 500	3 993	9	75 400
105 500 to 137 700	7 017	10	109 000
137 700 to 188 700	10 337	11	142 200
188 700 to 254 900	16 134	12	194 900
Over 254 900	24 342	13	263 300

1. Fractions below CHF 100 are disregarded.

c) Annual multiple as a percentage of basic tax rates:

-- Canton of Zurich	98
-- Commune of Zurich	119
-- Roman Catholic church tax	10.01 (for info.)
-- Reformed Church tax	10.01 (for info.)

A personal tax of CHF 24 is added.

*Tax rates used for this study*

This study uses the rates of tax levied by the federal, cantonal and communal tax authorities.

## Compulsory social security contributions to schemes operated within the government sector

### **Employee contributions**

#### *Retirement pensions*

5.3% of gross income for old age insurance.

#### *Health insurance*

--

#### *Unemployment*

1.1% on the portion of income up to CHF 148 200.

#### *Work-related accidents*

--

#### *Family allowances*

--

#### *Other*

--

### **Employer contributions**

#### *Retirement pensions*

5.3% of gross income for old age insurance.

#### *Health insurance*

--

#### *Unemployment*

1.1% on the portion of income up to CHF 148 200.

#### *Work-related accidents*

--

#### *Family allowances*

The employer pays a benefit for dependent children of an employee. The effective benefits paid depend on the Canton of residence and the respective employer. As of 1 January 2009, a new Swiss-wide minimum amount of CHF 2 400 for children up to 16 years of age and CHF 3 000 for children in education

between 16 and 25 years of age has been established. In most cases, the benefit paid exceeds this minimum. The average family benefit is estimated to amount to CHF 3 000 per child per year.

This benefit is taxable along with other components of income.

The family allowance contributions are not included in the Taxing Wages results either as they are paid to a privately-managed fund. These contributions therefore qualify as non-tax compulsory payments (see also the section on Calculation of non-tax compulsory payments).

*Other*

--

## Universal cash benefits

### ***Benefits linked to marital status***

No such benefits are paid.

### ***Benefits for dependent children***

The employer pays a benefit of, on average, CHF 3 000 per year for each dependent child of an employee. This benefit is taxable along with other components of income. See 2.2.5.

## Main changes in the tax/benefit system since 1998

On 1 January 1999, the canton of Zurich switched from biennial praenumerando taxation to annual postnumerando taxation on individual income. As a result, the direct federal tax is based on annual postnumerando taxation as well.

As of 1 January 2008, the basic deduction for married couples and the deduction for two-income couples were introduced. These measures are intended to minimise the marriage penalty and to reduce the high taxation of secondary earners, thereby increasing labour force participation of skilled secondary earners.

As of 1 January 2024, the tax credit for children reduces the tax liability by CHF 259 per child.

### ***Changes to labour taxation due to the COVID pandemic in 2020 and 2021***

None.

## Memorandum item

### ***Identification of the average worker***

The population includes men and women working in industry, arts and crafts. The stated income is for the average of workers in the same sector. The geographical scope is the entire country, whereas the amount of tax is computed in respect of the canton and commune of Zurich.

### ***Method of calculation used***

- Unemployment benefits: not included;

- Sick leave payments: not included;
- Paid leave allowances: included;
- Overtime: included;
- Periodic cash bonuses: included;
- Fringe benefits: not included;
- Basic method used for calculation: monthly wages are multiplied by 12;
- Close of the income tax year: 31 December;
- Reference period for computing wages: from 1 January to 31 December of the year in question.

### ***Calculation of non-tax compulsory payments***

Switzerland imposes some important non-tax compulsory payments (NTCPs). These NTCPs are not included in the Taxing Wages models except when they qualify as standard personal income tax reliefs. Compulsory payments indicators, which combine the effect of taxes and NTCPs, are calculated by the OECD Secretariat and presented in the OECD Tax Database (See: <https://www.oecd.org/content/dam/oecd/en/topics/policy-issues/tax-policy/non-tax-compulsory-payments.pdf>). Switzerland levies the following employee and/ or employer NTCPs:

- Contributions to the second pillar of the pension system (occupational pension funds): Occupational pension funds are mandatory for salaried persons earning at least CHF 22 050 annually. Old age insurance is based on individual savings. The savings assets accumulated by the insured person on his individual savings account over the years serve to finance the old age pension. The constituted capital is converted into an annual old age pension based on a conversion factor. Contribution rates depend on the occupation and the pension fund. An estimated representative rate amounted to 7.78% for employees and 10.46% for employers in 2024.
- Health insurance is compulsory for all persons domiciled in Switzerland. Every family member is insured individually, regardless of age. Health insurance contributions are lump sum contributions per capita depending on age, sex, canton of residence and insurer. The national average rates for 2022 amount to CHF 6 649.20 for adults and CHF 1 570.80 for children per year. Health insurance premiums can be reduced depending on the contributor's income level and his family situation. Each canton has its own definition of the income thresholds and the reduction regime. The health insurance premium and reduction rates of the Canton of Zurich are used in the calculations.
- Family allowance: Employers have to make family allowance contributions. The contribution rates differ among cantons and family contribution funds. A representative rate has to be estimated, it amounts to 1.68% (national average 2021) or 1.025 for the canton of Zurich (2024).
- Accident insurance: Accident insurance is compulsory for every employee. Employees are automatically insured by their employer, whereas the employers are more or less automatically assigned to a particular insurance company depending on their branch of trade. The risk and associated costs of the respective business activity determines the insurance premiums. A representative rate would have to be estimated.

## 2024 Tax equations

The equations for the Swiss system in 2024 are mostly calculated on a family basis.

Variable names are defined in the table of parameters above, within the equations table, or are the standard variables “married” and “children”. A reference to a variable with the affix “\_total” indicates the sum of the relevant variable values for the principal and spouse. And the affixes “\_princ” and “\_spouse” indicate the value for the principal and spouse, respectively. Equations for a single person are as shown for the principal, with “\_spouse” values taken as 0.

	Line in country table and intermediate steps	Variable name	Range	Equation
1.	Earnings	earn		
2.	Allowances:	partner_al	J	IF(earn_spouse-work_al_spouse-SSC_spouse>partner_min_fed,(Married*MAX(partner_min_fed,MIN(partner_max_fed,partner_rate_fed*(earn_spouse-work_al_spouse-SSC_spouse))))),earn_spouse-work_al_spouse-SSC_spouse)+Married*Married_ded_fed
	Children	children_al	J	Children*fed_child_al+ (Children>0)*(Married=0)*sing_par_al
	Soc sec contributions	SSC_al	B	SSC + NTCP_pension_ee*IF(earn_princ>0.75*NTCP_old_age_max,MAX(0.125*NTCP_old_age_max,earn_princ-0.875*NTCP_old_age_max),0)+NTCP_pension_ee*IF(earn_spouse>0.75*NTCP_old_age_max,MAX(0.125*NTCP_old_age_max,earn_spouse-0.875*NTCP_old_age_max),0)
	Work related	work_al	B	IF(earn-SSC>work_exp_min,MAX(work_exp_min,MIN(work_exp_max,work_exp*(earn-SSC))),earn-SSC)
	Other	oth_al	J	IF(Married,IF(Children>0,max_dedn_m+Children*fed_dedn_c,max_dedn_m),IF(Children>0,max_dedn_s+Children*fed_dedn_c,max_dedn_s))
	Total	tax_al	J	partner_al+children_al+SSC_al+work_al+oth_al
3.	Credits in taxable income	taxbl_cr	J	Cash_tran
4.	CG taxable income	tax_inc	J	positive(earn_total-tax_al+taxbl_cr)
5.	CG tax before credits	CG_tax_excl	J	IF(Married+Children=0,'Tax(tax_inc, IFD_sch_s)+IFD_min_s*(Tax(tax_inc, IFD_sch_s)>0)', Tax(tax_inc, IFD_sch_m)+IFD_min_m*(Tax(tax_inc, IFD_sch_m)>0))
6.	Tax credits :	Children_cred	J	Child_cred*Children
7.	CG tax	CG_tax	J	Positive(CG_tax_excl- Children_cred)
8.	State and local taxes	local_tax_inc	J	MAX(earn_total+taxbl_cr-local_basic*(1+Married)-Children*local_child-work_al_total-SSC_total-(local_dedn*(1+Married)+Children*local_dedn_c)-(earn_spouse>0)*partner_local,0)
		local_tax		IF((Married+Children)>0, Tax(local_tax_inc, Zurich_sch_m)*statetax_mult+(1+Married)*Zurich_min*(Tax(local_tax_inc, Zurich_sch_m)>0), Tax(local_tax_inc, Zurich_sch_s)*statetax_mult+(Tax(local_tax_inc, Zurich_sch_s)>0)*Zurich_min)
9.	Employees' soc security	SSC	B	(old_age)*earn+IF(earn<=unemp_ciel,earn*unemp_rate,unemp_ciel*unemp_rate+(earn-unemp_ciel)*unemp_rate2)
11.	Cash transfers	Cash_tran	J	Children*child_ben
13.	Employer's soc security	SSC_empr	B	SSC

Key to range of equation B calculated separately for both principal earner and spouse P calculated for principal only (value taken as 0 for spouse calculation) J calculated once only on a joint basis.

# Türkiye

---

This chapter includes data on the income taxes paid by workers, their social security contributions, the family benefits they receive in the form of cash transfers as well as the social security contributions and payroll taxes paid by their employers. Results reported include the marginal and average tax burden for eight different family types.

Methodological information is available for personal income tax systems, compulsory social security contributions to schemes operated within the government sector, universal cash transfers as well as recent changes in the tax/benefit system. The methodology also includes the parameter values and tax equations underlying the data.

The national currency unit is the “Türk Lirası” (TL). In 2024, TL 32.77 were equal to USD 1. In that year, the average worker earned TL 568 151 (Country estimate).

## Personal Income Tax Systems

### **Central government income tax**

#### *Tax unit*

Spouses are taxed separately on earned income. This rule has been applied since 1 January 1999.

#### *Tax allowances and tax credits*

##### **Standard reliefs:**

- Reliefs for social security contributions: Employee's social security contributions are deductible from gross earnings. These contributions are 15% of gross income as stated by the Social Insurance Act. The contribution to the unemployment fund is included in this amount and equals 1% of gross income.
- Contributions to public pension funds established by law are deductible.
- Work related expenses: None.
- Minimum Wage tax exemption<sup>1</sup>:

With the new regulation introduced by Law No. 7349, the wages corresponding to the remaining amount after deducting the worker's social security institution premium and unemployment insurance premium from the monthly gross minimum wage is exempted from income and stamp taxes. The deductible premiums should be the amount valid in the month in which the wage payment is made.

The tax amount to be paid regarding the wages is calculated by deducting the portion corresponding to the exemption amount. The tax that will not be collected due to the exception does not exceed the tax that should be calculated over the monthly minimum wage in the relevant month. This exception applies only to the highest wage for those who receive wages from more than one employer.

##### **Main non-standard tax reliefs applicable to an AW**

- Reliefs for disabled: Article 31 of PIT Law (implemented in 01.01.2004 by the law 4842) regulates tax relief for disabled persons. The employee who lost his/her working capacity with at least 80% is considered to be disabled in the 1st degree; employees are disabled in the 2nd and 3rd degree if they lost their working capacity with at least 60% and 40% respectively. In these cases, the following amounts are deductible from monthly wages:
  - Disabled in the 1st degree: TL 6 900
  - Disabled in the 2nd degree: TL 4 000
  - Disabled in the 3rd degree: TL 1 700
- Legal deductions for public institutions such as OYAK (Social Aid Institution for Military Officers).
- 50% of the premiums paid by the wage-earner for life insurance policies which belong to himself (or herself), the spouse and dependent children and all of the premiums paid by the wage-earner for personal insurance policies including death, accident, health, illness, disablement, unemployment, maturity, birth, education, etc. provided that the insurance is contracted with a company establishment in or with a main office in Türkiye. (The total amount of deductible

premiums cannot exceed 15% of the wage that is earned in the current month. The annual amount cannot exceed the annual minimum wage.

- Membership payments made to labour unions.

### *Tax schedule*

The tax schedule in 2024 is as follows:

Taxable income (TL)	Tax on lower threshold (TL)	Tax on excess amount above lower threshold (%)
Up to 110 000		15
110 000 up to 230 000	16 500	20
230 000 up to 870 000	40 500	27
870 000 up to 3 000 000	213 300	35
Over 3 000 000	958 800	40

### **State and local income taxes**

Income tax is levied only by the central government.

### **Stamp tax**

The stamp tax base is gross earnings. The tax rate is 0.759% in 2024.

## **Compulsory Social Security Contributions to Schemes Operated within the Government Sector**

### **Employees' contributions**

*For long term insurance branches; invalidity, old age and survivors: 9%*

*Health insurance: 5%*

*Unemployment insurance: 1%*

### **Employers' contributions**

*For long term insurance branches; invalidity, old age and survivors: 11%*

*Health insurance: 7.5%*

*Unemployment insurance: 2%*

*For short term insurance branches; work accident, occupational diseases, sickness, maternity: 2%*

In order to increase employment and reduce regional imbalances in Türkiye; various incentives policies have been implemented by state. One of the various incentives is reduction of contributions for 5 points. If the employer pays contributions regularly without interruption and has no outstanding debt to SGK, 5 points of employer's share of long term insurance contributions (11%) is paid by the State.

For employees whose gross earnings are below the base or above ceiling earnings, which are determined once in a year, these contribution rates are applied to the base or ceiling amounts respectively. In 2024, the base amount is approximately TL 240 030 and the ceiling amount is approximately TL 1 800 227. Under the Law No. 5510 (Social Security and General Health Insurance Law), the base wage for social security contributions is equal to the minimum wage. Because employees cannot be paid less than the minimum wage, the base wage is not considered in this publication. However, the ceiling earnings are considered for the purposes of this Report.

## Universal Cash Transfers

Employees obtain universal cash transfers according to the collective labour agreements that are signed between their employer and the labour union(s). These agreements vary with the bargaining power of the different parties in the different sectors in the economy. This explains why there is no standard amount reflecting these general transfers.

## Main Changes in Tax/Benefit System Since 2004

The main laws about tax/benefit system are the Personal Income Tax Law (No: 193) that covers personal income taxation, Social Security and General Health Insurance Law (No: 5510) that covers social security contributions and Unemployment Insurance Law (No: 4447) that covers unemployment insurance fund.

The main changes have been made to the following laws 5615, 6009, 6327 and 6645 which are as follows:

- According to Act No: 5615, the new application “Minimum Living Relief” started to be implemented. (See the section on Tax allowances and tax credits).
- According to Act No: 6009, the taxation of the wages are differentiated than the taxation of the other taxable revenue resources like trading income, income from immovable property or income from investments. By this way, it is ensured that wages (comparative to other income items) are later entered into the 3rd bracket on the income tax schedule.
- According to Act No: 6327, (published in the Official Gazette issue 28338 on 29 June 2012) there are important amendments in the Private Pension System Regulations. According to this law, any citizen of the Republic of Türkiye will have the right for state subsidy for his/her paid contributions to the Private Pension Account. The contribution upper limit to favour this incentive is the annual amount of minimum wage 25% of this amount shall be transferred to the account of the insured party as a state subsidy. The state subsidy shall be earned in proportion to the amount of time within the system.
- According to Act No: 6645, “Minimum Living Relief” rate is changed from 5% to 10% which is used for third child’s rate.
- According to Act No: 7349, Instead of the minimum living allowance applied since 2008, the minimum wage tax exemption has been introduced beginning from 2022.

## Memorandum Items

### *Identification of an AW*

Weighted mean, by the number of employees, of the monthly average wage<sup>2</sup> information obtained from ‘Structure of Earnings Survey, 2010’, published by TURKSTAT, according to NACE Rev.2 classification

for B-N sections is calculated<sup>3</sup> and B-N aggregated data is gained. (The annual average wage data is calculated by multiplying the monthly average wage values by 12).

The data from 2011-2017 is reached by using 2010=100 base year 'Hourly Earnings Index' and 2010 annual average wage data.

The data from 2018-2024 is reached by using 2021=100 base year 'Hourly Earnings Index' and 2021 annual average wage data.

### ***Contribution to private pension and health schemes***

Business enterprises (employers) are permitted to make additional contributions for pension savings of their employees. However, these amounts of additional premiums are limited by main tax laws. Such additional pension arrangements, which are optional, are not widely used.

## 2024 Parameter values

Average earnings/yr.	Ave_earn	568 151	Country estimate
Income tax	Tax_sch	0 .15	110 000
		0 .20	230 000
		0 .27	870 000
		0 .35	3 000 000
		0 .40	
Stamp tax	Stamp_rate	0 .00759	
Employees SSC	SSC_rate	0 .15	
	SSC_ceil	1 800 227	
	SSC_support	8 400	
	SSC_supp_lim	241 560	
Employers SSC	SSC_empr	0 .175	
Minimum living relief			
	min_wage	240 030	
	min_wage_taxable_income	204 026	

## 2024 Tax equations

The equations for the Turkish system are on an individual basis.

The functions which are used in the equations (Taper, MIN, Tax etc) are described in the technical note about tax equations. Variable names are defined in the table of parameters above, within the equations table, or are the standard variables “married” and “children”. A reference to a variable with the affix “\_total” indicates the sum of the relevant variable values for the principal and spouse. And the affixes “\_princ” and “\_spouse” indicate the value for the principal and spouse, respectively. Equations for a single person are as shown for the principal, with “\_spouse” values taken as 0.

	Line in country table and intermediate steps	Variable name	Range	Equation
1.	Earnings	earn		
2.	Allowances:	tax_al	B	SSC
3.	Credits in taxable income	taxbl_cr	B	0
4.	CG taxable income	tax_inc	B	Positive(earn-tax_al)
	Stamp tax	stamp_tax	B	earn*stamp_rate
5.	CG tax before credits	CG_tax_excl	B	Tax(tax_inc,tax_sch)
6.	Tax credits :	tax_cr	P	=credit_rate*min_wage*(basic_allow+spouse_allow*(IF(Wife=0;Married;0)))+ IF(OR(Children=1;Children=2); Children*child_allow;0)+IF(Children=3;(2*child_allow)+(Children- 2)*third_child_allow;0)+IF(Children>3;(2*child_allow) +(1*third_child_allow)+(1*add_child_allow;0))+IF(AND(earn<=min_wa ge;tax_inc>1st_inc_tax_thrsld);(tax_inc- 1st_inc_tax_thrsld)*(2nd_inc_tax_rate-1st_inc_tax_rate);0)
			S	IF(spouse_earn>0,credit_rate*min_wage*basic_allow,0)
7.	CG tax	CG_tax	B	positive(CG_tax_excl-tax_cr)+stamp_tax
8.	State and local taxes	local_tax	B	0
9.	Employees' soc security	SSC	B	Min(earn,SSC_ceil)*SSC_rate
11.	Cash transfers	cash_trans	B	0
13.	Employer's soc security	SSC_empr	B	Positive(Min(earn,SSC_ceil)*SSC_empr- IF(earn<SSC_supp_lim,SSC_support,0))

Key to range of equation B calculated separately for both principal earner and spouse P calculated for principal only (value taken as 0 for spouse calculation) J calculated once only on a joint basis.

## Notes

<sup>1</sup> Instead of the minimum living allowance applied since 2008, the minimum wage tax exemption has been introduced since 2022.

<sup>2</sup> Monthly wage: Include the sum of monthly basic wages, over time payments, payments for shift work/night work and other regular payments paid to employees in November 2010 by employers.

<sup>3</sup> The average wage amount beginning from 2010 is calculated as a result of a joint working performed by authorities from TURKSTAT and Ministry of Treasury and Finance.

# United Kingdom

## (2024-2025 Income tax year)

---

This chapter includes data on the income taxes paid by workers, their social security contributions, the family benefits they receive in the form of cash transfers as well as the social security contributions and payroll taxes paid by their employers. Results reported include the marginal and average tax burden for eight different family types.

Methodological information is available for personal income tax systems, compulsory social security contributions to schemes operated within the government sector, universal cash transfers as well as recent changes in the tax/benefit system. The methodology also includes the parameter values and tax equations underlying the data.

The national currency is the Pound Sterling (GBP). In 2024, GBP 0.78 was equal to USD 1. In 2024-2025, the Average Worker is estimated to earn GBP 51 310 (Secretariat estimate).

## Personal Income Tax System

### ***Central government income taxes***

#### *Tax unit*

The tax unit is the individual, but certain reliefs depend on family circumstances (see Section on Standard reliefs).

#### *Tax allowances and tax credits*

All figures shown are those applying at the start of the tax year in April.

#### **Standard reliefs**

- Basic reliefs: A personal allowance of GBP 12 570 is granted to each individual with income below GBP 100 000. The personal allowance is then tapered away by GBP 1 for every GBP 2 of income above GBP 100 000.
- Standard marital status reliefs: Marriage Allowance – Allows the transfer of 10% of an individual's personal allowance to their husband, wife or civil partner. The allowance is restricted to couples where the higher earner is a basic rate taxpayer and is only beneficial if the lower earner owes below the personal allowance. The allowance has to be claimed and is given only to those who meet the eligibility criteria.
- Relief for social security contributions and other taxes: None.

#### **Main non-standard tax reliefs applicable to an AW.**

- Work-related expenses: Flat rate expenses for tools and special clothing are allowed to certain occupational categories. Since this provision is not applicable to all manufacturing occupations, and hence average workers, and because the rates vary slightly across categories, this relief is considered here as non-standard;
- Contributions to approved superannuation schemes or personal pension schemes are deducted when calculating taxable income. Premiums on approved life assurance policies payable to life assurance companies attract 12.5% tax relief for policies entered into force before 13 March 1984.

#### *Tax schedule*

In 2024-25 all taxpayers are liable on taxable income other than savings and dividend income at the basic rate of 20% on the first GBP 37 700, 40% over the basic rate limit of GBP 37 700 and 45% over the higher rate limit of GBP 125 140. (Taxable Income is defined as gross income for income tax purposes less allowances and reliefs available at the marginal rate.) Dividend income is charged at 8.75% up to the basic rate limit of GBP 37 700, 33.75% above GBP 37 700 and 39.35% above GBP 125 140. The Dividend Allowance is GBP 500 in 2024-25, meaning that dividend taxpayers will not have to pay tax on the first GBP 500 of their dividend income, no matter what non-dividend income they have. Savings income is charged at 0% up to the starting rate limit on the first GBP 5 000, at 20% up to GBP 37 700, 40% above GBP 37 700 and 45% above GBP 125 140. From 2016-17, a new Personal Savings Allowance was

introduced giving GBP 1 000 of savings income tax free for taxpayers with total income below the basic rate limit or GBP 500 for those with total income below the higher rate limit.

Taxable income (GBP)	Rate %
0–37 700	20
37 700–125 140	40
Over 125 140	45

### ***State and local income tax***

From 2018-19 the Scottish Government has introduced some additional tax bands including a starter rate band for non-savings non-dividend income of Scottish taxpayers. In 2024-25, the starter rate band applied from GBP 12 570 to GBP 14 876. The basic rate band for non-savings non-dividend income is set from GBP 14 876 to GBP 26 561. The Scottish Government has also introduced an intermediate rate band for non-savings non-dividend income of Scottish taxpayers from GBP 26 561 to GBP 43 662. The higher rate band for non-savings non-dividend income of Scottish taxpayers in 2024-25 is from GBP 43 662 to GBP 75 000. In 2024-25 they introduced another new band, the advanced rate band for non-savings non-dividend income of Scottish taxpayers applied from GBP 75 000 to GBP 125 140.

In 2024-25 all Scottish taxpayers are liable on taxable income other than savings and dividend income at the starter rate of 19% on the first GBP 2 306, 20% over the starter rate limit of GBP 2 306, 21% over the basic rate limit of GBP 13 991. The rate was increased in 2023-24 to 42% over the intermediate rate limit of GBP 31 092, remained at 45% over the higher rate limit of GBP 62 430 and in 2024-25 the rate was increased to 48% over the advanced rate limit of GBP 125 140 following the increase to 47% in 2023-24. (Taxable Income is defined as gross income for income tax purposes less allowances and reliefs available at the marginal rate.)

## **Compulsory Social Security Contributions to Schemes Operated Within the Government Sector**

### ***Employees' contributions***

In 2024-25 National Insurance contributions (NICs) were payable by employees earning more than GBP 242 in any week. This averages out to an annual equivalent of GBP 12 570. These NICs are 8% of weekly earnings between the Primary Threshold (GBP 242) and GBP 967 and 2% of earnings above GBP 967. Depending on eligibility, members of the National Insurance scheme qualify for pensions, sickness, industrial injury, unemployment benefits, etc. All employees earning under the weekly Primary Threshold have no National Insurance contribution liability, but a notional contribution will be deemed to have been paid in respect of earnings between GBP 123 and the Primary Threshold to protect benefit entitlement.

### ***Employers' contributions***

Employer's contributions are not payable for employees earning less than GBP 175 per week. The rate of employers' contributions for employees is 13.8% of earnings above GBP 175 per week.

The apprenticeship levy was introduced in April 2017. The apprenticeship levy is charged at a rate of 0.5% on the gross pay bill of employers. Employers will receive an allowance of GBP 15 000 per year to offset against the levy meaning that only employers with a gross pay bill of over GBP 3m will end up paying the levy. Due to the fact that the apprenticeship levy does not apply to all employers, it is not included in the Taxing Wages calculations

## Universal Cash Transfers

### *Transfers related to marital status*

None (widows' benefit is covered by the government pensions scheme noted above).

### *Transfers for dependent children*

Child Benefit: GBP 25.60 per week is paid in respect of the first child in the family up to the age of 19 (if the child aged 16-19 is in education or training) with GBP 16.95 per week paid for each subsequent child.

A High Income Child Benefit Charge applies for any taxpayer who has income over GBP 60 000 and either they or their partner are in receipt of Child Benefit. For those with adjusted net income (ANI, pre-tax income less certain allowances) between GBP 60 000 and GBP 80 000, the amount of the charge will be 1% of the Child Benefit for every GBP 200 of income over GBP 60 000. For those with income over GBP 80 000, the amount of the charge will equal the amount of Child Benefit. Child Benefit recipients can opt out of receiving payments as an alternative to paying the charge. Where both adults are over the threshold, the liability falls on the adult with the highest ANI.

Universal Credit (UC): a payment available to low income families with or without children which is gradually replacing a number of benefits and tax credits (including Working and Child Tax Credit). The maximum amount depends on the age of the claimant(s), whether they are single or in a couple, the number of children, whether claimant(s) have a disability or health condition that limits their capability for work, if claimant(s) have disabled children, whether the claimant(s) are carers, and childcare and housing costs. A couple where one is aged over 25 with a child born prior to 6 April 2017 would receive a maximum UC monthly amount of GBP 950.93 or GBP 11411.16 per year, assuming no other elements are payable. UC is reduced by a "taper rate" of 55 pence for each GBP of earnings (net of income tax and employee social security contributions) above a threshold (or "work allowance") of GBP 673 per month; a different threshold of GBP 404 per month is applied if the claimant has housing costs.

Claimant(s) receive a work allowance if they have limited capability for work or have children. UC may also be reduced by other income the claimant may have. There are further rules around the amount of savings held by claimants, and for some claimants the total amount payable is subject to a cap.

## Recent changes in the tax/benefit system

### *Other changes*

From April 2024, the threshold for the High Income Child Benefit Charge was increased from GBP 50 000 to 60 000, the first rise since the introduction of the charge in 2013. The taper rate was also halved from 1% of Child Benefit for every GBP 100 over the threshold to 1% for every GBP 200. This means that whereas previously the charge was equal to the full amount of Child Benefit at GBP 60 000 (GBP 10 000 above the threshold), the charge is now equal to full Child Benefit at GBP 80 000 (GBP 20 000 above the threshold).

From January 2024, an in-year policy change resulted in the rate charged on weekly earnings between the Primary Threshold (GBP 242) and GBP 967 being cut from 12% to 10%, resulting in an average rate of 11.74% over the tax year 2023-24.

**This rate was reduced further from 10% to 8% from April 2024 for the 2024-25 tax year.** **Memorandum Items**

***Identification of AW and valuation of earnings***

A new Annual Survey of Hours and Earnings (ASHE) has been developed to replace the New Earnings Survey (NES) (results of which are published in Labour Market Trends) and shows the average weekly earnings of full-time employees in April each year. It covers men and women at adult rates in the United Kingdom (excluding Northern Ireland). The annual figure used for the gross earnings of the AW in the United Kingdom is the annual equivalent of the arithmetic average of the weekly earnings figures for April at the beginning and end of the fiscal year, as published in Labour Market Trends.

The earnings figures exclude the earnings of those whose pay was affected by absence (due to sickness etc.). They include overtime, payment by results and shift payments. But they do not include benefits in kind (which could in some circumstances be included in the employee's taxable income in the United Kingdom).

***Employers' contributions to private pension, health etc. schemes***

In 2008, there were 9.0 million active members of occupational pension schemes with two or more members in the UK, of whom 3.6 million were in the private sector and 5.4 million in the public sector.

## 2024 Tax equations

The equations for the UK system are mostly on an individual basis. But Universal Credit is calculated on a family basis and child benefit is calculated only once. This is shown by the Range indicator in the table below.

The functions which are used in the equations (Taper, MIN, Tax etc) are described in the technical note about tax equations. Variable names are defined in the table of parameters above, within the equations table, or are the standard variables “married” and “children”. A reference to a variable with the affix “\_total” indicates the sum of the relevant variable values for the principal and spouse. And the affixes “\_princ” and “\_spouse” indicate the value for the principal and spouse, respectively. Equations for a single person are as shown for the principal, with “\_spouse” values taken as 0.

	Line in country table and intermediate steps	Variable name	Range	Equation
1.	Earnings	Earn		
2.	Allowances:	tax_al	B	IF(Earn<PA_taper,IF(AND(OR(((MAX(Earn-Basic_al,0)))+(MAX(AF7-Basic_al,0)))>((MAX(Earn-(Basic_al+Married_al,0)))+(MAX(AF7-(Basic_al-Married_al,0))))),(MAX(Earn-Basic_al,0)))+(MAX(AF7-Basic_al,0)))>((MAX(Earn-(Basic_al-Married_al,0)))+(MAX(AF7-(Basic_al+Married_al,0))))),AND(Earn<(BRL+Basic_al),(AF7<(BRL+Basic_al))),Married=1),IF(Earn>=AF7,Basic_al+Married_al,Basic_al-Married_al,Basic_al),IF(Earn>(PA_taper+(Basic_al*2)),0,MAX(0,(Basic_al-((Earn-PA_taper)/2))))))
3.	Credits in taxable income	taxbl_cr	B	0
4.	CG taxable income	tax_inc	B	Positive(earn-tax_al)

Key to range of equation B calculated separately for both principal earner and spouse P calculated for principal only (value taken as 0 for spouse calculation) J calculated once only on a joint basis.

# United States

---

This chapter includes data on the income taxes paid by workers, their social security contributions, the family benefits they receive in the form of cash transfers as well as the social security contributions and payroll taxes paid by their employers. Results reported include the marginal and average tax burden for eight different family types.

Methodological information is available for personal income tax systems, compulsory social security contributions to schemes operated within the government sector, universal cash transfers as well as recent changes in the tax/benefit system. The methodology also includes the parameter values and tax equations underlying the data.

The national currency is the dollar (USD). In 2024, the average worker earned USD 70 627 (Secretariat estimate).

## Personal Income Tax System

### **Central/federal government income taxes**

#### *Tax unit*

Families are generally taxed in one of three ways:

- As married couples filing jointly on the combined income of both spouses,
- As married individuals filing separately and reporting actual income of each spouse; or
- As heads of households (only unmarried or separated individuals with dependents).

All others, including dependent children with sufficient income, file as single individuals.

#### *Tax allowances and tax credits*

##### **Standard reliefs**

- **Basic reliefs:** In 2023 a married couple filing a joint tax return is entitled to a standard deduction of USD 29 200. The standard deduction is USD 21 900 for heads of households and USD 14 600 for single individuals. This relief is indexed for inflation. More liberal standard deductions are available for taxpayers who are age 65 or older and taxpayers who are blind. Special rules apply to children who have sufficient income to pay tax and are also claimed as dependents by their parents.
- **Standard marital status reliefs:** Married couples generally benefit from a more favourable schedule of tax rates for joint returns of spouses (see the Tax Schedule Section). There are no other general tax reliefs for marriage.
- **Relief for children:** Low income workers with dependents are allowed a refundable (non-wastable) earned income credit. For taxpayers with one child, the credit is 34% of up to USD 12 390 of earned income in 2024. The credit phases down when income exceeds USD 22 720 (29 640 for married taxpayers) and phases out when it reaches USD 49 084 (56 004 for married taxpayers). The earned income threshold and the phase-out threshold are indexed for inflation. For taxpayers with two children, the credit is 40% of up to USD 17 400 of earned income in 2022. The credit phases down when income exceeds USD 21 560 (28 120 for married taxpayers) and phases out when it reaches USD 55 768 (62 688 for married taxpayers). For taxpayers with three or more children the credit is 45% of up to USD 17 400 of earned income. The credit phases down when income exceeds USD 22 720 (29 640 for married taxpayers) and phases out when it reaches USD 63 048 (67 179 for married taxpayers).
- **Since 1998, taxpayers are permitted a tax credit for each qualifying child under the age of 17.** The special rules for taxable year 2021 have expired, returning the credit to its pre-2021 rules and values (but for an inflation adjustment). For 2024 the maximum credit per child is USD 2 000 for otherwise qualifying children under 17. The refundable (non-wastable) child credit for 2024 is 15 percent of earnings greater than 2 500 up to the lesser of the amount of any child credit unclaimed due to limited tax liability or 1 700 per child.
- **Other dependent tax credit:** For qualifying dependents other than qualifying children for whom a child tax credit was claimed, there is a USD 500 non-refundable credit. The Taxing Wages calculations do not include the other dependent tax credit.

- Phase out of child tax credit and other dependent tax credit: The maximum total credit is reduced for taxpayers with income in excess of certain thresholds. The total of the child tax credit plus the other dependent tax credit is reduced by USD 50 for each USD 1 000 by which modified aggregate gross income exceeds USD 400 000 for married taxpayers filing jointly (USD 200 000 for single and head of household taxpayers).
- Relief for low-income workers without children: Since 1994, low-income workers without children have been eligible for the earned income tax credit. In 2022, low-income workers without children are permitted a non-wastable earned income credit of 7.65% of up to USD 8260 of earned income. The credit phases down in 2023 when income exceeds USD 10 330 (17250 for married taxpayers) and phases out completely when income reaches USD 18 591 (25 511 for married taxpayers). In 2024, this credit is available for taxpayers at least 25 years old and less than 65.
- Relief for social security and other taxes: In 2024, the withholding rate for Social Security taxes and Medicare for employees is 7.65%. The earned income credits described above are sometimes considered an offset to Social Security and Medicare contributions made by eligible employees. Only a portion of Social Security benefits are subject to tax.

### **Main non-standard reliefs applicable to an AW**

The basic non-standard relief is the deduction of certain expenses to the extent that, when itemised, they exceed in aggregate the standard deduction. For the purposes of this Report, it is assumed that workers claim the standard deduction. The principal itemised deductions claimed by individuals where the standard deduction is not being claimed are:

- Medical and dental expenses that exceed 7.5% of income,
- State and local income taxes, real property taxes, and personal property taxes are capped at USD 10 000 per return,
- Home mortgage interest on up to USD 750 000 of qualified residence loans,
- Investment interest expense up to investment income with an indefinite carry forward of disallowed investment interest expense,
- Contributions to qualified charitable organisations (including religious and educational institutions),
- Personal casualty and theft losses due to a disaster to the extent that each loss exceeds USD 100 and that all such losses combined exceed 10% of income,
- Gambling losses up to the amount of gambling winnings, casualty and theft losses of income-producing property, and impairment related work expenses of disabled persons,
- Contributions to pension and life insurance plans. No relief is provided for employee contributions to employer-sponsored pension plans or for life insurance premiums. However, tax relief is provided for certain retirement savings.

In 2022 based on preliminary statistics<sup>1</sup>, the most recent year for which such statistics are available, the 10% of taxpayers with income between USD 50 000 and USD 100 000 (the AW range) who itemised their deductions claimed average deductions as follows: taxes paid, USD 7 086; charitable contributions, USD 6 135; home mortgage interest expense, USD 9 549.

### *Tax schedule*

## **Federal Income Tax rates**

Taxable Income Bracket (USD) <sup>1</sup>			Marginal Tax Rate (%)
Single Individual	Joint Return of Married Couple	Head of Household	
0 to 11 600	0 to 23 200	0 to 16 550	10
11 601 to 47 150	23 201 to 94 300	16 551 to 63 100	12
47 150 to 100 525	94 301 to 201 050	63 101 to 100 500	22
100 526 to 191 950	201 051 to 383 900	100 501 to 191 950	24

609 351 and over	731 200 and over	609 351 and over	37

1. The taxable income brackets are indexed for inflation.

There is a 3.8% tax on the lesser of certain net investment income or income in excess of USD 200 000 (USD 250 000 for joint returns). Net investment income includes interest, dividends, capital gains, rental and royalty income, and income from businesses trading financial instruments.

Owners of sole proprietorships, partnerships, S corporations, and some trusts and estates are eligible to deduct up to 20 percent of qualified business income (QBI). QBI is subject to limitations, depending on the taxpayer's taxable income, based on factors that may include the type of trade or business, the amount of wages paid by the business and the unadjusted basis of qualified property held by the trade or business.

## **State and local income taxes**

### *General description of the system*

The District of Columbia and 41 of the 50 States impose some form of a general individual income tax.<sup>2</sup> In addition, some local governments (cities and counties) impose an individual income tax, although this is not generally the case. State individual income tax structures use definitions of taxable income that are broadly similar to their analogues in the federal tax system with some appropriate adjustments. This linkage is not a legal requirement but a practical convention that functions for the convenience of the taxpayer who must fill out both federal and State income tax returns.

The Taxing Wages calculations assume that the average worker lives in Detroit, Michigan. The state of Michigan permits a personal exemption of USD 5 600 for the taxpayer, the taxpayer's spouse and each child, and taxes income at the rate of 4.25%. Michigan allows taxpayers who are eligible to claim the federal earned income tax credit to claim a Michigan earned income tax credit. The Michigan earned income tax credit is a refundable (non-wastable) credit equal to 30% of the federal earned income tax credit.

The city of Detroit permits a personal exemption of USD 600 and taxes income at the rate of 2.4%.

## Compulsory Social Security Contributions to Schemes Operated within the Government Sector

### ***Employees' contributions***

#### *Pensions*

In 2024, the rate for employee contributions is 7.65% (6.2% for old age, survivors, and disability insurance, and 1.45% for old age hospital insurance). The 6.2% rate applies to earnings up to USD 168 600. Beginning in 1994, there is no limit on the amount of earnings subject to the 1.45% rate. There is an additional 0.9% tax on employee wages and salaries that exceed USD 200 000 (USD 250 000 for joint returns) as the additional hospital insurance tax on high-income taxpayers. The additional tax on wages and salaries is subject to withholding (but without regard to the earnings of the spouse) when wages from a particular job exceed USD 200 000 per year. These thresholds are not indexed for inflation.

There is no distinction by marital status or sex.

#### *Other*

No compulsory employee contributions exist.

### ***Employers' contributions***

#### *Pensions*

The rate for employers' contributions is 6.2% on earnings up to USD 168 600 and 1.45% of all earnings (without limit).

#### *Unemployment*

Employers are required by the federal government to pay unemployment tax of 6% on earnings up to USD 7 000. Taxes are also paid to various state-sponsored unemployment plans which may generally be credited against the required federal percentage. In 2022 the estimated average unemployment insurance tax rate in Michigan was 2.94% of the first USD 9 500 of wages. The Taxing Wages model considers that the Federal government allows employers to take a credit for state unemployment taxes of up to 5.4%, resulting in a net Federal tax of 0.6% on earnings up to USD 7 000.

## Universal Cash Transfers

### ***Transfers related to marital status***

None.

### ***Transfers for dependent children***

No general cash transfers exist, although low-income mothers qualifying for categorical welfare grants may receive cash transfers.

## Principal Changes since 2017

In December 2017, Congress passed and the President signed the Tax Cuts and Jobs Act – the most significant change in U.S. tax law in a generation, incorporating change to the taxation of individuals and businesses. For individuals, the Act temporarily lowers income tax rates, increases the standard deduction, increases the child tax credit, and adds a credit for other dependents. The Act also temporarily eliminates some deductions, credits and exemptions for individuals. In addition, the individual alternative minimum tax (AMT) exemption and phase-out thresholds are temporarily increased so that fewer taxpayers are subject to the AMT. Pass-through entities that are generally taxed at the individual level only and may be eligible for a new temporary deduction. These temporary provisions expire at the end of 2025. In addition, inflation adjustments of amounts and thresholds are changed to be determined by the chained consumer price index. Finally, there are substantial changes in business taxation, many that are permanent, such as lowering the top corporate tax rate from 35 to 21 percent and moving the U.S. international tax system towards a territorial system.

See the Tax allowances and tax credits Section for a complete description of parameters and income thresholds.

## Memorandum Items

### *Identification of an AW at the wage calculation*

The AW is identified from monthly data compiled from establishment questionnaires covering more than 40 million non-agricultural full- and part-time workers. Beginning in March 2006, data on average weekly hours and average hourly earnings cover all employees rather than solely production or non-supervisory workers. To obtain average annual wages, the product of average weekly hours (including overtime) and average hourly earnings (including overtime) is multiplied by 52 and is adjusted to reflect a full-time equivalent worker. The AW is estimated to be USD 69 417 for 2024.

### *Employer contributions to private social security arrangements*

Employers commonly contribute to private pension plans (both defined benefit and defined contribution), health insurance and life insurance. Data for these contributions are available only on a total workforce basis. It is not possible to state with accuracy the levels applicable to the AW. The following are estimates for 2022 for civilian employees<sup>1</sup>:

	Pension <sup>1</sup>	Health <sup>2</sup>	Life <sup>1</sup>
% of workers covered	56	57	60
USD employer portion per covered employee	n.a.	16 141 (family) 6 241 (single)	n.a.

1. A change in methodology and data beginning this year results in a shift upward of premium levels before considering inflation. Civilian employees include those employed in the private sector and in the state/local government sector.

2. Pension and Life Insurance Information is from the National Compensation Survey: Employee Benefits in the United States, March 2023; U.S. Bureau of Labor Statistics.

3. Health Insurance information is from the Medical Expenditure Panel Survey (MEPS); U.S. Department of Health and Human Services.

## 2024 Tax equations

The equations for the US system in 2024 are mostly calculated on a family basis. There is a special function EIC which is used to calculate the earned income credit. Variable names are defined in the table of parameters above, within the equations table, or are the standard variables “married” and “children”. A reference to a variable with the affix “\_total” indicates the sum of the relevant variable values for the principal and spouse. And the affixes “\_princ” and “\_spouse” indicate the value for the principal and spouse, respectively. Equations for a single person are as shown for the principal, with “\_spouse” values taken as 0.

	Line in country table and intermediate steps	Variable name	Range	Equation
1.	Earnings	earn		
2.	Allowances:	tax_al	J	IF(Married, Married_al, IF(Children=0, single_al, hh_al))
3.	Credits in taxable income	taxbl_cr	J	0
4.	CG taxable income	tax_inc	J	positive(earn-tax_al+taxbl_cr)
5.	CG tax before credits	CG_tax_excl	J	Tax(tax_inc, IF(Married, Fed_sch_m, IF(Children, Fed_sch_h, Fed_sch_s)))
6.	6. Tax credits :	EIC	J	EIC(Children, earn_total, EIC_sch)
		ch_crd_max	J	(Positive((chcrd_rdn_lim*Children)-(chcrd_rdn*Positive(TRUNC(earn,-3)-IF(Married>0,chcrd_thrsh_m,chcrd_thrsh_oth))/1000))+Positive(((Children*chcrd_max)-(chcrd_rdn_lim*Children)-(chcrd_rdn*Positive(TRUNC(earn,-3)-IF(Married>0,chcrd_thrsh1_m,chcrd_thrsh1_oth))/1000))))*(Children>0)
		tax_cr	J	EIC+ch_crd
7.	CG tax	CG_tax	J	CG_tax_excl-tax_cr
8.	State and local taxes	local_tax	J	Detroit_rate*Positive(earn_total-Detroit_ex*(1+Married+Children))+Mich_rate*Positive(earn_total-Mich_ex*(1+Married+Children)-Mich_ex_child*Children)-MIN(Mich_cr_max, Tax(AJ7, Mich_cr_sch))-Mich_EIC_rate*EIC
9.	Employees' soc security	SSC	B	pens_rate_ee*MIN(earn, pens_ceil)+hosp_rate*earn+add_hosp_rate*Positive(earn-IF(Married,add_hosp_thresh_m,add_hosp_thresh_oth))
11.	Cash transfers			
13.	Employer's soc security	SSC_empr	B	pens_rate_er*MIN(earn, pens_ceil)+hosp_rate*earn+MIN(earn,Unemp_max)*Unemp_rate+MIN(earn,Mich_unemp_max)*Mich_unemp_rate
	Memorandum item: non-wastable tax credits			
	tax expenditure component	taxexp		(rate_rd_crd+EIC)-transfer
	cash transfer component	transfer		IF(CG_tax<0, -CG_tax, 0)

Key to range of equation B calculated separately for both principal earner and spouse P calculated for principal only (value taken as 0 for spouse calculation) J calculated once only on a joint basis.

## Notes

<sup>1</sup> Due to the Tax Cuts and Jobs Act, beginning in 2017 fewer individual taxpayers itemize deductions than under prior law but instead use the standard deduction.

<sup>2</sup> New Hampshire taxes only interest and dividend income received by individuals. Tennessee eliminated their interest and dividend income tax beginning in tax year 2021.

# Annex A. Methodology and limitations

## Methodology

### *Introduction*

The personal circumstances of taxpayers vary greatly. This Report adopts a specific methodology to produce comparative statistics covering taxes, benefits and labour costs across OECD member countries.<sup>1</sup> The framework of the methodology is as follows:

- The Report focuses on eight household types which vary by composition and level of earnings.
- Each household contains a full-time adult employee working in one of a broad range of industry sectors of each OECD economy. Some of the households also have a spouse working less than full-time.
- The annual income from employment is assumed to be equal to a given fraction of the average gross wage earnings of these workers.
- Additional assumptions are also made regarding other relevant personal circumstances of these wage earners in order to calculate their tax/benefit position.

The guidelines described in the following paragraphs form the basis for the calculations shown in Parts I and II of this Report. Table A A.1 sets out the terminology that is used. Where a country had to depart from the guidelines, this is noted in the text and/or in the country chapters contained in Part II of the Report. The proportion of taxpayers with the defined characteristics and the average wage differ between OECD economies.

### *Taxpayer characteristics*

The eight household types identified in the Report are set out in Table A A.2. Any children in the household are assumed to be aged between six and eleven inclusive.

The household is assumed to have no income source other than from employment and cash benefits.

### *The range of industries covered*

The standard assumption for calculating average wage earnings is based on Sectors B-N of the International Standard Industrial Classification of All Economic Activities (ISIC Revision 4, United Nations)<sup>2</sup> (see Table A A.3. International Standard Industrial Classification of All Economic Activities). Many countries have now adopted this approach (for more detailed country information, see Table 1.8).

Table A A.1. Terminology

General terms	
Average worker (AW)	An adult full-time worker in the industry sectors covered whose wage earnings represent the average for workers.
Single persons	Unmarried men and women.
Couple with two children	Married couple with two dependent children between six to eleven years of age inclusive.
Labour costs	The sum of gross wage earnings, employers' social security contributions and payroll taxes.
Net take-home pay	Gross wage earnings less the sum of personal income tax and employee social security contributions plus cash transfers received from general government.
Personal average tax rate (tax burden)	The sum of personal income tax and employee social security contributions expressed as a percentage of gross wage earnings.
Tax wedge	The sum of personal income tax, employee and employer social security contributions plus any payroll tax less cash transfers expressed as a percentage of labour costs.
Elasticity of income after tax	Percentage change in 'after-tax' income following an increase in one currency unit of income before tax (defined more precisely as one minus a marginal tax rate divided by one minus a corresponding average tax rate).
Terms used under the income tax	
Tax reliefs	A generic term to cover all the means of giving favourable income tax treatment to potential taxpayers.
Tax allowances	Amounts deducted from gross earnings to arrive at taxable income.
Tax credits	Amounts which a taxpayer may subtract from his tax liability. They are described as payable if they can exceed tax liability (sometimes the terms 'refundable' and 'non-wastable' are used).
Standard tax reliefs	Reliefs unrelated to the actual expenses incurred by taxpayers and automatically available to all taxpayers who satisfy the eligibility rules specified in the legislation are counted as standard reliefs. These also include deductions for compulsory social security contributions.
Basic relief	Any standard tax relief available irrespective of marital or family status.
Marriage allowance	Additional tax relief given to married couples. (In some countries, this is not distinguished from the basic relief which may be doubled on marriage).
Non-standard tax reliefs	Reliefs wholly determined by reference to actual expenses incurred.
Average rate of income tax	Amount of income tax payable after accounting for any reliefs calculated on the basis of the tax provisions covered in this Report, divided by gross wage earnings.
Schedule rate	The rate which appears in the schedule of the income tax and in the schedule of social security contributions.
Terms used under cash transfers	
Cash transfers	Cash payments made by general government (agencies) paid to families usually in respect of dependent children.

Table A A.2. Characteristics of taxpayers

Marital status	Children	Principal earner	Second earner
Single individual	No children	67% of average earnings	
Single individual	No children	100% of average earnings	
Single individual	No children	167% of average earnings	
Single individual	2 children	67% of average earnings	
Married couple	2 children	100% of average earnings	
Married couple	2 children	100% of average earnings	67% of average earnings
Married couple	2 children	100% of average earnings	100% of average earnings
Married couple	No children	100% of average earnings	67% of average earnings

Revision 4 (ISIC Rev.4)	
A	Agriculture, forestry and fishing
B	Mining and quarrying
C	Manufacturing
D	Electricity, gas, steam and air conditioning supply
E	Water supply; sewerage, waste management and remediation activities
F	Construction
G	Wholesale and retail trade; repair of motor vehicles and motorcycles
H	Transportation and storage
I	Accommodation and food service activities
J	Information and communication
K	Financial and insurance activities
L	Real estate activities
M	Professional, scientific and technical activities
N	Administrative and support service activities
O	Public administration and defence; compulsory social security
P	Education
Q	Human health and social work activities
R	Arts, entertainment and recreation
S	Other service activities
T	Activities of households as employers; undifferentiated goods- and services-producing activities of households for own use
U	Activities of extraterritorial organizations and bodies

This approach broadly corresponds to the previous calculation based on sectors C-K incl. defined in the International Standard Industrial Classification of All Economic Activities (ISIC Revision 3.1, United Nations) which was adopted in the 2005 edition of *Taxing Wages*. The reasons for moving to a broadened average wage definition were set out in the Special Feature of *Taxing Wages 2003-2004*.

### **Defining gross wage earnings**

This section sets out the assumptions underlying the calculation of the average earnings of 'the average worker'. The gross wage earnings data have been established using statistical data and the methodologies for calculating the earnings data in each country are set out in Table A A.4. Further information on the

calculation of the earnings figures is provided in the country chapters in Part II. The sources of the statistical data for each country are set out in Table A A.5.

The main assumptions are as follows:

- The data relate to the average earnings in the relevant industry sectors for the country as a whole.
- The calculations are based on the earnings of a full-time adult worker (including both manual and non-manual). They relate to the average earnings of all workers in the industry sectors covered. No account is taken of variation between males and females or due to age or region.
- The worker is assumed to be employed full-time during the entire year without breaks for sickness or unemployment. However, several countries are unable to separate and exclude part-time workers from the earnings figures (see Table A A.4). Most of them report full-time equivalent wages in these cases. In four countries (Chile, Ireland, Slovak Republic and Türkiye), the wages of part-time workers can be neither excluded nor converted into full-time equivalents because of the ways in which the earnings samples are constructed. As a result, average wages reported for these countries will be lower than an average of full-time workers (for example, an OECD Secretariat analysis of available Eurostat earnings data for selected European countries has shown that full-time employees' earnings in 2014 were on average 12% higher than earnings of all employees and 4% higher than earnings of all employees expressed in full-time equivalent units). Also, in most of the OECD countries where sickness payments are made by the employer, either on behalf of the government or on behalf of private sickness schemes, these amounts are included in the wage calculations. It is unlikely that this has a marked impact on the results since employers usually make these payments during a short period and the amounts usually correspond very closely to normal hourly wages.
- The earnings calculation includes all cash remuneration paid to workers in the industries covered taking into account average amounts of overtime, cash supplements (e.g. Christmas bonuses, thirteenth month) and vacation payments typically paid to workers in the covered industry sectors. However, not all countries are able to include overtime pay, vacation payments and cash bonuses according to the definition.
- The earnings figures include supervisory and/or management employees, though some countries are not able to do this. In such countries, the reported averages are lower than would otherwise be the case (for example, an OECD Secretariat analysis of available Eurostat earnings data for selected European countries has shown that excluding this type of workers can reduce average earnings by 10%-18%).
- Fringe benefits – which include, for example, provision of food, housing or clothing by the employer either free of charge or at below market-price – are, where possible, excluded from the calculation of average earnings. This could affect comparability of tax wedges as the reliance on fringe benefits may vary between countries and over time. However, the lack of comparability is limited as fringe benefits rarely account for more than 1%-2% of labour costs and are normally more common among high-income employees than in the income range covered by *Taxing Wages* (50% to 250% of average earnings). Table A A.4 shows that some Member countries are not able to exclude fringe benefits from the earnings figures reported and used in *Taxing Wages*. The decision to exclude fringe benefits has been taken because:
  - these types of benefits are difficult to evaluate in a consistent way (they may be valued at the actual cost to the employer, their value to the employee or their fair market value).
  - in most countries, they are of minimal importance for workers at the average wage level.
  - the tax calculations would be significantly more complicated if the tax treatment of fringe benefits were to be incorporated.

- Employers' contributions to private pension, family allowance or health and life insurance schemes are excluded from the calculations, though the amounts involved can be significant. In the United States, for example, these contributions can account for more than 5% of the earnings of employees. The country chapters in Part II indicate the existence of schemes that may be relevant for a worker earning the average wage.

Table A A.4. Method used to calculate average earning

Notes: Exc = Excluded, Inc = Included, '-' = information not available.

1. Usually includes compensation paid by employer whether paid on behalf of the government or as part of a private sickness scheme.
2. Excludes profit sharing bonuses in Greece and the United States plus end of year bonuses in the United States.
3. Sickness payments are only included to the extent that they are paid by the employer. For manual workers, this is only the case during the first three days of sick leave, while payments for the fourth day onwards are made by INPS.
4. Partly: the (small) taxable part of fringe benefits is included.
5. Except for top management (Finland); except if income from profits exceeds 50% of total income (Hungary); except for sole proprietors (New Zealand); only income earned based on a standard employment contract is included (Slovak Republic).
6. Part-time wages are converted to full-time equivalents before calculating the average wage measure. For the Slovak Republic, part-time workers with non-standard temporary employment contracts are excluded.

Table A A.5. Source of earnings data, 2023

Country	Type of sample	Source
Australia	Quarterly survey of firms resulting in a representative sample of wage and salary earners in each industry.	Australian Bureau of Statistics "Average Weekly Earnings, Australia" and "Labour Force, Australia".
Austria	Annual Wage Tax Statistics.	"Lohnsteuerstatistik".
Belgium	Data collected or estimated on the basis of an annual establishment survey and social insurance registers of employees.	Statistics Division of the Ministry of Economy (Federal Public Service, Economy, SMEs, Self-employed and Energy). Same source as for Eurostat "Annual gross earnings" data.
Canada	Annual household survey	Statistics Canada, "Survey of Labour and Income Dynamics" and "Canadian Income Survey"
Chile	Monthly sample of businesses with 10+ employees.	National Statistics Institute of Chile (INE).
Colombia <sup>1</sup>	The Great Integrated Household Survey	National Administrative Department of Statistics (DANE)
Costa Rica	Salaries and total number of workers by salary scale and institutional sector.	Actuarial and Economic Management. Statistics Area. "Caja Costarricense del Seguro Social" (CCSS)
Czechia	Employer survey data.	National Statistical Office.
Denmark	Danish Employers Confederation survey of earnings.	Annual Report Danish Employers Confederation (Dansk Arbejds Giverforening).
Estonia	-	Statistics Estonia/Ministry of Finance.
Finland	(1) Finnish Employers Federation survey of hourly and monthly earnings; (2) Survey for unorganized employers "Structure of Earnings Statistics" published by the Central Statistical Office.	"Wages Statistics" published by the Central Statistical Office.
France	Social insurance registers covering all employers.	INSEE, "Déclarations Sociales Nominatives" (DSN).
Germany	Survey carried out by the Federal Statistical Office.	National Statistical Office.
Greece	Survey carried out by National Statistics Service and Social Security Institutions.	National Statistical Service Labour Statistics. Same source as for Eurostat "Annual gross earnings" data.
Hungary	Monthly surveys among enterprises with at least five employees.	Central Statistical Office.
Iceland	Monthly survey of earnings in the private sector market.	Statistics Iceland.
Ireland	Quarterly surveys of industrial employment, earnings and hours worked.	Central Statistics Office.
Israel	-	Central Bureau of Statistics.
Italy	Quarterly indicators of wages in industry and services (OROS).	National Institute of Statistics.
Japan	Basic survey on wage structure of all establishments with more than 10 employees.	Ministry of Health, Labour and Welfare, Annual Report.
Korea	Labour Force Survey at Establishments.	Ministry of Employment and Labour.
Latvia	Average monthly wages and salaries (DSG01)	The Latvian Central Statistical Bureau.
Lithuania	-	Statistics Lithuania.
Luxembourg	Monthly aggregated files of Social security services.	National Statistical Office and Social Security Services.
Mexico	Administrative data from the Mexican Social Security Institute (Instituto Mexicano del Seguro Social [IMSS]).	The National Minimum Wage Commission (Comisión Nacional de Salarios Mínimos (CONASAMI)).
Netherlands	Survey "Employment and Wages".	Central Bureau of Statistics, Statline.
New Zealand	The quarterly employment survey is a sample survey of significant business with an employment count of 1 or more.	Statistics New Zealand INFOS.

Norway	Sample of enterprises based on published sector statistics for 3rd quarter – except agriculture, forestry and fishing and private households.	Statistics Norway Wage.
Portugal	National Accounts (Contas Nacionais).	National Statistics Institute (INE).
Poland	Estimates for different sectors.	Monthly Statistical Bulletin.
Slovak Republic	Quarterly survey of employers.	Slovak Statistical Office.
Slovenia	Monthly survey of employees.	Statistical Office of the Republic of Slovenia.
Spain	Quarterly survey of firms.	Instituto Nacional de Estadística "Encuesta Trimestral de Coste Laboral" (Labour Cost Survey).
Sweden	September survey of Swedish employers.	Statistics Sweden.
Switzerland	Swiss Statistics Office. Personnes actives occupées selon la branche économique.	La vie économique, SECO (Secrétariat d'État à l'économie) table B.8.1, <a href="http://www.bfs.admin.ch/bfs/portal/fr/index/themen/03/04.html">http://www.bfs.admin.ch/bfs/portal/fr/index/themen/03/04.html</a> .
Türkiye	Annual Manufacturing Industry Survey.	Turkish Statistical Institute.
United Kingdom	1% sample of PAYE earnings.	Office for National Statistics, Annual Survey of Hours and Earnings (ASHE).
United States	Monthly surveys by Department of Labour on the basis of a questionnaire covering more than 40 million non-agricultural wage and salary-workers.	Employment, Hours, and Earnings from the Current Employment Statistics Survey.

Note: 1. In Colombia, the Great Integrated Household Survey has been adjusted from 2021 to incorporate the sampling frame of the National Census of Population and Housing of 2018, thereby changing the sampling frame of the 2005 census. As a result, the 2022 and 2023 average wage figures are not comparable with the figures reported up to 2021. The 2021 figure was computed through a splicing process based on the per capita income of the expenditure unit, not on labour income.

### Calculating average gross wage earnings

Table A A.4 indicates the basic calculation method used in each country while more details are, where relevant, provided in the country chapters in Part II. In principle, countries are recommended to calculate annual earnings by referring to the average of hourly earnings in each week, month or quarter, weighted by the hours worked during each period, and multiplied by the average number of hours worked during the year, assuming that the worker is neither unemployed nor sick and including periods of paid vacation. A similar procedure was recommended to calculate overtime earnings. For countries unable to separate out part-time employees from the data, it is recommended that earnings of part-time employees should if possible be converted into their full-time equivalents.

Statistical data on average gross wage earnings in 2024 were not available when the current Report was written. For most countries, estimates of gross wage earnings of average workers in 2024 were therefore derived by the Secretariat on the basis of a uniform approach: year 2023 earnings levels are multiplied by the country-specific annual percentage change of wages for the whole economy reported in the most recently published edition of the OECD *Economic Outlook* (i.e. *OECD Economic Outlook Volume 2024 Issue 2*). This transparent procedure is intended to avoid any bias in the results. In some countries, there were varying approaches:

- The final 2024 average gross wage earnings were used for Australia.
- National estimates were used for Chile, Colombia, Costa Rica, New Zealand and Türkiye as the *OECD Economic Outlook Volume 2024 Issue 2* did not provide percentages changes in wages for those countries.
- In some countries, average wage earnings were also estimated for prior years – Canada (2023), Ireland (2023), Portugal (2022 and 2023) and Switzerland (2007, 2009, 2011, 2013, 2015, 2017, 2019, 2021 and 2023) as no country information on average wage earnings levels was available for these years.

Eighteen OECD countries have opted to provide national estimates of the level of gross wage earnings of average workers in 2024. These estimates were not used in the *Taxing Wages* calculations (except for the

countries listed above) because of potential inconsistency with the Secretariat estimates derived for other countries. However, they are included in Table A A.6 to enable comparisons to be made between the estimates obtained by applying the Secretariat formula and those from national sources. In most cases, the two categories are fairly close.

**Table A A.6. Estimated gross wage earnings, 2023-2024 (in national currency)**

	Average wage 2023	Average wage 2024 (Secret. estimates)	Average wage 2024 (country estimates)	EO 2024 (Issue 2) forecasted rates for 2024 <sup>1</sup>
Australia <sup>1</sup>	99 565		103 794	3.5
Austria	56 928	61 699	61 368	8.4
Belgium	58 913	60 841		3.3
Canada	85 347	88 360		3.5
Chile <sup>1</sup>	13 163 425		14 074 320	
Colombia <sup>1</sup>	27 115 878		30 236 442	
Costa Rica <sup>1</sup>	8 969 097		9 109 145	
Czechia	518 383	549 741	551 560	6.0
Denmark	489 600	509 093		4.0
Estonia	22 559	23 930		6.1
Finland	52 907	52 893		0.0
France	43 600	44 968	44 951	3.1
Germany	60 428	63 288		4.7
Greece	24 059	25 198		4.7
Hungary	7 303 812	8 252 579	8 151 054	13.0
Iceland	11 220 000	11 811 028	11 949 000	5.3
Ireland	61 347	64 158		4.6
Israel	190 584	196 756	198 780	3.2
Italy	34 277	35 616		3.9
Japan	5 273 732	5 426 969		2.9
Korea	53 667 996	55 002 302		2.5
Latvia	18 396	20 176	19 644	9.7
Lithuania	23 807	25 757	26 079	8.2
Luxembourg	72 943	74 296		1.9
Mexico <sup>2</sup>	191 322	199 946	208 049	4.5
Netherlands	62 110	65 782		5.9
New Zealand <sup>1</sup>	76 001		80 019	
Norway	727 626	763 733	765 462	5.0
Poland	86 106	96 421		12.0
Portugal	21 000	22 588		7.6
Slovak Republic	17 239	18 529	18 428	7.5
Slovenia	25 914	27 756	27 235	7.1
Spain	30 250	31 698		4.8
Sweden	516 511	537 302		4.0
Switzerland	97 364	99 430		2.1
Türkiye <sup>1</sup>	310 667		568 151	
United Kingdom	49 199	51 310		4.3
United States	67 729	70 627		4.3

Notes:

1. The country average wage estimate is used instead of the OECD Secretariat's average wage estimate in the *Taxing Wages* calculations.
2. National average wage estimates differ from the OECD estimates as the OECD estimates do not include the impact of the Labour Outsourcing Reform 2021, which led to an increase of the base salary between 2020 and 2022.

### ***Coverage of taxes and benefits***

The Report is concerned with personal income tax and employee and employer social security contributions payable on wage earnings. In addition, payroll taxes (see section on Payroll taxes) are included in the calculation of the total wedge between labour costs to the employer and the corresponding net take-home pay of the employee.

The calculation of the after-tax income includes family benefits paid by general government as cash transfers (see section on Family cash benefits from general government). Income tax due on capital

income and non-wage labour income, several direct taxes (net wealth tax, corporate income tax) and all indirect taxes are not considered in this Report. However, all central, state and local government income taxes are included in the data.

In this Report, compulsory social security contributions paid to general government are treated as tax revenues. Being compulsory payments to general government they clearly resemble taxes. They may, however, differ from taxes in that the receipt of social security benefits depends upon appropriate contributions having been made, although the size of the benefits is not necessarily related to the amount of the contributions. Countries finance compulsory public social security programmes to a varying degree from general tax and non-tax revenue and earmarked contributions, respectively. Better comparability between countries is obtained by treating social security contributions as taxes, but they are listed under a separate heading so that their amounts can be identified in any analysis.

The Report covers the personal income tax, employee and employer social security and cash benefits regulations that are applied during the whole tax year. Any changes that occur during the tax year are taken into account in the *Taxing Wages* calculations.

### *Calculation of personal income taxes*

The method by which income tax payments are calculated is described in the country chapters in Part II. First, the tax allowances applicable to a taxpayer with the characteristics and income level related to gross annual wage earnings of an average worker are determined. Next, the schedule of tax rates is applied and the resulting tax liability is reduced by any relevant tax credits. An important issue arising in the calculation of the personal income tax liability involves determining which tax reliefs should be taken into account. Two broad categories of reliefs may be distinguished:

- **Standard tax reliefs:** Reliefs that are unrelated to actual expenditures incurred by the taxpayer and are automatically available to all taxpayers who satisfy the eligibility rules specified in the legislation. Standard tax reliefs are usually fixed amounts or fixed percentages of income and are typically the most important set of reliefs in the determination of the income tax paid by workers. These reliefs are taken into account in the calculations. They include:
  - The basic relief which is fixed and is available to all taxpayers or all wage earners, irrespective of their marital or family status;
  - The standard relief which is available to taxpayers depending on their marital status;
  - The standard child relief granted to a family with two children between the ages of six to eleven inclusive;
  - The standard relief in respect of work expenses, which is usually a fixed amount or fixed percentage of (gross) wage earnings; and,
  - Tax reliefs allowed for social security contributions and other (sub-central government) income taxes are also considered as standard reliefs since they apply to all wage earners and relate to compulsory payments to general government.
- **Non-standard tax reliefs:** These are reliefs that are wholly determined by reference to actual expenses incurred. They are therefore neither fixed amounts nor fixed percentages of income. Examples of non-standard tax reliefs include reliefs for interest on qualifying loans (e.g. for the purchase of a house), private insurance premiums, contributions to private pension schemes, and charitable donations. These are not taken into account in calculating the tax position of employees.

Standard reliefs are separately identified and their impact on average tax rates is calculated in the results tables shown in the country chapters. The latter include a brief description of the main non-standard reliefs in most cases.

## ***State and local income taxes***

Personal income taxes levied by sub-central levels of government – state, provincial, cantonal or local – are included in the scope of this study. State income taxes exist in Canada, Switzerland and the United States. Since 1997, Spain has an income tax for the Autonomous Regions. Local income taxes are imposed in Belgium, Denmark, Finland, France, Iceland, Italy, Japan, Korea, Norway, Sweden, Switzerland and the United States. In Belgium, Canada (other than Quebec), Denmark, Iceland, Italy, Korea, Norway and Spain, they are calculated as a percentage of taxable income or of the tax paid to central government. In Finland, Japan, Sweden and Switzerland, local government provides different tax reliefs from central government. In the United States, the sub-central levels of government operate a separate system of income taxation under which they have discretion over both the tax base and tax rates. Except for Canada, Spain and Switzerland, the schedule of these sub-central taxes consists of a single rate.

When tax rates and/or the tax base of sub-central government income taxes vary within a country, it is sometimes assumed that the average worker lives in a typical area and the income taxes (and benefits) applicable in this area are presented. This is the procedure followed in Canada, Italy, Spain, Switzerland and the United States, where the tax base and tax rates vary very widely across the country. Belgium, Denmark, Finland, Iceland and Sweden have preferred to select the average rate of sub-central government income taxes for the country as a whole. In the case of France, the local tax rates, which vary widely depending on the municipalities, are not assessed and are not included in the *Taxing Wages* calculations. The local rates do not vary in practice in Korea and Norway. Japan has used the widely prevalent standard schedule.

## ***Social security contributions***

Compulsory social security contributions paid by employees and employers to general government or to social security funds under the effective control of government are included in the coverage of this Report. In most countries, contributions are levied on gross earnings and earmarked to provide social security benefits. In Finland, Iceland and the Netherlands, some contributions are levied as a function of taxable income (i.e. gross wage earnings after most/all tax reliefs). Australia, Denmark and New Zealand do not levy social security contributions.

Contributions to social security schemes outside the general government sector are not included in the calculations. However, information on “non-tax compulsory payments” as well as “compulsory payment indicators” is included in the OECD Tax Database, which is accessible at <http://www.oecd.org/tax/tax-policy/tax-database/>.

## ***Payroll taxes***

Payroll taxes have a tax base that is either a proportion of the payroll or a fixed amount per employee. In the OECD Revenue Statistics, payroll taxes are reported under heading 3000. Sixteen OECD countries report revenue from payroll taxes: Australia, Austria, Canada, Denmark, France, Hungary, Iceland, Ireland, Israel, Korea, Latvia, Lithuania, Mexico, Poland, Slovenia and Sweden.

Payroll taxes are included in total tax wedges reported in this publication, given that they increase the gap between gross labour costs and net take-home pay in the same way as income tax and social security contributions do. The main difference with the latter is that the payment of payroll taxes does not confer an entitlement to social security benefits. Also, the tax base of payroll taxes may differ from the tax base of employer social security contributions. For example, certain fringe benefits may only be liable to payroll tax. Because this Report presents the standard case, the payroll tax base can be – depending on the

relevant legislation – gross wage (excluding fringe benefits and other items of compensation that vary per employee), gross wage plus employer social security contributions, or a fixed amount per employee.

Six OECD member countries include payroll taxes in the *Taxing Wages* calculations: Australia, Austria, Latvia, Lithuania, Poland and Sweden. The other countries reporting payroll tax revenue in *Revenue Statistics* have not included these taxes in the calculations for the present Report for a variety of reasons.

### ***Family cash benefits from general government***

Tax reliefs and family cash transfers universally paid in respect of dependent children between the ages of six to eleven inclusive who are attending school are included in the scope of the study. If tax reliefs or cash transfers vary within this age range, the most generous provisions are adopted, except that the case of twins is explicitly disregarded. The implications of this are illustrated below, supposing the child benefit programme of a country is structured as follows:

Age group	Benefits per child
Children 6-8	100 units
Children 9-10	120 units
Children 11-14	150 units

The most favourable outcome arises in the case of 11-year-old twins: 300 units. However, as the case of twins is excluded, the best outcome (given that children are between 6 and 11) now becomes 270 units (one child 11 years old, one child 9 or 10 years old). This amount would be included in the country table. Often, the benefit amount increases as children grow older. The calculations assume that the children have been born on 1 January so the annual amount received in child benefits may be calculated from the benefit schedule that is in place at the start of the year with any revisions to these amounts during the year being taken into account.

Relevant cash payments are those received from general government. In some cases, the cash benefits include amounts that are paid without consideration to the number of children.

### ***Payable tax credits***

Payable (non-wastable) tax credits are tax credits that can exceed tax liability, where the excess, if any, can be paid as a cash transfer to the taxpayer. In principle, these credits can be treated in different ways according to whether they are regarded as tax provisions or cash transfers or a combination of these. The Special Feature in the 2016 edition of *Revenue Statistics* discusses these alternative treatments and the conceptual and practical difficulties that arise in deciding which is the most appropriate approach for the purpose of reporting internationally comparable tax revenue figures. It also provides figures which show the impact of different treatments on tax to GDP ratios (OECD, 2018<sup>[1]</sup>).

Based on this review, the Interpretative Guide of the *Revenue Statistics* requires that

- only the portion of a payable tax credit that is claimed to reduce or eliminate a taxpayer's liability (the 'tax expenditure' component)<sup>3</sup> should be deducted in the reporting of tax revenues;
- the part of the tax credit that exceeds a taxpayer's tax liability and is paid to the taxpayer (the 'cash transfer' component) should be treated as an expenditure item and not deducted in the reporting of tax revenues.

However, additional information is provided in *Revenue Statistics* on aggregate tax expenditure components and aggregate transfer components of payable tax credits to show the effect of alternative treatments.

In *Taxing Wages*, the situation is different as the full amount of the payable tax credit is taken into account in the income tax calculation.

Strict consistency with *Revenue Statistics* would require that only the tax expenditure component be offset against derived income tax, with the excess (if any) treated as a cash transfer. However, this approach would diminish rather than strengthen the informational content of the derived results in *Taxing Wages*. In particular, limiting tax credit claims to tax expenditure amounts would yield a zero income tax liability and zero average income tax rate where cash refunds are provided. Where tax credit claims are not constrained in this way, negative income tax liabilities and negative average income tax rates would result where cash transfers are provided. Arguably, these negative amounts more clearly convey the taxpayer's position (which is improved relative to the no-tax situation). Also, not including the cash transfer portion of payable tax credits in the 'cash transfers from general government' item of the country tables permits greater transparency of the latter which focuses on 'pure' cash transfers only.

In order to improve the informational content of country tables as regards payable tax credits, the memorandum item reporting at the bottom of the relevant country tables shows tax expenditure amounts on one line, with a second line showing cash transfer amounts. Where more than one payable tax credit programme applies, the figures represent aggregates covering all the programmes. Total programme costs in each of the household cases considered can be derived by adding the tax expenditure and cash transfer amounts.

### *The calculation of marginal tax rates*

In all except one case, the marginal tax rates are calculated by considering the impact of a small increase in gross earnings on personal income tax, social security contributions and cash benefits. The exception is the case of a non-working spouse, where the move from zero to a small positive income is unrepresentative of income changes and therefore of little interest. For this particular case, the marginal rates for the spouse are calculated by considering the impact of an income increase from zero to 67% of the average wage.

## Limitations

### *General limitations*

The simple approach of comparing the tax/benefit position for eight model household types avoids many of the conceptual and definitional problems involved in more complex international comparisons of tax burdens and transfer programmes. However, a drawback of this methodology is that the earnings of an average worker will usually occupy a different position in the overall income distribution in different economies, although the earnings relate to workers in similar jobs in various OECD Member countries.

Because of the limitations on the taxes and benefits covered in the Report, the data cannot be taken as an indication of the overall impact of the government sector on the welfare of taxpayers and their families. Complete coverage would require studies of the impact of indirect taxes, the treatment of non-wage labour income and other income components under personal income taxes and the effect of other tax allowances and cash benefits. It would also require that consideration be given to the effect on welfare of services provided by the state, either free or below cost, and the incidence of corporate and other direct taxes on earnings and prices. Such a broad coverage is not possible in an international comparison of all OECD countries. The differences between the results shown here and those of a full study of the overall impact on employees of government interventions in the economy would vary from one country to another. They would depend on the relative shares of different kinds of taxes in government revenues and on the scope and nature of government social expenditures.

The Report shows only the formal incidence of taxes on employees and employers. The final, economic incidence of taxes may be quite different, because the tax burden may be shifted from employers onto employees and vice versa by market adjustments to gross wages.

The income left at the disposal of a taxpayer may represent different standards of living in various countries because the range of goods and services on which the income is spent and their relative prices differ as between countries. In those countries where the general government sector provides a wide range of goods and services (generous basic old age pension, free health services, public housing, university education, et cetera), the taxpayer may be left with less cash income but may enjoy the same living standards as a taxpayer receiving a higher cash income but living in a country where there are fewer publicly provided goods and services.

### *Some specific limitations on the income tax calculation*

The exclusion of non-wage income and the limited number of tax reliefs covered mean that the average rates of income tax in the tables in this publication do not necessarily reflect the actual rates for taxpayers at these levels of earnings. Actual rates may be lower than the calculated rates because the latter do not take into account non-standard expense-related reliefs. On the other hand, actual rates may be higher than calculated rates because the latter do not take into account tax on non-wage income received by employees.

The decision not to calculate separately average rates of income tax taking into account the effect of non-standard tax reliefs was taken because:

- In many cases, expense-related reliefs are substitutes for direct cash subsidies. To take into account these reliefs while ignoring any corresponding direct subsidies would distort comparisons of take-home pay plus cash transfers;
- The special tax treatment of certain expenses may be linked to special treatment of any income associated with these expenses (e.g. the tax treatment of social security contributions and pension income) which is beyond the scope of this study;
- A few countries were unable to estimate the value of these reliefs and even those countries which could do so could not limit their estimates to taxpayers with the characteristics assumed in the above part on methodology; and,
- Not all countries could calculate separately the reliefs available to different household types. Where a split is provided between single individuals and families with children, there are large differences in the value of the reliefs typically received by these two categories of households.

### *Limitations to time-series comparisons*

The calculations of the tax burden on labour income in OECD countries reported in the 2004 and previous editions of *Taxing Wages*, are based on an average earnings measure for manual full-time workers in the manufacturing sector (the 'average production worker').

Any analysis of the results over time has to take into account the fact that the earnings data do not necessarily relate to the same taxpayer throughout the period. Average earnings are calculated for each year. As such, the results do not reflect the changing earnings and tax position of particular individuals over time but rather refer to the position of workers earning a wage equal to (a proportion of) average earnings in the covered industry sectors in each particular year. This, in turn, may mean that the earnings levels referred to may be at different points in the income distribution over the period covered, and changes in tax rates may be influenced by these trends.

The definition of the average worker has changed over time. From the 2005 edition, *Taxing Wages* has reported tax calculations under a broadened average worker definition that includes all full-time employees covering industry sectors C-K (reference to ISIC Rev.3.1). The implications of adopting this definition for time-series comparisons are discussed in the 2005 edition of *Taxing Wages*. Since the 2010 edition of the *Taxing Wages* Report, many countries have started reporting average wage earnings for full-time

employees covering industry sectors B-N of the ISIC Rev.4 industry classification (which broadly corresponds to sectors C-K in ISIC Rev.3.1).

## A note on the tax equations

Each country chapter contains a section describing in a standard format the equations under-pinning the calculations required to derive the amounts of income tax, social security contributions and cash transfers. These algorithms represent in algebraic form the legal provisions described in the chapter and are consistent with the figures shown in the country and comparative tables. This section describes the conventions used in the definition of the equations and how they could be used by those wishing to implement the equations for their own research.

The earlier sections of the country chapters describe how the tax and other systems work and present the values of the parameters of those systems such as the levels of allowances and credits, and the schedule of tax rates.

In the first part of the equations section is a table showing a brief description of each parameter (such as “Basic tax credit”), the name of the parameter as used in the algebraic equation (“Basic\_cred”) and the actual value for the relevant year (such as “1098”). Where there is a table of values – for example a schedule of tax rates and the associated thresholds of taxable income – a name is given to the entire table (for example “tax\_sch”). These variable names are those used in the equations.

After each table of parameters is the table of equations. The four columns contain information as follows:

- The first two columns give a description and a variable name for the result of the equation on that row of the table. These always include the thirteen main financial value entries in the country tables. Additional rows define any intermediate values which are calculated either to show the detail included in the tables (such as the subdivision of total tax allowances into the different categories) or values which make the calculation clearer.
- The third column shows the range of the calculation in that row. This is necessary to allow for the different way that tax may be calculated for married couples. The options are:
  - **B** The calculation is carried out separately for both the principal earner and the spouse using their individual levels of earnings. This applies in the case of independent income tax and usually also in respect of social security contributions.
  - **P** The calculation applies for the principal earner only. An example is where the principal earner can use any of the basic tax allowance of the spouse which cannot be set against the income of the spouse.
  - **S** The calculation applies for the spouse (i.e. second earner) at wage earnings equal to or lower than the principal earner’s wage earnings.
  - **J** The calculation is carried out only once on the basis of joint income. This applies to systems of joint or household taxation and is also usual for the calculation of cash transfers in respect of children.
- The final column contains the equation itself. The equation may refer to the variables in the parameters table and to variables which result from one of the rows of the equations table itself. Use is also made of the two standard variables “Married”, which have the value 1 if the household consists of a married couple and 0 in the case of a single individual, and “Children” which denotes the number of children. Sometimes there is a reference to a variable with the affix “\_total” which indicates the sum of the relevant variable values for the principal earner and the spouse. Similarly, the affixes “\_princ” and “\_spouse” indicate the value for the principal earner and spouse, respectively.

In the equations, a number of functions are used. Some of these are used in the same way as in a number of widely available 'spreadsheet' computer packages. For example,  $\text{MAX}(X,Y)$  and  $\text{MIN}(X,Y)$  find the maximum and minimum of the two values, respectively.  $\text{IF}(\text{condition } X,Y)$  chooses the expression  $X$  if the condition is true and the expression  $Y$  if it is false. Boolean expressions are also used and are taken to have the value 1 if true and 0 if false. As an example,  $(\text{Children}=2*\text{CB}_2)$  is equivalent to  $\text{IF}(\text{Children}=2, \text{CB}_2, 0)$ .

There are also three special functions commonly used which denote calculations often required in tax and social security systems. These are:

- **Tax (taxinc, tax\_sch):** This calculates the result of applying the schedule of tax rates and thresholds in "tax\_sch" to the value of taxable income represented by "taxinc". This function may be used in any part of the equations, not just in the income tax calculation. For some countries it is used for social security contributions or even for allowance levels which may be income dependent.
- **Positive (X):** This gives the result  $X$  when this value is positive and zero otherwise. It is therefore equivalent to  $\text{MAX}(0,X)$ .
- **Taper (value, income, threshold, rate):** This gives the amount represented by "value" if "income" is less than "threshold". Otherwise, it gives "value" reduced by "rate" multiplied by  $(\text{income} - \text{threshold})$ , unless this produces a negative result in which case zero is returned. This provides the calculation which is sometimes required when a tax credit, for example, is available in full provided that total income is below a threshold but is then withdrawn at a given rate for each currency unit in excess of the threshold until it is withdrawn completely.

In some circumstances, there are country specific special VBA functions. These VBA functions involve programming that is designed to simplify the tax calculations. The programming underlying these functions is based on the description of the particular measure given in the relevant country chapter found in Part II. For example, the Earned Income Credit in the United States is calculated using the VBA function called EIC.

Anyone wishing to make their own implementation of the equations will have to write VBA functions corresponding to these special functions or make appropriate modifications to any equations that use them.

## Notes

<sup>1</sup> The statistical data for Israel are supplied by and under the responsibility of the relevant Israeli authorities. The use of such data by the OECD is without prejudice to the status of the Golan Heights, East Jerusalem and Israeli settlements in the West Bank under the terms of international law.

<sup>2</sup> Not all national statistical agencies use ISIC Rev.3.1 or ISIC Rev.4 to classify industries. However, the Statistical Classification of Economic Activities in the European Community (NACE), the North American Industry Classification System (NAICS) and the Australian and New Zealand Standard Industrial Classification (ANZSIC) include a classification which is broadly in accordance with industries C-K in ISIC Rev.3.1 or industries B-N in ISIC Rev.4.

<sup>3</sup> In this case, the amount of tax relief is related to actual social security contributions paid by the employee or withheld from her/his wage – thus in this respect this item deviates from the general definition of standard tax relief under which relief is unrelated to actual expenses incurred.

# Taxing Wages 2025

## Decomposition of Personal Income Taxes and the Role of Tax Reliefs

This annual publication provides details of taxes paid on wages in OECD countries. This year's edition focuses on the decomposition of personal income taxes and the role of tax reliefs, which can take the form of tax allowances or tax credits on the taxes levied by different levels of government. For the year 2024, the report also examines personal income taxes and social security contributions paid by employees, social security contributions and payroll taxes paid by employers, and cash benefits received by workers. It illustrates how these taxes and benefits are calculated in each member country and examines how they impact household incomes. The results also enable quantitative cross-country comparisons of labour cost levels and the overall tax and benefit position of single persons and families on different levels of earnings. The publication shows average and marginal effective tax rates on labour costs for eight different household types, which vary by income level and household composition (single persons, single parents, one or two earner couples with or without children). The average tax rates measure the part of gross wage earnings or labour costs taken in tax and social security contributions, both before and after cash benefits, and the marginal tax rates the part of a small increase of gross earnings or labour costs that is paid in these levies.
